Today I'm reviewing the HP Deskjet 9650 wide format inkjet printer. This printer model is an old one which has been surpassed in model numbers and quality many times since its day in the sun.

Luckily the person I purchased it from took very good care of it, because HP certainly didn't, that's right no Windows 7 support from HP for this printer line. HP has deemed that the HP 9800 drivers from an old update would be sufficient to power this printer into its last years the windows XP drivers for the 9650 do work in Windows 7 but are missing the critical printer tools needed to align the print heads, clean the old ink from the cartridges, and other maintenance items, HP claims that installing new print cartridges causes the printer to auto align, but that is spotty and more times than not the alignment is off. The 9800 drivers have the service items in the drivers but getting things to print properly with them is hit and miss a ratio around 50% which wastes too much ink, and we all know that HP printer ink is actually more expensive ounce for ounce than crude oil my solution to this is to run both drivers but only install the 9800 drivers when you need to do those maintenance items that the 9600 software doesn't provide then uninstall them as both drivers together can cause printing errors. Other than these items this is a great printer for someone who needs the extra width for printing items like 12x12 scrapbook pages as my wife does. The color quantity can be surprising in a good way and there are still modules out there that allow unattended

doublesided printing. When I received the printer, I loaded the recommended driver and all was ok. But I wasn't completely satisfied with the results. But for 35 bucks, what the heck, I got a cheap printer with large format capability. Then a week or so after, when I had some free time. I figured I'd investigate what other options I had to get the optimum print capabilities from this printer. The solution was simple. I run my X58 based computer with 12Gs of RAM with a 64 bit version of Windows 7 Ultimate. But I also have the Windows Virtual Version of XP 32 bit loaded in it. I use Acad 2000, 32 bit in this mode.

Well now, I have this printer with its original driver for the 9600 series printers, and it runs great. I loaded my old version of Photoshop, an alternate version driver for my video card, so now I can run my Virtual Windows XP as if it was a new XP machine with high color, high ram, high PC processing. With Acad 2000, and Photoshop 8, the photo quality is outstanding. I have owned a lot of inkjet printers and this is one of the best. It's fast, the drivers are stable, and it has never jammed. Right now I own 3 printers, the HP 7550 three cartridge printer, the HP 7150 two cartridge and the HP 9650 wide format, two cartridge. I don't know what the specs are but the 9650 is the fastest of the three. I love the fact that you can print on 13x19 paper. I have never had a problem with the drivers or software. Nothing frustrates me more than poorly written drivers that lock up on you or behave erratically. The HP drivers are stable. My first one gave me many years of literally troublefree service, so I went on the hunt for another wideformat printer. I looked at the newer versions of HP wide format printers but their construction did not look as sturdy. I found a reconditioned HP9650 on Ebay for a very good price and it is a great unit as well. If you need to print 11 x 17 documents, spreadsheets, or small banners, etc. I bought this so that I could print out Architectural drawings on 11X17 paper. This the printer does very well. It will also continue to function with one of its ink cartridges empty. I bought this printer, since I needed a replacement for the same model, which I thought I had worked to death. I occasionally need a wide format print, and have been happy with the print quality, both of which are very important to me, since I do some commercial work. I was happy to find this at a very reasonable price point. I always have HP printer for easy Mac Apple OS driver. This HP Deskjet 9650 was already setup in my Mac. Just plug and print right away.

If you press it, it will just feed through a blank sheet, with no print on it, and continue to flash. Where can I get a service manual for this printer. Thanks, Lisa Then resend the print job. To check the system, see the guidelines in "Troubleshooting". Use alcohol and a Q Tip or a paper coffee filter. You need a good connection there. 3 With a pair of needle nose pliers, very carefully bend the prongs outward just a tad so they make a better contact with the circuit board. Be careful not to pull them out of their holders. 4 Put the panel back on. If it is loose happens over time use strapping tape to hold it on. 5 Now reboot computer with printer on. Worked for me so good luck.
