Not opening as it is stuck on where it says high Answer questions, earn points and help others. NB Heat loss occurs through the viewing window in the top of the machine; so we recommend for everyone to put a few layers of Aluminium foil over the window. Hints Use lukewarm water in winter as the machines do not have a prekneading warming cycle Some brands do. We have found that the French Setting produces the biggest and best loaf; also with a Dark Crust setting. NB The bucket is small and square in design, dough is not well developed and staling occurs more quickly comparatively to other designs. But before you dive into the recipe, there are a few things to consider. This recipe works for my machine Breville Bakers Oven . It may need some tweaking for your machine. Here are some tips to help you get great results. Take the time to read the instructions and understand how long it takes

to make a basic loaf, the capacity mine can do 750g or 1kg loaves and what types of settings are available. This can vary from one machine to the next so check the manufacturer's instructions. In my machine the liquid ingredients are added first, followed by the flour and yeast. These all have unique properties and as a result behave differently when they are baked. The machine settings will help to handle the flour varieties see note 3 below. Flour absorbs varying amounts of liquid depending on the weather. <http://skmc.ru/userfiles/creative-d100-manual-pdf.xml>

So, while one day the dough may be perfect, the next day it may be too wet or dry see note 4 below. Here is a guide to what has worked for me If at any time there is some rye or wholemeal in the mix, use the wholemeal setting. If you are in a hurry, use the rapid setting. Otherwise, the basic setting is always the best starting point. This will be fine once you really know your machine as I'll explain further. Once you have added the ingredients and set the machine to work, come back from time to time and check the dough. You want to see a fairly smooth ball that is a bit tacky to the touch. If it appears a little to dry or wet, here's what to do. If the dough is still dry, add another tablespoon. Keep doing this until all the flour is mixed in and a smooth dough ball is achieved. If the dough is still too wet, add another tablespoon. Keep doing this until all the flour is mixed in and a smooth dough ball is achieved. So if there is a problem, I can hear it as the machine doesn't have its regular, smooth rhythm. When this happens, I check the dough and make adjustments as outlined above. Once you have used your machine a few times, you will also be able to pick up on when things may need tweaking. Make it white, wholemeal, multigrain, rye or whatever flour mix you prefer. Insert the pan into the machine. Select the best setting based on what flour you have used. See notes above. Press Start Once finished, remove the loaf from the pan and allow to cool on a wire rack. Or just leave it to cool in the pan I do this all the time I would love to hear about any flour combinations you use and any other tips for ensuring each loaf is a success. Please share in the comments below. Lets get back to basics, enjoy the cooking experience and dish up food the family will love. Thanks for dropping by xx.
