Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with conair scales ww78 manual . To get started finding conair scales ww78 manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

conair scales ww78 manual

Please try your search again later. Then it changes, and is EXACTLY the same for 34 days. Anyone else will measure the exact same weight down to the tenth of a pound, without any fluctuation for a week or more at a time, irrespective of what I eat or exercise. I would definitely not recommend this scale! I put new batteries in and now I can't get it to work. I do not know how to do that. Mine did not come with instructions. It was already on lbs. Push on the battery edge by the small white tab. The battery will pop out. I used a tiny bladed screwdriver to hold the little plastic snap clips away from the battery careful you don't want to break these and then was able to pry the battery out with the tip of the screwdriver. A pain to be sure, but it can be done without too much difficulty. If my memory serves me correctly, the battery type is DL2032. I used a tiny bladed screwdriver to hold the little plastic snap clips away from the battery careful you don't want to break these and then was able to pry the battery out with the tip of the screwdriver. If my memory serves me correctly, the battery type is DL2032. I want to be able to match the reading at my Meeting to the reading I get on my own bathroom scale at least approximately. It does not reweigh. It shows the same weight each and every day. What is the problem and how can it be fixed? This will put it into the flashing program mode and you can enter data. Login to post I just installed new batteries and it constantly reads 68.8 lbs before stepping on the scale. Remove the batteries again. Is there a way of resetting this? Thanks! Check manual that came with your scale. I no longer have the receipt so I do not have any come back from Tesco. When you get on the scales it will give you one weight reading. I have a EE on the digital mode what does this mean and what can I do to fix it so the correct weight shows? With the scales switched OFF place 2 glass plates on the scales and press ON. The scales should now display 0g. <http://www.poznanapartment.pl/userfiles/915gv-motherboard-manual.xml>

If this doesn't work add more weight and try again. There is also 4 screws on the underside of the scales which hold the weighing bar in place, if you loosen the 2 smaller screws this should relieve some of the stress so less weight is needed to zero the scales. Help please! It mentioned making sure batteries were flat side uppermost in their compartment, which did the trick. I have removed battery and put back thinking maybe it just needed to reset itself but it continues to put out that reading. It is a model 39Y can you tell me how to fix this issue. It goes back to P1 The up and down arrows do not respond. How do I change info for each user? Answer questions, earn points and help others. Please try again later. Please try again. Please try again. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Register a free business account Please try your search again later. Product Type Bath Scales. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. A.E. 3.0 out of 5 stars You have to tap the middle to get it to work. Sometimes it is sensitive enough to come on right away, sometimes I find myself almost bagging on the thing for a minute. I end up picking it up slightly with my toe and letting it go to jolt it awake. I feel the weight measurement is accurate, at least repeatable. I'm not sure about the other measurements, they seem fine to me, but I'm afraid I don't know better to know the difference if it were off. It looks great, while the BMI and % features are

not why I got it, it is nice to see, though I wish I had the option to scroll through the measurements rather than to wait for them to flash through. And in the term of it I must say I am fairly disappointed. <http://pilot-market.ru/new/files/915m07c-g-6ls-manual.xml>

So to start it is not very sensitive. In order to test how good a scale is, there are two things you can try. Sensitivity and accuracy. So, to start with, I added 2lbs to it to see if it was sensible enough, and it wasn't. It didn't even register a change. I have no tools to check the accuracy, but it can change more than 2% if your feet are dry, moisture or slightly wet. A typical experiment is to use the scale before and after a shower. Sometimes it doesn't even work, if my feet are too dry. A better backlight for us older users would be nice to better allow the reading of the values from the dial. There are very likely better choices at this price on the market. My old scale would give me a different reading every time I stepped on it, so I would step on it three times and then average it. That's not an issue with this scale. Other than that, I think it's an excellent scale and I highly recommend it. It is stylish in looks and so fits beautifully in with my decor and the entire family is sharing in using it to measure our weight loss. It is helpful in achieving our goal as a family and it gives the BMI and pulse measure. It is indeed a great buy and I am very pleased with this purchase. Had to go online to find it, which is fine for me but what if I didn't have that option. I noticed online that others had the same issue. Other than that I like it, very attractive design, can give just your weight or if programmed you can get weight, lbs of fat, % of fat, % of water, bone mass, and BMI. Have only had it about a month so have to see how durable it is but so far so good. The actual Open Box product may differ in packaging and included accessories, but has been tested to ensure basic functionality. Very frustrating. Very disappointed that Weight Watchers would put their name on this junk. I'm going back to Tanita scales. Easy to use. I've seen a lot of complaints about this but it's not hard once you get the hang of it. The fat readings can depend heavily on how hydrated you are, since it's based on your body's electrical resistance. Try to take readings on the scale at the same time every day for consistency. I wouldn't take the fat readings as completely accurate, but I'd say they can be used as a very good estimate and can help you track progress in weight loss. It's been a very good motivator for weight loss so far. Click here for more details. Secure shopping made faster. Check out with PayPal. By purchasing this Weight Watchers Scale, youve made the first step toward taking control. Your smartphone or tablet device and the scale communicate via Bluetooth connection. Make sure that your mobile device has Bluetooth turned on, or the app will not be able to get data from the scale. In order to turn on Bluetooth, go to your mobile device settings and slide the Bluetooth button to "on". You can do this before you open the app.

<http://flaviaflores.com/images/cannondale-lefty-fork-service-manual.pdf>

If you forget, the app will remind you during the setup or the connection process. After you change the setting, click on the app again and the app will bring you back to the screen on which you were before. The scale has to be on display lit up in order to connect. Firmly tap the scale with your foot to turn it on. With the app open, press CONNECT TO SCALE. Once the scale display is lit, the LCD display will show a blinking Bluetooth icon to show that it is attempting to communicate with the app. At the same time, the app shows a Bluetooth symbol surrounded by blinking dots while trying to connect. If your mobile device and the scale fail to connect, simply let the scale display go off and then try again make sure you tap the "connect to scale" button on the app. Once the app and the scale connect, you will see a stable Bluetooth symbol on the scale, along with a check mark, and the app will show a Bluetooth symbol and check mark on the bottom of the page as well. Now you can step on the scale. Stand still while the scale takes your measurements and then displays them in the app. The scale should connect automatically to your device if your Bluetooth is turned on. If you are using a Samsung Galaxy S6, some users may have an issue with the Bluetooth connectivity. A common remedy is to clear the Bluetooth cache on the device. Note that this will clear data of all devices the phone has previously paired with so you will have to pair them all again. My scale used to connect fine and now my scale and the app are not connecting. There are a number of things that you can try Force quit the app and restart it on an iOS device with a home button, double tap the home button on iOS and swipe up to close the open app. Then tap the app icon to open it again. On an iOS device without a home button, from the Home screen, swipe up from the bottom of the screen and pause slightly in the middle of the screen. Then swipe right or left to find the WW Body Analysis Scale Tracker app.

<http://echoploda.com/images/cannot-manually-open-garage-door.pdf>

Then swipe up on the preview to close the app. On an Android device, force quitting instructions vary by manufacturer, but usually you tap the Square or the stack of rectangles button, and swipe up or to the side on the app. Change the batteries depending on how often the scale gets turned on, the batteries may be weak. This should only apply if youve had your scale for at least a few months. Weak batteries have a harder time making a BT connection. Try inserting a fresh set of 3 AAA batteries open the battery door in the back of the scale with a small Philips screwdriver. I am a WW member, but my weight does not sync from my scale app to my WW account to my WW app. If you give permission to WW to track your weight say "Allow" on the screen after the login, when you first

register, or any time you log out of and then back into the app, WW will record your weight information. If you are a WW subscriber with a paid subscription you will also be able to see the weight data the scale records in your account on the WW app. But, in order for the two apps to recognize that you are a WW subscriber, you must use the SAME username and password for both your WW account and your scale app account. I changed my username and password, now my data is gone. The app recognizes users by their usernames, not their real names. So the app considers your old username as person A and the new username as person B. Data for each will be kept in separate accounts. If you wish to transfer data, you can do so manually take and print screenshots of previous weighings tap the chart icon in the top corner of the dashboard screen and enter the data manually into the new account. My roommate and I want to use the same scale, but we each have a different device 2 users, 2 devices, 1 scale No problem. Up to 9 people can use the same scale. You go through the normal setup on the scale and choose a user number say, number 1.

When you are done weighing yourself, the scale displays your weight and body analysis measurements, and the app has recorded them choose "done" or "delete" on the screen that asks if you want to keep the measurements, the second person can set themselves up they too will go through the normal setup process on the app, and when it comes to choosing a user number, the app will show that user number 1 is taken, and only give them the option of setting themselves up as user 2, 3, etc. My spouse and I want to use the same scale, using the same iPad 2 users, 1 device, 1 scale. How do we set ourselves up on the scale. There is no need to program anything on the scale. Setup is through the app. You ONLY need to set yourself up on the scale if you don't have or don't want to use the app. Download the iOS version [here](#) or Android version [here](#) To set up two users on the app, if the app is on the SAME device i.e., husband and wife both use the SAME iPad or android device First person say, the husband sets up an account through the app use "registration" for the first time and "login" for subsequent uses and chooses a user number. When he is done weighing himself and the app has recorded his measurements choose "done" or "delete" on the screen that asks of you want to keep the measurements, he will log out of the app and his wife can register herself and then get her measurements. The next time the husband wants to weigh himself, the wife logs out and the husband logs back in. In your account settings, choose "settings", then press the blue "logout" button on the bottom of the page confirm the red "ok" when it asks you if you really want to log out. A list of all weighings with results pops up. She can find the entry with the wrong results her husband's weight etc and tap that it will open a window that allows her to delete the results of that one weighing. How do I enter weights manually. On the next screen, the keyboard will allow you to enter values.

To enter weight, slide the ruler to the correct number. To enter any other measurements, tap the respective field and the keyboard will pop up and allow you to type in the numbers for body fat, body water, etc. When done, tap "save" top right, in blue bar. App will go back to the dashboard screen and sync the newly entered data with WW and put it in the graphs. Manually entered values will be displayed just like values measured by the scale and synced to the app. This is a good option for times when you cannot use your own scale say, when you're on vacation, taking a cruise, visiting the grandkids, etc. Write down your measurements and manually enter them into the app, so you can continue tracking even when you're not home. I just weighed myself but only weight and BMI show. What happened to the other measurements. Make sure you are standing on the electrodes with both feet. Cover as much of the metal surface as possible. Make sure your feet are bare if you stand on the scale in pantyhose or socks, it may not be able to perform the body analysis If you are standing on the electrodes with bare feet and the scale is still not reading the measurements, your feet may be too dry. Try rubbing a little water or lotion into the soles of your feet, but be careful not to slip on the glass afterwards. I tap my scale but the display does not light up. Make sure that you have pulled the battery tab out of the battery compartment on the bottom of the scale. If you have pulled the tab and the display still does not light up, open the battery compartment use a small Philips screwdriver

to loosen the screw, open the battery door and check whether all parts of the tab have been removed. Ensure that the batteries are inserted with correct polarity see instructions molded into the battery compartment. Then close the battery door and tighten the screw again. The app is telling me to turn Bluetooth on. Your device and the scale communicate via Bluetooth connection.

Make sure that your device has Bluetooth turned on, or the app will not be able to get data from the scale. In order to turn on Bluetooth, go to your device settings and slide the Bluetooth button to “on”. If you forget, the app will remind you during the setup or the connection process. After you change the setting, click on the app again and the app will bring you back to the screen on which you were before. My scale only displays weight but no body fat, body water, etc results Make sure that your feet are aligned on the metal strips on the sides of the scale. The scale has to make contact with your bare feet in order to get the readings. Do not wear socks or pantyhose. Not all my measurements are showing up on the dashboard. If you are using more than one device, for instance, an iPad and an iPhone, to communicate with your scale, your data will be stored in two different places the measurements you took with your iPad will show on the dashboard of the app on your iPad and the measurements you took with your iPhone will show on the dashboard of the app on your iPhone. **Tips and Frequently Asked Questions PAIRING** There are several different pairing options One scale can pair with several devices. For instance, a husband, a wife and their teenage daughter can each have their own device and pair it to the same scale. The same person can pair several devices to the scale. For instance, the teenage daughter may pair both her iPad and her iPhone to the same scale. The same device can be used to pair to more than one scale. For instance, you can pair to one WW scale in the downstairs bathroom and to a different WW scale in the upstairs bathroom from the same phone. Several users can use the same device to pair to the same scale. For instance, a dad and his son can use the same device to pair to the same scale. Note the app assumes that the primary owner of the device will be the user of the scale and keeps that user logged on.

If a different user wishes to use the app on the device to connect to the scale, the primary user needs to sign out of their app account go to “my account”, then “settings”, and click “log out”. Then the secondary user needs to log on to their account to in order to be able to use the scale.

RESETTING THE SCALE You can overwrite existing user profiles user numbers. In order to do that, choose a user number that is already in use. The app will alert you to the fact that this user number is already being used and that proceeding with the setup process will erase all data previously gathered. If you choose to proceed, all old user data will be discarded and you can set yourself up as the new user under that user number. If you wish to erase all user data, you can reset the scale the reset button is on the bottom of the scale. Insert a wire or paper clip into the hole and push down similar to a computer reset. The scale display will show “Clr”. This will restore the factory settings and erase all user information. Please note that resetting the scale does NOT erase your data from the app, but the next time you try to connect with the scale, the app will ask you to choose a new user number user “slot”. Once you have chosen a new slot, the scale will take your measurements as usual and add them to the data you already have on your dashboard. **CONNECTING APP AND SCALE** Your device and the scale communicate via Bluetooth connection. Firmly tap the sale with your foot to turn it on. Once the scale display is lit, the display will show a blinking Bluetooth icon to show that it is attempting to communicate with the app. The app shows a Bluetooth symbol surrounded by blinking dots while trying to connect. If your device and the scale fail to connect, simply let the scale display go off and then try again make sure you tap the “connect to scale” button on the app. If you still have trouble, you may want to read the troubleshooting section or call our customer service line for help.

Now you can get on the scale. The scale sends a low electric current from one of the metal electrodes metal plates through the user’s leg and the pelvic area, down the other leg and back to the scale. It measures the resistance to the electrical signal between the electrodes. This, in

conjunction with the user's weight and demographic information gender, age, height, allows us to estimate a user's lean body mass and from that body fat, body water, and bone mass. BMI is a calculation involving a user's weight and height. Is the scale safe for someone with a pacemaker. We do NOT recommend that users with pacemakers or other internal devices use any of our body analysis scales. The weight only function, which does not require user setup and which does not release any electric current is safe to use, but not the body analysis function. If you have questions regarding the safe usage of body analysis scales, we suggest you speak with your healthcare provider. Is the scale safe to use for someone with metal implants or prosthetic devices. There is no safety hazard or risk to the customer using the scale with metal implants or prosthetic devices. The measurement of the resistance may be slightly affected which may result in a slightly lower body fat % reading, but if the user keeps using the same scale, the result will be off by the same amount, so it can be used for tracking trends with no problem. Why do you recommend not using the scale during pregnancy. The body of a pregnant woman contains significantly more water than that of a nonpregnant person and the formulas we use to calculate the body analysis measurements are not calibrated for the additional water carried during pregnancy. The weight only function no user setup is fine to use during pregnancy. What is the maximum weight the scale will measure. The scale will measure 400lbs or 182kgs in increments of 0.1lb or 50g. If significantly more weight is applied, the scale will show ERROR.

How do you change the batteries. Use a small Philips screwdriver to open the battery door on the back of the scale and take out the used batteries. Be sure to dispose of the old batteries in accordance with local laws. Then close the battery door again and tighten the screw. Tap your scale firmly with your foot to turn it on. Why do the various percentages of the body analysis not add to 100%. Body composition consists of fat body mass and lean body mass. Lean body mass is the total body mass less the fat body mass. The water percentage is calculated as a certain % of the lean body mass. However, muscle, fat and bone all also contain water, which means that the total will always be more than 100%. My scale has the blue backlight on all the same, even after I remove the batteries. Make sure you remove the blue static cling sticker from the display before first use. My scale is not accurate. Your scale relies on very precise sensors, called load cells, in the feet of your scale. They will react to subtle shifts in the position of your body, and even to changes in temperature. For the most consistent results, it is important to weight yourself at the same time of day, in the same clothes, with the scale in the same spot on your floor and standing on the scale in the same position. For best accuracy, set the scale on hard, level flooring, like a hardwood floor, but not on carpet. CUSTOMER SERVICE Please read the FAQs and the Troubleshooting sections before calling our customer service hotline. Many issues can be resolved by following the advice in those sections. Please also let us know what device you are using, and what version of software i.e., iPhone X with iOS 12 or Google Pixel 3 with Android 9.0.
