The latest version of Iron browser is now available for download, boasting unparalleled privacy and security features. This cutting-edge browser is compatible with Windows, Android, Linux, and Mac operating systems. With its robust security measures, users can enjoy a safe and private browsing experience. Iron Forum has been flooded with inquiries regarding the updated Android version, with some users expressing concern over its compatibility. However, it appears that the issue lies not with Iron itself but rather with third-party extensions or websites, such as Farm Town. In response to these queries, SRWare has reassured users that they are working diligently to resolve any technical issues. The company's Twitter and forum platforms have been actively engaging with customers, providing updates on their progress. One notable user, MarkusH, had reported a compatibility issue with the NewTabWithoutSearch.zip file, which did not match the current Iron version. However, after further investigation, it was discovered that the problem lay not with SRWare's update but rather with a third-party extension. Other users have also shared their experiences, highlighting ongoing issues with tab stability and webpage loading. SRWare has acknowledged these concerns, assuring customers that they are committed to addressing these problems through continued updates and maintenance. Despite some technical hiccups, Iron browser remains an exemplary choice for those prioritizing online privacy and security. With its compatibility across multiple platforms and robust security features, it's no wonder why users have gravitated towards this exceptional browser solution. SRWare Iron - популярный альтернативный браузер для приложений, который предлагает улучшенную безопасность и конфиденциальность по сравнению с другими браузерами. Он доступен для Windows, Android, Linux и Mac, что делает его универсальным решением для тех, кто seeks improve their online privacy и security. One of the key features of SRWare Iron is its ability to sync data across devices using ChromeSync. This allows users to access their bookmarks, history and other data on any device that has the browser installed. Additionally, Iron offers a range of other features, including a built-in ad blocker, malware protection and a user agent switcher. SRWare Iron also includes a Config & Backup Tool, which allows users to backup and restore their browser settings and profiles. This can be useful for those who want to transfer their settings from one device to another or who need to recover their data after a software update. Despite its many features, SRWare Iron is not without its limitations. Some users have reported issues with the browser's sync functionality, while others have experienced problems with its ad blocker. However, these issues can often be resolved by resetting the browser's settings or updating to the latest version. Overall, SRWare Iron is a solid choice for those seeking a more secure and private browsing experience. Its range of features and universality make it an attractive option for anyone looking to improve their online safety and security. Iron still has old, virgin settings like before. I haven't found out where the backup tool that I started to restore the secured profile from the portable directory was configured to apply the reversed settings. Hello MarkusH Posts: 39 Joined: Sun Dec 02, 2018 5:02 pm Post by MarkusH » Tue Feb 26, 2019 10:37 am Unfortunately, I cant make the user profile of an installed Iron version available for a portable Iron Version via manual copying. Bookmark settings are correct, but when I call the settings in the portable version, it shows: "Chrome has detected that some settings have been changed by another program. All settings will be reset". So, manuel copy profil is still only solution. Therefore, again the question: How to bring the profile of an installed Iron Version one to one into a Portable Version of Iron? I want to use both the same settings. Hello Markus dtr Posts: 2 Joined: Mon Jan 09, 2017 11:23 am Post by dtr » Tue Nov 29, 2022 12:00 pm Hi, it's not very clear why the tool is still included, because it doesn't fulfil any purpose anymore. You can make a backup, but the restore will be reset basically at startup of Iron. This also applies to manual unpacking and reinstalling. Can you prevent the settings in Chrome from being changed or is it planned that the tool will work again someday? Grüße, dtr.
