Bio chem strain

Stoners who like their cannabis strong and their tokes pungent will gravitate towards the noteworthy Bio Chem strain. It checks all the boxes: it’s robust, dynamic, sedative, and relieving— all the marks of a true balanced hybrid. Bring some Bio Chem buds to your next couch fest and see just how powerful it is. For now, this guide can help paint a picture of what to expect from this potent strain. Bio Chem Strain Background Bio Chem is known to pack a punch and for good measure. Its origins say all there is to know. This cannabis strain originated as a cross between the celebrated Chemdawg 4 and the sleep-inducing Sensi Star, cultivated by 303 Seeds. Bio Chem’s THC levels typically range from 17-25% which reinforces the fact that this is no strain to joke around with. This strain is a balanced hybrid, in most cases, giving it that energy-boosting ability while simultaneously putting you to sleep. It can also come in an indica-dominant form, playing a soothing tune to your cool Friday night. Its look is quite different from the sleepy dark green you would imagine, however, so grab your snacks and hang on. Bio Chem Strain Appearance, Aroma, & Flavor The contrast between the bud’s vibrant greens and its deep purple hues are complemented by the amber hairs that top it all off. Eggshell-colored trichomes glisten like dewdrops on blades of fresh green grass. The Bio Chem strain delivers on the visual aspect with its eye-catching, spade-shaped leaves and compact buds. You’ll note that if you touch the herb it can get quite sticky, so using a grinder might be the best way to go about breaking this one up. Upon holding the bud in your hands its smell will instantly captivate the senses. Your first whiff will bring out many familiar but, at the same, surprising scents: citrus, spicy, earthy, and diesel. Each breath from then on will be a soft and sweet one followed by a strong exhale and pepper hints all around. This aroma perfectly matches its burst of spirited flavors. Just like its fragrance you can expect a lot of diesel due to this strain’s strong Diesel family roots. Also, inheriting from Chemdawg, lemony and citrusy flavors peek out from the flower, its skunkiness also making a show for a split-second. The end of each exhale is that spicy taste that will make you want to get another round of its sugary inhale. And you will, of course, its high will keep you wanting more. Bio Chem Strain Experience Just as with its spicy but sweet aroma and taste, its effects mimic the ride of such a unique profile. First, you will feel tingly and giggly— joyful and bubbly from all the excitement. But remember, this strain is very powerful, so much so that newcomers to the scene might be knocked out, especially if they do not slow down or build up properly. For longtime stoners, this could still be too powerful if you take in too much, although its relaxing start is nothing to complain about. Then— the high slowly creeps on you. A pleasantly sweet high, slowly dragging you to a couch-locked, sedated tranquility. It’s a perfect strain to end the week with, a nightcap from a long day. Keep your fridge stocked or a snack close, Bio Chem can make you hungry pretty fast and could cause you to feel fatigued if you take huge amounts of it in one sitting. Bio Chem Strain Medicinal Effects Bio Chem has potent THC levels, providing medical marijuana patients with help for body-mind relaxation, stress, depression, and fatigue if you do not take too much of it at one time. It can lessen nightmares or insomnia as well. Lastly, it is absolutely essential for insomniacs and people who go through nightmares constantly. Its impressive effects can prompt many to plant their own Bio Chem flowers in their own backyard. Growing Your Own Bio Chem Strain You will need some experience before tackling this seed. Bio Chem grows well with monitored temperatures both indoors and outdoors and it needs to be pruned regularly to grow abundantly. You will have to find a clone to commence your Bio Chem growing which takes some more knowledge in the cultivation of cannabis than beginners typically are looking for. However, if you do plan to take the step, you can educate yourself on that matter. Soon enough, after lots of monitoring and pruning, you will be able to see flowers in 48-54 days. Harvesting season is somewhere between 9 and 11 weeks indoors and mid-October outdoors. You can expect 2-3 ounces per plant outdoors and 1-2 ounces per square foot indoors. Where To Get the Bio Chem Strain In love with the idea of this potent strain? Just want to try it because it sounds badass. Look no further than 420VL. RenewLog inGet your cardBiochem combines Chemdawg #4 and Sensi Star, first produced by the team at 303 Seeds. This potent cannabis strain (cultivar) with a quick onset features a high THC level testing up to 25% with little CBD content.Biochem’s intense high has indica characteristics predominantly (70%), with about 30% sativa components that produce strong cerebral effects. It boasts spicy, diesel aromas and flavors and helps treat insomnia, chronic pain, and low appetite.Get cannabis dosing and product guidance from a Leafwell healthcare provider with a one-on-one counseling appointment.Book an AppointmentOverviewEffectsMedical ApplicationsDosingGrowingFAQsTetrahydrocannabinolTHC22%-25%CannabidiolCBD1%Sweet/Citrus/Diesel/SpicyDiesel/Apple/Coffee/ChemicalBiochem’s terpene profile consists of beta-caryophyllene, myrcene, and limonene, producing spicy, herbal flavors and aromas. With myrcene’s pain-relieving and sedative properties and limonene and beta-caryophyllene’s anxiolytic (anti-anxiety) benefits, this strain delivers a strong, relaxing, sleep-inducing high. MyrceneLimoneneBeta-CaryophylleneFlavonoids are one of the lesser-known compounds in cannabis, and little is known about the flavonoids present in each strain because they are rarely tested. Like terpenes, flavonoids add to each strain’s flavor and fragrance profile.Studies have shown that the major flavonoids present in all cannabis plants are cannflavins A, B, and C.Biochem’s has been reported to have the following effects:RelaxingHappinessTinglyLaughterSleepinessThe following adverse effects have also been reported:Dry Eyes/Dizziness/Dry Mouth/Headache/Red Eyes/CottonmouthBiochem’s intense high locks its users to the couch for some uninterrupted relaxation. Due to its 70% indica profile, sleepiness quickly follows a Biochem session, making this the perfect strain for use after a long, stressful day. Biochem’s intense yet pleasant high and psychoactive effects make it a good strain to address mental medical conditions, such as soothing the sleeplessness of insomnia. Users also harness the Biochem strain to stimulate the appetite when one is lacking or to reduce the experience of chronic pain or aches.InsomniaThe heavily sedative elements of Biochem can stop a parade of restless thoughts and cultivate an overall sense of peace and well-being that quickly helps users fall asleep. Organ SystemsMental / Emotional,Brain & Nervous SystemLoss of AppetitePatients undergoing cancer treatment or who otherwise are struggling with a regular appetite will find Biochem a great choice for stimulating hunger. Organ SystemsCannabis for chronic painHeadaches, cramps, and muscle spasms benefit from this potent strain, whose uplifting effects help distract from the experience of pain. Organ SystemsSkeletal,Brain & Nervous System,MuscularDosing medical cannabis is a highly individual experience that depends on the user’s tolerance, experience, and endocannabinoid system. Biochem is a highly potent cultivar, making it a perfect strain for an experienced user who’s developed a moderate tolerance to cannabis.For those starting out, we recommend starting with a very small dose and waiting a while to evaluate your response. The high from Biochem is reportedly very strong, so a little amount will go a long way and is best used at the day’s end.Because 303 Seeds has kept relatively silent about growing advice and Biochem marijuana seeds are hard to come by, the cultivar is considered by most to be a more challenging grow. The plant will flourish indoors and outdoors as long as proper pruning is maintained and environmental conditions are well-monitored.Medium and branching. Mild and Mediterranean climates.Nine to 11 weeks.10th PlanetTHC 17%-20%CBD 0.56%-0.87%Keep updated with our social mediaSupport when you need it Reach out to our support team here ©2025 Leafwell. However it is important to note that cannabis affects everybody differently, and a majority of consumers report not experiencing side effects when consuming cannabis. To determine if Biochem plants are ready for harvest, observe the trichomes under a magnifying glass. When these tiny resin glands shift from clear to a milky white color, with some turning amber, it’s time to harvest. Additionally, the pistils should darken and curl, indicating peak maturity and optimal cannabinoid content. Harvesting Techniques Harvesting Biochem requires precision. Use sharp, sterilized scissors to cut the branches, removing large fan leaves. Then, delicately trim the sugar leaves to expose the buds, taking care not to damage the trichomes. This process preserves the plant’s cannabinoids and terpenes, which contribute to its effects and flavors. Drying and Curing Drying should occur in a controlled environment with temperatures around 60-70°F and humidity levels at 45-55%. Hang the branches upside down in darkness for about a week until the stems snap but don’t break completely. For curing, place the buds in airtight containers, opening them daily for a few minutes to exchange air and release moisture. This stage can last from two to eight weeks, enhancing the Biochem strain’s potency and flavor profile. Storage Store Biochem buds in a cool, dark place in airtight containers, such as glass jars with humidity control packs to maintain a 62% humidity level. This practice preserves the strain’s quality, prevents mold, and maintains the desired relaxed, euphoric, and sleepy effects along with its spicy, earthy, and cheesy flavors. The Bio Chem strain might have a name that brings back memories from finals week in college. The strain not only sports an incredible high but is also quite potent. Strains in today’s world differ in potency in a much more dramatic fashion than in the past. Below will highlight what you need to know about smoking, purchasing, and growing the Bio Chem cannabis strain. Is Bio Chem strain an Indica or Sativa?Bio Chem is a 70/30 Indica-dominant hybrid of Sensi Star and Chemdawg 4. Expect full sedation with this strain so reserve it for a lazy day or for late at night. You should prepare to fall asleep so keep a drink around as you might take a nap for a few hours minutes after taking on Bio Chem.Sensi Star is not for those without extensive experience smoking weed as it has up to 26 percent THC. You will feel a sense of focus with this strain which is why it can be great for those with ADHD. The citrus and herbal flavor is a huge bonus with this incredible strain. Chemdawg 4 is not as potent as the original Chemdawg at around 19 percent THC but still packs a punch. Avoid smoking this strain at night as it could lead to a racing mind. You will find that this strain is a great candidate for those that love to wake and bake. A grower will be happy with the yield that Bio Chem possesses come harvest time regardless if it is grown indoors or outdoors. Indoors you can expect up to 2 ounces per square foot. Outdoors growers will see up to 550 grams which is around 20 ounces per plant. The flowering phase of Bio Chem lasts anywhere from 7 to 8 weeks. You should expect neon green nugs with purple hues. There are also orange hairs along with a nice covering of trichomes that can have a purple tint at times. Harvesting marijuana should be done at the right time for the effects you want out of a strain. Waiting too long can lead to different effects than if you harvest too early. The potency of Bio Chem has a range of 20 to 25 percent THC. Overconsumption is likely just going to lead to a long nap or a peaceful sleep for the night. Toké with caution when consuming potent strains as you want to enjoy your high. Dreading how high you are going to get is no way to consume marijuana so approach it with a bit of moderation in mind. The flavor as well as aroma of Bio Chem is a combination of citrus and diesel. The terpenes in this strain include Caryophyllene, Myrcene, and Limonene. Caryophyllene has a spicy flavor that can be likened to pepper. The terpene has been known to bring relief to those that suffer from insomnia. OG Kush and Blue Dream are two famous strains that have been around for decades that contain Myrcene. Limonene can help bring relief to depression and anxiety. The terpene also sports a great citrus taste that has been compared to lemon peels. Bio Chem can be relatively expensive at \$45 to \$50 per 1/8th of an ounce. Saving on the costs of marijuana will likely require you to purchase in bulk. The full ounce can run at much as \$340 to \$360. The Seed Pharm and Pacific Seed Bank both carry these feminized seeds. The truth is that you will not be able to receive these in a legal manner. The seed bank might send them regardless but you are the one breaking federal law/taking a majority of the risk.The risk simply is not worth it when you can find seeds legally. Heading to a nursery or dispensary should be the first option you take. Growing weed is something that is far more accepted than in the past so asking around won’t be frowned upon in most circles. Marijuana should be viewed as a tool to bring relief to people of all walks of life. The more the plant is studied the more the plant and its compounds are found to help the body’s systems maintain homeostasis. Bio Chem can help alleviate symptoms of the following medical conditions:Depression Fatigue Insomnia Nausea Stress Loss Of Appetite NightmaresBio Chem won’t be the strain that you want to use if you rely heavily on CBD for relief. The CBD content does not even reach 1 percent. Luckily, there are a number of products on the market that make it easy to supplement CBD on a daily basis.Bio Chem might not be the strain you want to try your luck growing but it definitely one you should try smoking. Finding the strain might be a bit of a challenge depending on where you are located. Bio Chem is another juggernaut that comes from Chemdawg lineage. My impressions of this strain are very good. It is a great 2-way indica. I say that because this is great sleepy strain, one of the best I have encountered, usually no strain of cannabis makes me weary. This however, is easily countermanded with some caffeine. Making this a perfect strain for individuals with ADHD or ADD. The physical effects are amazing! First the body high is one of a kind, similar to a muscle relaxer. Fatigue melts away snow in spring sun. I absolutely love this strain, such a delight.B.....eReally good strain,but its really strong. I tripped out for a good 10 minutes and then it knocked me OUT. This stuff gave me the best darn sleep of my life. Would recommend 8/10. Not a daytime strain but perfect for a good night.4.....yVery mellow and slow onset, then it hits and drops you into a euphoric state of bliss. All Rights Reserved. Biochem is the sedating cross of Chemdawg 4 and Sensi Star. This predominantly indica strain offers users weighted relaxation accompanied by a gentle headiness that infuses the body accompanied by a soft and pacifying haze. Appreciate Biochem in the evening, as its effects needless to say sedate. The odor and taste tend to be wealthy with flavors of fuel, citrus, and herbaceous greenery, while the appearance is bright green accompanied by a peppering of purple entangled in orange pistils. When smoked or converted into an edible form, the flavor of the Biochem strain is best described as Earthy, Diesel, and Berry. Biochem Strain Medicinal Benefits and Side Effects Relaxed 99.69% of users reported feeling relaxed. Happiness 49.47% of users reported feeling happier. Lack of Appetite 76.67% indicated a decrease in appetite. Euphoria 86.34% of users reported feelings of happiness. Anti-Depressant 51.14% of users felt uplifted after consumption. Insomnia 99.6% of users reported sleeping improvements. Stressed 62.15% of users reported reduced stress. Dry Mouth 99.33% of users reported a dry mouth. Dry Eyes 22.73% of users reported dry eyes. Insomnia 65.06% of users reported trouble sleeping. Dizziness 1.56% of users reported feeling dizziness. Sleepy 77.85% of users reported feeling sleepy. Tingly 82.59% of users reported feeling tingly. How to Breed Biochem SeedsBelow you can find a list of strains that are parents and predecessors which led to the medicinal effects and properties of the Biochem cannabis strain. It was through the breeding of these strains which led to the production of Biochem marijuana seeds, while attempting to cultivate their combined effects and therapeutic properties. To breed your own Biochem seeds, you would need to cultivate a mixture of the following strains: Part of the famed line of Chemdawg strains, Chemdawg 4 is unlike its coun.. Sensi Star by Paradise Seeds is a legendary indica strain that is renowne.. Body High, Euphoria, Relaxing, SleepyDepression, Fatigue, Insomnia, Nausea, StressCitrus, Diesel, Herbal, Skunky, Spicy.
