Wondering how to see a Wi-Fi password on Android? Maybe you're connected to a network where you forgot the password, or want to check the password for a friend's network so you can connect another device to it. No matter the reason, we'll show you how to find saved Wi-Fi passwords on Android using a few different methods. These only let you see the password for networks you've already connected to in the past. You can't use them to find the Wi-Fi password for a network you've never joined; you'll need to ask someone who manages the network for the password. You shouldn't share the password for a network someone else manages unless you have their permission. How to See Wi-Fi Passwords on Android Without Root In Android 10 and later, you can view Wi-Fi passwords for your saved networks without a rooted device. Let's look at how to do this using stock Android 12 on a Pixel device—the process may look slightly different depending on your phone and Android version. To view a Wi-Fi password on Android 10 or later, open Settings and head to Network & internet. On Android 10 or 11, tap Wi-Fi. On Android 12, you'll need to select Internet instead. You'll then see your current Wi-Fi network at the top of the list. Select it to view options for the network. If you're not connected to the right network, select another one from the list; check the Saved networks entry at the bottom of the page to easily find past connections. On the Wi-Fi network's overview page, select the Share button. You'll need to confirm your face/fingerprint, or enter your PIN code, to proceed. Once you do, you'll see your network's Wi-Fi password listed below a QR code. Now you know your network's Wi-Fi password and can give it to someone else, or enter it on a different device. The QR code displayed on this page makes the process even more convenient, as it lets another device join the network without needing to manually enter the password. This increases network security by concealing the actual password, as well as sidestepping the frustration of typing the password incorrectly. If you're sharing the password with an Android device, that other device can tap the QR Code icon next to Add network (below the list of Wi-Fi networks) to easily scan and join. If the other person has an iPhone, have them scan the code using the Camera app, then tap the prompt to join. See how to scan QR codes on Android and iPhone if you have trouble. Starting with Android 12, you'll also see a Nearby button that lets you share the password with other Android devices around you. This uses the Nearby Share function, and saves the step of having to scan the QR code from your device's screen. For convenience, you may want to screenshot the QR code so you can send it to others without going through the above menus every time. Just remember that anyone with that code can join your Wi-Fi network, so keep that picture safe. How to See Wi-Fi Passwords on Android 9 or Older If you're running Android 9 or earlier, or your phone doesn't feature the above option for some reason, you'll need to turn to other options to reveal your Wi-Fi password. Unfortunately, these methods all require a rooted Android device. This is because the file that holds the Wi-Fi credentials for saved networks is in a protected directory of your phone's storage. You don't have permission to view the folder, or the file within it, unless you're rooted. If you have a rooted device and want to see your Wi-Fi password on Android, you can head to /data/misc/wifi using a file explorer app that supports root browsing. Open wpa_supplicant.conf and you should see your network name (ssid) and its password (psk). In case this doesn't work, or you want to try another method, you can try using an Android Wi-Fi password viewer app like WiFi Password Viewer. These let you select a saved network to view the password. They require root, and have mixed reviews, so your mileage may vary. If your phone encrypts the file containing Wi-Fi passwords, there isn't much apps like this can do. View Wi-Fi Passwords on Another Device These are the two main methods to view saved Wi-Fi passwords on Android. If you're not rooted and use Android 9 or earlier, your best bet is to check the Wi-Fi password on a desktop device instead. These make it a lot easier—see how to find Wi-Fi passwords in Windows 10 or how to view Wi-Fi passwords on a Mac for help. In the future, consider using a password manager so you have your own record of important Wi-Fi passwords and don't need to use these workaround methods. You should also make sure your own Wi-Fi network is protected against attack. • Filed to: Backup Android • Proven solutions There are numerous occasions that demand you to backup Wi-Fi passwords on Android. It might be migration to a new Android device, or updating the existing device firmware when the process can influence existing data and requires backing up your device. For managing such scenarios, it's imperative to go for the right ways and carry out the process without significant data loss. Here, in this article, we are going to elaborate the entire process of backing up Android Wi-Fi passwords. First of all, you need to backup Wi-Fi networks on Android to your Google account. As we all know, Google is one of the most convenient way to save and restore various data. Let's learn the process in detail. Step 1. Go to 'Settings' in your Android device and then tap 'Account'. Now, hit on 'Add Account' option. Once you do that, login to your Google account using desired credentials. Step 2. Now, under 'Settings' tab find 'Backup and Reset'. Select the 'Backup my data' so that you can backup Wi-Fi networks passwords on Android to Google server along with app data and settings. Though, backing up Android Wi-Fi password over Google is pretty simple, many Android devices restrict this feature. Method 2: Backup Android using Password App Apart from using Google as your Wi-Fi password backup option you can try third-party apps from Google Play Store. My Wi-Fi Password app is one such application to backup Wi-Fi passwords on Android. You need to root your device before using this app. This app can also backup and recovers hidden Wi-Fi passwords as well. Step 1. First install and launch the app on your Android device. Now, make sure to allow the root access to the app. Without root access you can't explore the features to decode Wi-Fi passwords. Step 2. Soon after you've granted Root privileges to the app, you just need to find the Wi-Fi name from the list and tap to see the Wi-Fi password. Step 3. You can copy and paste the password or also can share it with anyone. Moreover, you can also email the passwords to your email ID and access it later when needed. Once the Wi-Fi password is backed up, you can then backup the Android device over Wi-Fi without any trouble. As you know, to back up the entire data of an Android

device, it is essential to have a strong Wi-Fi connection. Part 2: Guide on Backing up Android over Wi-Fi When you think of backing up your Android device over Wi-Fi, how about an app that can backup Android Wi-Fi passwords as well? My Backup Pro is such an app to backup or restore your device data to a local device or SD card, or Cloud servers like Google Drive or Dropbox. With this app you can directly backup data to your computer using the internet. The major turn off with this app is you need to allow root access to your device. Here are the steps. Step 1. Install 'My Backup Pro' app from Google Play Store on your device and launch it. Now, click 'New Backup' to create a backup for your Android phone. On the next screen select desired data types or tap 'Select All' and then 'OK' to continue. It will back up the entire device data. Note: You can backup your Wi-Fi passwords as well by selecting the 'APNs' option from the list. Step 2. From the next upcoming pop-up you'll be asked to select either 'Application & Media' or 'Data'. Select the one you prefer. Step 3. Next pop up screen will prompt you for the preferred storage location of your backup file - 'Local' or 'Online'. Here, you need to chose 'Online' and specify the desired cloud storage account i.e. 'Google' or 'Dropbox' to back up the said data. Though, these apps are useful, what if they vanish from the internet one day, leaving everything berk sake. Some apps may be violating Google's policies and get banned from there in future. Once you backup your Android over Wi-Fi, how about doing the same using a reliable method such as a computer? Part 3: How to Backup Android without Wi-Fi As you are already aware of the risks of backing up Android over Wi-Fi, we are going to introduce you to an amazing tool, dr.fone - Phone Backup (Android) to resolve your woes as it uses a computer to backup your device data. It has plenty of functionalities such as backup preview prior to restoring it, no overwriting of old backup files and no data loss during restore and backup, etc. Moreover, the tool is highly recommended and trusted by users across the Globe for its reliability and success rates. Easy steps on backing up Android on your computer Step 1. Connect Android device to PC. After that, we choose "Backup & Restore" from the app homepage. Step 2. Enable USB debugging on device, and then open the backup files you want to restore. Step 3. Preview and select backup files. After the Android backup is finished, you can move on to click "View Backup History" for checking whether all of your desirable files have been backed up successfully. Write in the End It is recommended to backup Android device data as well, prior to resetting or restoring Wi-Fi passwords on your device. Sometimes, small glitches in the process may cost you your valuable data on Android. So, when you backup Wi-Fi passwords on Android, make sure to backup the device data as well using desktop based software applications like dr.fone.
