This candy maker meets all the cravings of sweet teeth producing M&M's, Milky Way, Skittles, Snickers, and more. Their other productsfood for animals and drinks. The life insurance company now takes its first place in Wisconsin because Johnson Controls International was based outside the United States. Please. Please.Again. Fairmont, West Virginia is home to the Monongahela Power Company, which operates an electric transmission and distribution system. Gas turbine power plant at night Correct answer: When you think about creating a business, all the focus is usually on what you want to do: how the app will work on someone's phone or how attractive the product will be similar on store shelves. There is a new wave of entrepreneurs who believe that the real key to long-term success comes from focusing on the design of the company – not the product. This means establishing a solid business philosophy, promoting cooperation and friendliness among staff, while still being able to make key decisions – all the steps that help you save your office from feeling like another widget factory. The topic was presented at the first Northside Entrepreneurship Festival in Brooklyn recently on a panel that included Anthony Casalena, CEO of Squarespace, Chris Shiflett, co-founder of the Brooklyn Beta Web Conference, and Whitney Hess, the lead consultant for Vicarious Partners user experience. They're not the only ones who see a big company built like they build the thing you're going to sell. Here are their best tips for building a strong company.1. Make a clear mission statement. Making a mission statement doesn't mean you have to put out your whole philosophy of life and plans for future growth. Casalena said watching Mark Zuckerberg's videos talking about Facebook in college was particularly enlightening. "It doesn't come out with this 'making the world more connected' stuff", he said. "I think if you attack a problem that is really, really, deep you will have the ability to discover these deeper missions in it." Hess said to remember that all companies exist to solve a problem. "Many companies they work with have a solution in mind, but they don't know what problem they're solving", he said. "If you don't know what problem you're trying to solve, why are you in business in the first place?" Hess said that when you advise companies on this—from four in-person surgeries to 30,000 people—you end up playing a role that's kind of like a group-therapist, helping employees communicate with each other. "It can be very easy to stop talking to other people with whom you manage the business in a meaningful way", he said. "Step back and say, "That's why we're here." Make sure every decision you make is here to support her. "2. Be flexible and disable the rules. A good guiding principle means you won't have to set any more stringent rules, said Arshad Chowdhury, CEO of Clear Gears employee performance auditing firm. Chowdhury is also the founder of MetroNaps, which rents spaces for workers engaged in taking Half-shift winches. He says less rules allows employees to set up their hours, and adjust their energy. This naturally includes the capacity to nap in the middle of the day. "A lot of rules we us are made to govern 2% of the population who could break those rules", he says. This usually applies to everything from dress code to hours worked. Having fewer rules is better. "Flexibility is also key", says Deb Nelson, executive director of the social venture network, which helps connect entrepreneurs who want to create a value-driven society." Initial business plans and financial projections are almost always works of fiction "She said." Make sure you're flexible and creative enough to come up with plans B, C, and D".He quoted Nobel laureate Muhammad Yunus, who tried lending primarily to men at Grameen Bank for several years but was unsuccessful.He finally grew flexible after seven years and found the winning formula: lending primarily to women. The privilege of having a small business is that you get to give every new hire full exposure to the entire operation even before they function officers. You'll lose this skill once the company grows, but it can build the foundation for a strong core, Casalena said. When you do the hiring, he said it is important to have someone who intervenes candidates who give a fair Pictu re of the company's performer, so the candidate doesn't get the wrong idea. "I think it's very important that the person doing the interview represents the company's values in a way that you think is valid", he said. He didn't say the hiring boost for a small company is that you can focus on the chemistry of all the employees. "At a small enough size, 10-12 people ... you can still have that candidate meet everyone on the team", she said. In the back. Aothewise, you risk shaking a functional dynamic." When you first primate a new person on a group that is so small, that has developed a friendship and that has been in friendship together, that can create alienation on the team", he said. "It may be the kind of beginning of the end, people can learn and people can grow, but it's much harder to change a personality". Casalena says she never hires candidates "maybe." "I like to put people in front of the Product and see if there are enthusiasts", he said. "If there are enthusiasts, we probably speak the same language," 4. Ask: Do you really need titles? The Northside panelists admitted the idea of ditch titles all together sounds a little new-age in the business world, but they said it's sometimes just the shakeup a company needs to feel innovative.Too many companies are caught in giving out fancy titles to employees without acknowledging that some people may hear pigeons in some roles for arbitrary titles, Shiflett said. That's what happens to them at Brooklyn Beta. "Sometimes I feel confined by "Web Developer". He joked that the term "craftsman web" feels more adaptable. "What is the problem that the titles solved?" He asked her. "Maybe there's some other way to get around." Even if you abandon the titles, it is still important to clarify the roles within the company. Nelson said that while it is important important A «Every staff member must be clear about what decisions are collaborative and what decisions will be taken from high leadership," says, A «It is also useful for those who do not work at the company know who is responsible for what" .hess says that the problem with concrete titles is that for start-up roles constantly change. Title in SA « then it is not so useful, "said Problem for him is that he blocks your capacity to change employee roles in the company without humiliating them publicly. For start-ups, he advises you to wait as long as possible before creating formal management positions. "They are a strange supporter of Benevola dictatorship," she says. A «You just have to make decisions and go ahead. The dialogue does not have to move forward to infinity. This is why the company is growing in the first place, "she said. "This doesn't mean they are great managers. Sometimes the best operators are the worst managers. "The executives."
