Xiaomi a 2025

The Xiaomi TV A 2025 55" (ELA5531GL) promises a compelling blend of 4K picture quality, immersive sound, and smart features at a competitive price point. This review details my experience after several weeks of using this Google TV, covering its performance, ease of use, and overall value. The ELA5531GL boasts a 55-inch 4K UHD display, Google TV operating system, Dolby Audio and DTS-X/DTS Virtual:X sound, a sleek metal finish, and a 360° Bluetooth remote. Out of the box, it comes pre-loaded with popular streaming apps like Netflix, Prime Video, and YouTube. The Google Assistant integration allows for seamless voice control, making navigation and app launching a breeze. The 4K display delivers crisp, vibrant images, showcasing impressive detail and color accuracy. While the 60Hz refresh rate isn't the highest available, it's more than sufficient for everyday viewing and streaming. Motion handling is generally smooth, although some minor judder might be noticeable in fast-paced scenes. The Dolby Audio and DTS sound systems create a rich and immersive soundscape, significantly enhancing the overall viewing experience. The Google TV interface is intuitive and responsive, making navigation a simple task. App launching is quick, and switching between apps is seamless. I tested the TV with a variety of content, including 4K HDR movies, high-definition shows, and standard definition broadcasts. The upscaling capabilities handle lower-resolution content reasonably well, although detail is naturally lost compared to native 4K sources. Gaming performance was also satisfactory with minimal input lag. The remote is comfortable to hold and easy to use. The 360° functionality is a welcome addition, ensuring the remote is always ready to use regardless of its orientation. Pros: Excellent picture quality for the price, immersive sound, user-friendly Google TV interface, sleek design, responsive remote. Cons: 60Hz refresh rate might limit performance for demanding gamers or those sensitive to motion blur, only one USB port. The Xiaomi TV A 2025 55" (ELA5531GL) delivers exceptional value for its price. The combination of a beautiful 4K display, impressive sound system, and the intuitive Google TV experience makes it a strong contender in the mid-range smart TV market. While the 60Hz refresh rate and single USB port are minor drawbacks, they are easily overshadowed by its numerous strengths. I highly recommend this TV to anyone looking for a reliable and feature-rich entertainment center without breaking the bank. Specification Value TV HDMI Ports 3 Video Format 4K Product Weight 14 KG Screen Size 55 in Refresh Rates 60Hz Colour Name Black Display Type LCD Operating System Android What's In The Box Xiaomi TV x 1,360° Bluetooth remote control x 1,Power cable x 1, Screws bag X 1,User manual x 1, Warranty cards x 1,Stand components x 2 Viewing Distance 3.2 m Streaming Services Netflix,YouTube,Disney+,Apple TV+,Starzplay Arabia,Qsm Streaming,Mbc Shahid ,Eros Now,Viu,Sonyliv,HBO Max Product Length 1226.4 mm Product Height 715 mm Product Width/Depth 81.7 mm Model Number ELA5531GL Model Name Xiaomi TV A 2025 55" Number of USB Ports 1 Number of HDMI Ports 3 Solid construction and buildMinor downgrade from previous modelThe Xiaomi TV A Pro 2025 is a bit of a head-scratcher. The older version of this budget QLED TV actually looks like a better TV, at least based on the specs. Although I didn't test the previous iteration, the latest 2025 model seems to have skimped on certain features. Notably, Dolby Vision is no longer supported on the new model, just HDR10. Other more minor downgrades include less powerful speakers (from dual 12W ones to dual 10W speakers), while the internal storage has also been reduced from 16GB to 8GB.To be fair, the pricing has also been revised. At \$\$799, it's a bit cheaper than last year's model, which now has a street price of \$S868. Perhaps Xiaomi is simply fine-tuning the market positioning for this budget TV series. In any case, the Xiaomi TV A Pro's current pricing is similar to last year's Xiaomi TV Q2 (I have seen it go for around \$S800 during a sale), which has Dolby Vision IQ, and looks a tad more premium, too.Quick specs4K resolution with HDR10 and HLG2x HDMI 2.0 ports, HDMI 2.1 (eARC)Comes in 43", 55" and 65" (tested) sizesGoogle TV platform with Google Assistant and Chromecast built-inBut to be honest, it doesn't really matter whether the TV supports HDR10 and/or Dolby Vision. Because this budget QLED TV is unable to reproduce the bright impactful visuals you associate with these HDR formats. The Xiaomi TV A Pro barely gets any brighter when displaying HDR content. There's also no Filmmaker Mode, just four picture presets: Movie, Standard, Sports and Vivid. I tested this TV mostly in Movie preset — colours look okay, but they don't stand out even when watching animated content. Blacks are decent, but obviously not as dark as those on a higher-end TV.The LED backlights are mainly around the edges of the TV, and fairly noticeable when viewing a solid background like the Google TV home screen. There's some dirty screen effect, though it didn't look too bad, with some banding mostly towards the left and right sides. There was hardly any subtle blooming, though crawling text looked a tad smeary. Viewing angles are good — colours do get washed out by a fair amount. Reflection handling is decent.Credit: Vincent Chang/Can Buy or NotThe Xiaomi TV A Pro comes with slim bezels and a metallic frame. The back of the TV feels solid with a unibody design. Most soundbars, including my Sonos Arc, will fit underneath the TV without any issues. The TV has three HDMI ports, of which two are HDMI 2.0 and the eARC is HDMI 2.1. These ports are all located on the left of the TV when the screen is facing. I didn't notice any cable management features.With its 60Hz refresh rate, the Xiaomi doesn't support 120Hz gaming with the latest game consoles. There's no Game Mode either with gaming-specific settings, but that's not surprising given the TV's budget price. Despite being downgraded somewhat, the speakers are all right if you're not too picky. They sound a bit hollow, there's not much bass, and there's some distortion at higher volumes.Credit: Vincent Chang/Can Buy or NotThe Xiaomi TV A Pro 2025 has the same remote control as previous Xiaomi TVs. It has useful shortcuts for Netflix, Prime Video, and YouTube. But I didn't like the placement of the Xiaomi TV+ shortcut, which I often mishit when trying to press the Back button. If you're really starved of content, the Xiaomi TV+ app offers free TV channels that I have never heard of. The user interface isn't as sluggish as some budget TVs I have tested. However, apps do take noticeably longer to load than more expensive models. I also found the initial TV setup to be rather slow-going, but then again, you're only doing that once. See Also As mentioned earlier, the Xiaomi TV A Pro 2025 is priced at \$S799 for the 65-inch model. The 43-inch version is \$S439, while the 55-inch costs \$S649. These prices may vary slightly due to sales. For example, it's currently at \$S759 for the 65-inch. All the TVs also come with three-years onsite warranty. However, the older Xiaomi TV Q2 seems to be in this price range, too, and it comes with slightly better specs. Both TVs, though, are very similar in overall performance. If you're not too particular about picture quality, audio, or don't intend to use it with a modern game console, the Xiaomi TV A Pro 2025 will be just fine. Reported By .Last Updated:May 21, 2025, 10:05 ISTXiaomi 15 is the latest compact flagship in the market that looks to show the value of a small-sized phoneXiaomi is facing a change in guard, which means the brand is now pushing beyond the comfort zone of being affordable, and aiming for the sky. The Xiaomi series is a clear evidence of this path with the Ultra model showing its ability to match up with the best. The Xiaomi 15 is another iteration in its strategy that looks to entice people with its quality, and assurance of giving value. There is going to be a lot of clamour for compact flagship phones this year, and Xiaomi has a definite leg up over its rivals in this regard. The Xiaomi 15 has Leica-powered cameras, flagship battery and a fast charging battery too but does the whole package give you that premiumness that the price tag commands. We went looking for these answers over the last few weeks. The Year Of Compact? Xiaomi 15 is a breath of fresh air in terms of its size, dimensions and such a relief to hold in the hand and sometimes even forget you have a phone in the pocket. The 6.36-inch display is the perfect form factor that more brands should adopt and 2025 could show us that happening widely. Brands have stressed on the need to use big-screen phones, because you watch movies and even read pieces. But this compact size slightly over 6-inch is the sweet spot to follow. Besides that, the Xiaomi 15 gets 8.5mm thickness and weighs around 192 grams which means it is not compact and not bulky either. The design balances out nicely and you don't feel the top being heavy by any means. The aluminium frame along with a glass body with IP68 rating gives you the ideal durability points that check most boxes. So, yeah, the compact flagships are here and welcome more brands to bring them to the market. The Other Flagship Pluses We've decided to combine the display quality and performance in the same segment because that's the least you expect from a phone that claims to be a flagship. It is powered by the Snapdragon 8 Elite chipset and you are getting the single 12GB + 512GB variant in the country. The SoC has shown its class, levels and what it can deliver with the right tuning and the Xiaomi 15 benefits from its grade to good effect. You can enjoy gaming albeit with some noticeable heating, one that dissipates quickly to ease the concerns. Having said that, you get a feeling the chipset has been throttled to give a balanced performance. The 6.36-inch AMOLED display with 120Hz adaptive refresh rate, as well as Dolby Vision and HDR10+ gives it the right viewing package. The 3200 nits peak brightness could have been slightly higher as readability in harsh sunlight can be a challenge. The screen itself delivers as highlighted in the specs and it performs well to your rough usage which involves keeping the phone with keys and coins in the pocket or a bag. That's where you have Xiaomi's Shield Glass showing its worth. The colours on the panel are bright, crisp and you will enjoy watching videos or shows for hours without feeling the weight of such long viewing. You get the HyperOS 2.0 version based on Android 15 with the Xiaomi 15 and the brand is promising 4 years of OS upgrades along with 6 years of security patches for the device. Xiaomi's update cycle has been sketchy over the years but we are hoping the flagships get better support from the company. The OS is lighter than the MIUI version but you still have to disable a few apps to stop them from throwing push alerts and ad suggestions for apps. Xiaomi also has a slew of AI features baked into the OS which we first got to try out on the 15 Ultra model this year and they work well too. Leica, Once Again Xiaomi 15 gets a triple camera setup using the Leica-powered lenses. The 50MP primary and a 50MP telephoto lens combined with the 50MP ultra-wide angle lens have shown their quality over the last few years and the new model is no different. The main sensor captures clear and crisp images with colour tones that are linked to the Leica ecosystem. The overall details are what you expect from a flagship-grade setup and the Xiaomi 15 delivers on most fronts. The 50MP primary and the telephoto sensors are able to shoot quality photos in both day and low light conditions. The portraits with the telephoto come out with good levels of detail and the skin textures are retained to give the natural effect.Out of the three, the ultra-wide lens continues to miss out on autofocus which makes it the less appealing in the system. It does well in normal lighting with the details clear but still expected better results, especially when it comes to low light imaging. The 32MP front shooter does better than the earlier models but the skin tones are still not clearly defined and natural even in the regular mode. Small But Not Weak Xiaomi 15 may be a compact phone but with its 5,240mAh battery it manages to last for well over a day on a single charge. We were slightly worried about its performance levels, especially with the noticeable warming up of the device but over a couple of weeks with the device we mostly got around 12-14 hours of standby time, after which we needed to charge it up using the 90W bundled charger. Swipe Left For Next VideoView allThese are definitely not the best figures in the market, especially the 20 hour PCMark battery score, but good enough for most people, who want to charge their phone once and use it the whole day and most parts of the night. The 90W charger takes around 50 minutes to go from 5 percent to 100 percent which works for most people. Xiaomi 15 is a compact phone with serious performance levels, a reliable and quality Leica camera system packed into a package with HyperOS getting between each iteration and a battery life that will work for most people out there. There are some throttling issues which result in warming up of the device but nothing that can be termed as a deal breaker. Aiming to deliver an unparalleled viewing experience to their consumers, Xiaomi just launched their newest line of TVs: the TV A 2025 Series and the Xiaomi TV A Pro 2025 Series.In this edition of VP Tech, we'll be diving into the Xiaomi A 2025 32-inch TV to see if it's worth being your next binge buddy.Design-wise, the Xiaomi A 2025 32-inch looks sleek and clean with its Metallic frame and bezel-less design. It is situated by two plastic stands on both sides, which means you need a decently large surface to make it stand.On its back, you get two HDMI ports, one USB 2.0 port, a composite In (AV), Ethernet, and one CI+ Slot. Meanwhile, it also comes with its remote with a classic Xiaomi layout. While there might be a lot of buttons, this remote couldn't get any more straightforward in terms of functionality.Overall, the Xiaomi A 2025 32-inch sports a design you would expect for smart TVs released in 2024. It's not the thinnest TV, but it has clean sides and edges perfect for that minimal aesthetic.Now the part we know you've been waiting for is its display and speakers. The Xiaomi A 2025 32-inch boasts a 4K HDR display with motion smoothing technology.Moreover, the TV can display over 16 million colors thanks to its richer color gamut. To make your viewing experience more immersive, Xiaomi has also integrated a Vivid Picture Engine that tunes colors, contrast, and depth ensuring that every detail is on point.While it's not the most saturated, you're getting a full HD display capable of delivering punchy colors and vibrant images for a very low price.We know a 60Hz display may seem low, but the Xiaomi A 2025 32-inch delivers a smooth viewing experience for its price. Gamers might need to think hard if they should go for this TV, but casual users will find it sufficient for all their streaming needs.Furthermore, the Xiaomi A 2025 32-inch has high-quality 20W Dolby Audio that elevates consuming content even more. Aside from Dolby Audio, it also supports DTS-X and DTS® Virtual:X Sound which gives it a more premium feel given its price.I often find myself gravitating towards playing music using the TV while I'm doing chores. Not only is the audio clear, but it's also immersive and deep which makes it not only a great viewing device but also a listening device. See Also Tablet and Mobile. TechnologyThe Xiaomi A 2025 32-inch comes with a Google TV that easily integrates into your lifestyle. Google TV even makes setting up the TV easier with the convenience of having an account. Now the TV can easily personalize content and shows that it'll show you when you use it.You can also integrate the TV with Google Home to make things smarter and more convenient. There's also a Google Assistant button on its remote that you can easily press to activate the feature.Moreover, the Xiaomi A 2025 32-inch runs a Quad-core A55 CPU with 1.56GB+8GB of RAM and storage. While we wish for bigger RAM for smoother performance, the TV holds up decently when we use it. There's a slight lag when shifting through apps, but it only happens from time to time — most of the time, never.I am shocked that a 32" Smart TV could cost only Php 7,695. Well, I guess that's Xiaomi's magic for ya! Given its price, the Xiaomi A 2025 32-inch has all the features you'd expect for a smart TV in 2024.Think of how convenient this would be for students in dorm rooms who want a budget-friendly TV. While there are things you could say are its limitations, its value-for-money makes it a good TV within its price point.AI Alert: The HONOR AI Eraser is set to roll out in SeptemberVP/Tech Review | realme Watch S2: A Well-Rounded SmartwatchVP/Tech | OPPO Reno12 F 5G: The AI Phone Within ReachNövel, derived from the Hungarian word meaning 'to enhance,' is your destination for dermatology and cosmetic surgical excellence. Starr Avenue, Philamlife Village Las PiñasMakati: Unit 2121 Centuria Medical Makati, Salamanca st cor. Kalayaan ave Makati Pampanga: No. 6 San Nicolas 1st, Guagua Pampanga The Xiaomi 16 is expected to be unveiled in late September, right after Qualcomm announces the Snapdragon 8 Elite 2 SoC that will be powering it. Ahead of that, today we have an alleged CAD-based sketch of the device to look at, showing us its design. As you can see, it's a refinement of the Xiaomi 15's design, with the squirrel camera island placed at the top left of the rear. It will interestingly be a two-tone design, which we can get a better idea of by looking at the render below, created based on the sketch above. So, overall, nothing really that's out of the ordinary, it just seems like a natural progression of Xiaomi's design language for its smallest flagship. According to past rumors, the Xiaomi 16 is getting a periscope telephoto camera, and a display size between 6.32" and 6.36". The Xiaomi 16 is apparently going to have an enormous 6,800 mAh battery with support for 100W wired charging. It's also claimed to have the best screen for a device of its size.
