Help Center Start your review of College Physics: A Strategic Approach Interesting thing about this book: it uses 'her' as the default (unmarked, whatever) pronoun sometimes. About half the time, I think. I wonder if this is deliberately to try and reduce the perceived masculine bias in physics, or just in general to try and change the way we use language.It's an interesting issue - on one hand, maybe we shouldn't be quibbling about such a small, unimportant matter. Maybe we should be trying to prove ourselves in other ways, ways that would show us to be equal to men, ways that would force everyone to respect us equally by showing them that we deserve it.On the other hand, how are we ever supposed to be equal if we are discriminated against in the language we use every day? Children growing up, learning to speak, are indoctrinated from their first overheard conversations to think that males are more important than females. How much of an effect does this have, though? It's hard to know, but I think it's more than you might expect. Language is so important, more so than I think a lot of people realise. It shapes the way we think, the way we behave, our actions, thoughts, feelings. It is everywhere and few things escape its influence.You may or may not have gathered that I think it's terribly important, extremely important, crucial even. Partly why I think this is because my one year's worth of introductory linguistics was enough to convince me that language is practically everything. Partly because I'm a feminist. Partly because the first time I encountered someone who used the feminine pronoun as the default (Edward DeBono), it really shocked me. It stood out so much. And that scared me. Because if it seemed so unusual, there must be something wrong here. But even if you agree that it is important, what then do you do? Do you use awkward blends like s/he, she-he, h'orsh'it (this was actually a serious suggestion, according to Limits of Language)? Do you go half and half like in the textbook that this review is ostensibly about? Do you use 'they', 'them' or 'their' instead, and watch in dismay as your grammatical constructions get increasingly messy? Do you use 'she'/her' all the time, muttering something about it being time for those damn men to get a taste of their own medicine? Or just because men can cope with a microscopic amount of language discrimination when they are favoured in so many other ways? What do you do?Incidentally, this is an excellent textbook. ...more 4.5 My friends make fun of me for having a favorite textbook, but I'm serious. This textbook makes physics, from Newton's laws to antimatter, digestible, logical, and applicable. My favorite parts are the little boxes describing how physics is used in medicine, biology, astronomy, and more. The most important strategies for solving physics problems are included, along with simple and understandable derivations of equations. Clean, elegant graphics and diagrams add valuable visual comprehension. 4.5 My friends make fun of me for having a favorite textbook, but I'm serious. I cannot recommend this book more and I want to own a copy.The only criticism I would offer is that I noticed that the illustrative images are kind of problematic. I'm pretty sure every single image depicts white people, and men are usually depicted in the active roles. While this may sound like nitpicky and SJW criticism, the research shows that these details can have a measurable impact on students and contribute to stereotypes. Note: I read the online version offered through Pearson, which has the added benefit of including video examples and reducing the anxiety induced by page numbers. Props to CSU for providing videos. ...more Considering I never wanted to take physics, I actually enjoyed the way this book approached the subject. The descriptions of how physics informed or applied to various other disciplines certainly made me appreciate it more. Over all a good book, but some material in this book are written confusing specially chapter 16. I had to read chapter 16, 17,18,19,20,21,22,23,24,25,26,27,28,29,30 I love then all. This was my physics II book. ♥♥♥♥♥♥♥♥ will miss my book,since it is end of semester but I still get to keep it until rest of my life. Knight, Brian Jones, Stuart FieldBook detailsTable of contentsIntended for algebra-based introductory physics courses. Built from the ground up for optimal learning; refined to help students focus on the big picture. Building on the research-proven instructional techniques introduced in Knight's P hysics for Scientists and Engineers, College Physics: A Strategic Approach sets a new standard for algebra-based introductory physics—gaining widespread critical acclaim from professors and students alike. The text, supplements, and optional MasteringPhysics ® work together to help students see and understand the big picture, gain crucial problem-solving skills and confidence, and better prepare for lecture and their future. For the Third Edition, Randy Knight, Brian Jones, and Stuart Field have incorporated student feedback and research to strengthen their focus on student learning, and to apply the best results from educational research and extensive user feedback and metadata. This program presents an unparalleled teaching and learning experience, uniquely effective and integrated. Personalize learning with optional MasteringPhysics: MasteringPhysics provides students with engaging experiences that coach them through physics with specific wrong-answer feedback, hints, and a wide variety of educationally effective content. Prepare for lecture: Prepare students for lecture with innovative and engaging media tools, tailored carefully to reinforce the textbook. Understand the big picture: Enable students to understand the connections between topics, the real-world context, and the overarching themes, skills, and principles of physics using refined and expanded learning tools. Develop problem-solving skills: Equip students with problem-solving tactics and strategies through expanded guidance and practice in the text and online in MasteringPhysics. Foster skills for the MCAT: Gear students up for the new MCAT with enhanced life-science and biomedical applications in the text and problems, and increased emphasis on reasoning with real-world situations and data.
