Cape landform locations

For other uses, see Chapter (disambiguation). A large promontory that extends into a water body, usually the Cape Cod sea and the islands off the coast of Massachusetts, from Cape Tianspace in the province of Mersin, lagoons of Capo Tindari and Marinello, Sicily In geography, a cloak is a large head or promontory that extends into a water body, usually the sea. [1] A mantle usually represents a marked trend change of the coast that makes them prone to natural forms of erosion, mainly tidal actions. This results in loops with a relatively short geological life. The leaders can be formed by glaciers, volcanoes and changes in the sea level. Erosion plays an important role in each of these training methods.
