Welcome to Battle Klaitek, a fantastic PvP map you won't want to miss! More specifically, this PvP map contains 3 large exciting arenas placed in different locations, each has its own game rule and battle style. You will start the game at a lobby where you and your friends can choose which area to attend first, or you guys can visit other rooms beforehand such as training arenas, map customization rooms, etc. Download this map from the links below to experience the very best PvP map with your friends! Screenshots: More details about the arenas: Classic - After entering the arena, you will appear in a random place around the map, your mission then is to collect things and equipment as quickly as possible then the zone is narrowed. Jungle - At the beginning of the match, you will appear on a platform located above the arena, thanks to this feature you can choose a landing site and build a strategy around it. The unusual point of this map is that you can climb very tall trees, taking up a very convenient position for long-range bow shooting, which makes the fight even more interesting! Second Moon - The gameplay in this arena is very similar to the well-known Deathmatch, you will change weapons every 20 seconds and your goal is to collect 12 points by killing the enemy. Please note that gravity is reduced in this arena (because you are on the moon!) How to install: Download the map from the link below. Extract the file you have just downloaded. Hold down Windows key, then press R key on the keyboard (or you can click Start, then type Run into search, after that click Run) Type %appdata% into the Run program, then press Enter. Sky Block map for Minecraft PE Sky Block is an unusual survival high in the sky on flying islands. The player appears on the main island with minimal initial resources. On some maps for Minecraft PE, some goals are considered to have been achieved. Christmas It's the old and most common Sky Block map for MCPE. A curious user can visit all 12 existing islands wholly covered in snow. You will need to explore all flying islands to feel the map's scale fully. There is also an exciting possibility on this map: you can make a cubic snowman. There's an infinite amount of snow. Lucky Block This map for Minecraft PE is almost the same as the previous one but still has its main feature. In this location, the player will visit a unique island containing a tree made of lacquer blocks. And the exciting thing is that this tree can be replanted. 40 islands There are more than 40 flying islands in the MCPE, each of which is different in its way. The player wakes up in some room in the story and doesn't remember how he got here. He finds some writing in the chest and then travels to the island to survive. It should also be noted that the map has its resource, which only improves the game's atmosphere. Unique islands Unlike others in MCPE, this map has unique islands, each of which is detailed. For example, once on an island with crystals, the player may think they have arrived at the Edge. Besides, there is a chest in the lobby where you can put things. After that, the item will disappear, and another will appear instead. Space skyblock The present version of the map on Skyblock locates in a boundless space. The islands of this location for Minecraft PE are planets that differ in size and biomes. The developer of this territory built only six planets but promised to add more in the future. These six islands include the ordinary world's planets, hell, land, ice, UFOs, and an asteroid cluster.
