(With Topical Questions & Answers)

Introduction

- Poultry industry in Kenya has developed tremendously due to the use of artificial incubation and brooding and easy availability of hybrid birds, both eggers and broilers.
- Poultry production has become an easy source of income and food for the rural as well as the urban communities.
- The term poultry includes domestic birds such as turkeys, ducks, geese, pheasants, doves and pigeons.
- Of late ostrich farming has become a lucrative activity.
- Poultry production starts with incubation of eggs.

Parts of an Egg

Parts of an Egg

- Forms 10-12% of the whole egg content.

PRECISION AGRICULTURE: PAST, PRESENT AND FUTURE

Antonio Compagnetti, Dipartimento dei Sistemi Agro-Ambientali, Università di Palermo, compagnetti@unipa.it

Summary

From 1979 the Global Positioning System, needed for setting the position of military targets in a battlefield, machinery, was developed as a pure military system, while in 1983 it was made available also for public use. Therefore, at the beginning of this precision agriculture, equipping GPS for setting the position in which any measured field parameter must be geo-referenced, was implemented for the first time in US. In fact, soil and crop parameters are spatially variable in a field, so that spatially variable rate crop input applications cause increased environmental impact and crop input waste. In order to reduce the environmental impact and optimize the use of crop inputs, precision agriculture was born: it is the geo-referenced application of crop inputs, whose rates must be those required by the crop.

At present a profitable implementation of precision agriculture, depending on the crop. Green Sustainable Product, can be achieved only in medium-large farms. As a consequence, precision agriculture is widespread only in large areas of US, Germany, Denmark, Netherlands and United Kingdom.

In the future precision agriculture could be implemented on a larger scale of the following requirements will be satisfied: to quantify its environmental and economic benefits; to develop common vehicle free standards (e.g. CAN-bus) on agricultural machines, sensors for mapping soil and crop parameters and user-friendly software for processing and interpreting the measured data; to use devices compatible among each other and an integrated user friendly software for all the spatially variable field operations; to develop soil-crop simulation models, in order to identify the causes of within-field spatial variability and, therefore, adjust the crop input rates from the next growing season.

Precision agriculture

Soil and crop parameters are spatially variable in a field. The spatial variability is the within-field variation of a parameter, that is the difference between its value measured in an area and its averaged value in the field. In these conditions spatially uniform rate crop input applications cause increased environmental impact and crop input waste.

The Neolithic Revolution, or the (First) Agricultural Revolution, was the wide-scale transition of many human cultures during the Neolithic period from a lifestyle of hunting and gathering to one of agriculture and settlement, making an increasingly large population possible. These settled communities permitted humans to observe and experiment with plants, learning how they grew ... Agricultural Engineers; 2001. The word agriculture is a late Middle English adaptation of Latin agricultūra, from ager 'field' and cultura 'cultivation' or 'growing'. While agriculture usually refers to human activities, certain species of ant, termite and beetle have been cultivating crops for up to 60 million years. Agriculture is defined with varying scopes, in its broadest sense using natural resources to ... 2018-02-06 - We currently don't have model section but the syllabus of Civil & Agricultural Engineering can be accessed from this page: ...
