Hier Abonnieren “After editing a presentation file when I try to save it as PowerPoint document, I receive an error like, ‘Error saving the document (name). Write error. The document could not be saved’. And I can save it with new name and manually rename it later. Due to this, some of the PowerPoint documents have got corrupt. Now, I want to know how to resolve this error and make presentation files readable again. Can anyone please help me out?” To open or edit presentation files, system should be installed with MS Office PowerPoint correctly. At times incorrect installation of Microsoft PowerPoint can cause different kind of errors with the documents being opened in it. Apart from wrong installation, there are other factors that may render errors while trying to open, edit, save or share presentation files. Unfortunately, occurrence of error when saving PowerPoint file is commonly seen among various users. PowerPoint may fail to save any document by displaying error messages like: File is corrupt and cannot be saved PowerPoint found an error that it can’t correct. You should save presentations, quit, and then restart PowerPoint Filename is currently in use. PowerPoint can’t modify it at this time This behavior can make users to lose data from edited PowerPoint presentation files as it avoids them from saving. However, error when saving PowerPoint documents can be solved by following any of these methods: Method 1: Save the file to new PowerPoint presentation After editing the document and error pops out, click cancel for saving option -> Click on Start and place the cursor at All Programs / Programs tab -> Choose Microsoft PowerPoint and open it as second window -> Go to View and click on Slide Sorter -> Now, switch to the presentation file that is opened and go to Slide Sorter under View menu -> go to Edit and click for Select All -> again go to edit and select Copy -> Switch to the freshly opened PowerPoint lane -> click on edit and Paste option -> Save this new document with different name. Method 2: To remove ActiveMovie control added to Microsoft Visual Basic userform in PowerPoint When error displays while saving PowerPoint document, avoid saving the file by clicking on cancel -> Go to Tools, select Macro and click Visual Basic Editor -> select user form with ActiveMovie control -> Further, in File menu click on Remove UserForm Name and click No -> Again go to File -> click on Close and Return to Microsoft PowerPoint and exit PowerPoint from File menu. These methods will fix error when saving PowerPoint presentation file, but if the file got corrupted after resolving the error or due to some other issue then try using online repair tool to regain its access. It saves to PP Show fine, and there doesn't appear to be anything functionally wrong with the presentation. However, the progress bar never moves when saving to video, even if I let it save overnight. No error message or anything. I've done this a hundred times successfully before so I don't see what is wrong with this instance. So, are there any troubleshooting tools I can run that would point me in the right direction? Or nuke the planet from space and start building the presentation over from scratch? Trying Leawo Power Point to Video converter and it's progress bar doesn't move, either. If there's a copyrighted photo with some type of copy guard here that won't allow the video to create I wish it would at least kick out an error message letting me know this so I can try something else. I'll just have to delete one pic at a time from the show and when it successfully saves to video that's the one which is copyright protected. First time I ever saw this one. Thank you, Chris 01-25-2016, 07:26 PM Novice Join Date: Jan 2016 Posts: 14 Fixed this problem, have another I recreated the slide form scratch and it saved to video. However now I want to append two presentations to make one. I need to find the Slide Finder Dialog Box, but the directions I found say this: ----- Combine presentations Open the presentation you want to add slides to. Tip If you are merging two presentations with an unequal number of slides, open the presentation with the greatest number of slides. On the Slides tab in normal view, click the slide thumbnail that you want the added slides to follow. On the Insert menu, click Slides from Files. Click Browse to look for the file. in the Browse dialog box, select the file, and then click Open. To preserve the current formatting of the slides you want to copy, in the lower corner of the Slide Finderdialog box, select the Keep source formatting check box. (When this check box is cleared, the copied slides assume the formatting of the slide they're inserted after.) Do one of the following:To insert selected slides, click the slides you want to insert, and then click Insert. To insert all the slides, click Insert All.Before clicking Close in the dialog box, you can browse for other presentations and insert more slides. -----I cannot find this Slide Finder dialog box and there's no Slides Form Files command in power Point 2016 under the Insert Menu? Anybody have any input? Thanks! 01-26-2016, 12:13 AM Programmer Join Date: Nov 2008 Location: UK Posts: 1,843 In the New Slide Menu in HOME choose “Reuse Slides”. The instructions you have are for version 2003. It would be a lot better to start a new thread with a descriptive name! 01-26-2016, 03:49 PM Novice Join Date: Jan 2016 Posts: 14 I found it, thank you! Yeah, I saw that later and was able to piece together my presentations. As for why the original wouldn't save to video I don't know but I recreated it from scratch. I wrote down all the animation timings and adjusted where necessary. Figure it would be easier and cheaper than to pay a Microsoft software architect \$100 an hour for two weeks to pore over the millions of lines of coding in the .pptx file to narrow down the offending segments of bits.... I still have the original slide that won't copy so maybe 10 years from now there'll be an app I can import it into and it do a scan on a bit level and could find exactly why it won't copy with a detailed explanation and equally detailed resolution.
