Reference #18.4e601502.1628859091.9b1a4b01 Icy Hot is a topical pain reliever used for minor arthritis pain, aching joints, sprains, bruises, cramps, and sore muscles. It's available over-the-counter as 14 different products with eight different formulations. Depending on the Icy Hot product you purchase, it can be applied to the affected body part as a patch, cream, gel, dry spray, stick, or sleeve. IAN HOOTON / Getty Images The active ingredients in Icy Hot formulations are either menthol alone, a combination of menthol and methyl salicylate, menthol and camphor, or menthol and lidocaine (a topical anesthetic). These ingredients cause a cooling sensation followed by a warming sensation ("icy" then "hot") that relieves pain. All formulations are suggested by the manufacturer for relief of minor pain associated with arthritis, simple backache, muscle soreness, strains, sprains, bruises, or cramps. All products are meant for external use only. Only a few studies have been conducted to investigate the clinical usefulness of such patches, and most of them have been of poor quality. Read the ingredients on the label, as they are different for similar-sounding Icy Hot products. Some concentrations are stronger than others. All Icy Hot products say that they are for adults and should not be used by children under the age of 12 unless approved by the child's doctor. The warnings on the label of the Icy Hot products state the following: Use only as directed. Avoid contact with eyes or mucous membranes. Do not apply to wounds or irritated, broken, or damaged skin. Do not bandage tightly or use with a heating pad. If you are prone to allergy from aspirin or salicylates, consult a doctor before using the formulations that contain methyl salicylate. Do not apply to skin folds. Do not expose the treated area to direct sunlight or heat. In the case of a severe burning sensation, discontinue immediately. In September 2012, the FDA warned consumers that topical pain relievers may cause first-to-third degree chemical burns where the product is applied. This applies to topical pain relievers (creams, ointments, lotions, and patches) including menthol, methyl salicylate, lidocaine, or capsaicin. There are a wide range of different products under the Icy Hot brand. The Icy Hot Back Patch has 5% menthol on an adhesive pad that is applied to the affected area, with different sizes (regular and XL) available for the back and other large body areas. An Icy Hot Back Patch can be worn for up to eight hours. Repeat up to three times daily. Another product, the Advanced Relief Patch, has 7.5% menthol and can be worn for up to 12 hours, once daily. The Icy Hot Lidocaine Patch has 4% lidocaine and 1% menthol. It can be worn for up to 12 hours, but you should wear only one patch on your body at a time. The Icy Hot Sleeve has 16% menthol in lotion on a flexible sleeve pad. The sleeve expands to fit 8 inches to 24 inches in circumference. The sleeve is generally used for the ankle, elbow, and knee joints. You can apply a sleeve for up to eight hours and up to three times daily. Follow directions for applying the sleeve correctly. Icy Hot Balm contains 7.6% menthol and 29% methyl salicylate, which are higher concentrations than other Icy Hot products (the label says the balm is "extra strength"). The product is applied to the affected area, massaged in until absorbed, and repeated up to four times daily. The balm is available in a 3.5-ounce jar. Icy Hot No Mess is a roll-on applicator. It is quick-drying and does not stain. The 2.5-ounce bottle contains 16% menthol as the active ingredient. Apply to the affected area and massage into the skin. Repeat up to four times a day. Another formulation (Icy Hot Lidocaine No Mess) is also available, which contains 4% lidocaine and 1% menthol. Apply to the affected area every six to eight hours, up to three times daily. Icy Hot Spray is a continuous spray formulation containing 16% menthol. The product dries quickly, so there is no need to massage it in after you spray the affected area. You can repeat up to three or four times daily. Another formulation (Icy Hot Lidocaine Dry spray) is available, which contains 4% lidocaine and 1% menthol. Spray the product on the affected area every six to eight hours, up to three times daily. These products are extremely flammable; do not use them when smoking or near heat or a flame. Read their labels for further instructions. Icy Hot Power Gel is a fast-acting, quick-drying formula with 16% menthol. Directions state that a thin layer of the product should be applied to the affected area, massaged into the skin, and repeated up to three or four times a day. Icy Hot Vanishing Scent comes in a 2.5-ounce tube with a sponge-top applicator. The active ingredient is 2.5% menthol. Directions state that the product should be squeezed onto the affected area. Then, using the sponge applicator, it should be massaged in until absorbed. It can be repeated up to a maximum of four times a day. The scent disappears quickly after application. Icy Hot Cream is a non-greasy formulation that works immediately on contact. There are three different versions of this cream: Icy Hot Cream contains 10% menthol and 30% methyl salicylate and is available in 1.25-ounce and 3-ounce tubes. Icy Hot Advanced Cream contains 11% camphor and 16% menthol, two higher concentrations for "max pain" relief. This is available in a 2-ounce tube. Icy Hot Lidocaine Cream contains 4% lidocaine and 1% menthol. It is available in 1.75-ounce and 2.7-ounce tubes. The products should be applied to the affected area, massaged in to promote absorption, and repeated up to four times daily. Icy Hot continues to innovate its delivery systems. These formulations are likely to change over time, with new ones added, old ones renamed, and less-popular forms discontinued. You may find store brands that are similar to Icy Hot, such as Walgreen's store brand Cool N Heat products. Compare those products for price and ingredients. Frequently Asked Questions How can you treat a chemical burn from icy hot? The best way to treat a chemical burn is to remove the offending substance by flushing with cool water for 15 minutes. You can the wrap the burn with a sterile bandage to protect it. Does icy hot help with inflammation? No, the purpose of icy hot is to create minor inflammation or irritation in one area to divert pain from another. If you are using the over-the-counter product to self-treat, read and follow all directions on the product package before using this medication. If you have any questions, consult your pharmacist. If your doctor has prescribed this medication, use it as directed.This medication is for use on the skin only. Apply to the affected area no more than 3 to 4 times a day. If you are using the cream, gel, or liquid, rub in gently and thoroughly. Some liquid forms of this medication should be shaken before use. Check the manufacturer's information for specific directions. Let the medicine dry completely before letting anyone else touch the area.Wash your hands well after applying unless you are using this medication to treat the hands. Avoid getting this medication in your eyes, nose, or mouth. If you do get the medication in those areas, flush with plenty of water.Do not apply to skin that is injured or irritated (such as skin that is cut, scraped, sunburned, infected, or has a rash). Do not bandage or tightly wrap the affected area. Doing so may increase the risk of side effects. You may cover the area loosely to protect clothing.Heat can increase the risk of side effects. Do not apply this medication right before, during, or after activities that increase skin temperature (such as bathing, swimming, heavy exercise). Wait until your skin has cooled before applying the medication. Do not use a sunlamp/tanning bed, hot water bottle, or heating pad/device on the treated area.Check the ingredients on the label even if you have used the product before. The manufacturer may have changed the ingredients. Also, products with similar names may contain different ingredients meant for different purposes. Read the label carefully to make sure you have the right product for you. Ask your pharmacist if you have any questions.Tell your doctor if your condition lasts for more than 7 days, or if it gets worse, or if it keeps returning. If you think you may have a serious medical problem, get medical help right away.
