Yoann Noail 11/21/2023 10:56 Trust Wallet is the official Binance crypto wallet app that you can use to store Bitcoin and other cryptocurrencies. You can use it to secure your crypto assets or earn interest on them, play blockchain games and access DApps and DeFi platforms. contents About Key features Use Installation on PC Cost Security What is Trust Wallet? Trust Wallet is a cryptocurrency software wallet owned by one of the biggest cryptocurrency companies worldwide, Binance. It provides everything you need to buy and exchange crypto in a secure environment. What are the key features of Trust Wallet? Buy and exchange: Trust Wallet is available in almost all countries, and it allows you to directly buy cryptocurrencies using your credit card, including Bitcoin, Ethereum, BNB, Litecoin, TRON, XRP, and Bitcoin Cash. You will also be able to exchange your tokens against other tokens using the app. You will see that it's really easy to start crypto with Trust Wallet. Staking: All blockchains need transaction validations, and some of them use what is called Proof-of-Stake consensus (PoS) to validate transactions, rewarding the people who staked. As a result, you can stake your coins on Trust Wallet and get automatic earnings. Become part of the network in a secure way, and earn tokens. You can stake lots of coins, including Binance Coin (BNB), TRON (TRX), Tezos (XTZ), Cosmos (ATOM), Terra (LUNA), VeChain (VET), Callisto (CLO), Osmosis (OSMO), Kava (KAVA), TomoChain (TOMO), IoTeX (IOTX), Algorand (ALGO), and many more are coming. Trust Wallet Lots of assets: Trust Wallet supports over 1 million assets, ERC-20 tokens, and over 50 blockchains, including Bitcoin Wallet (BTC), Bitcoin Cash (BCH), Litecoin (LTC), BitTorrent (BTT), Ethereum (ETH), Ethereum Classic (ETC), Doge Wallet and Theta, Tezos (XTZ), XRP, IoTeX, ZelCash, Qtum / Groestlcoin / Viacoin, Ontology, Cosmos (Atom), Dash Wallet (DASH), Filecoin Wallet (FIL), Polkadot Wallet (DOT), TomoChain (TOMO), VeChain Wallet (VET), Callisto (CLO), POA Network (POA), GoChain (GO), Wanchain (WAN), Icon (ICX), Binance Coin (BNB), Maker (MKR), Zilliqa (ZIL), OmiseGO (OMG), Holo (HOT), ChainLink (LINK), and many more. Stablecoins: You may know that stablecoins are used as a hedge against the high volatility of cryptocurrency markets and provide many advantages compared to fiat currencies, like faster transactions, lower fees, etc. That is why Trust Wallet supports many stablecoins, including Binance USD (BUSD), Dai (DAI), Tether (USDT), StableUSD (USDS), USD Coin (USDC), Gemini (GUSD), Paxos (PAX), TRUE USD (TUSD), GBP Stable Coin (BGBP), and Stasis (EURS). DeFi-friendly: You will be able to use your favorite decentralized applications and find new ones, and all of that without leaving Trust Wallet, including PancakeSwap, Uniswap, Sushi, Curve, and lots more. It is pretty convenient as you will keep everything you need in one safe spot. Trust Wallet Developer-friendly: Trust Wallet allows developers to build from the Trust Wallet Core and easily integrate their DApp into it. Secure: When creating an account, you will own the secret wallet key to restore your data whenever you want (It is strongly recommended to do your backup now and store it somewhere safe). Moreover, you will be able to set up a passcode so that only you can use the app. Once the app is installed and launched, you can either recover an existing wallet using your secret passphrase or create a new wallet account. If you want to create a new account, click on Create a new wallet. Please back up your recovery phrase and store it in a safe place. You're done, you can start buying crypto, making exchanges, and enjoying the app. Additional documentation is also available online. We provide you with both the Trust Wallet APK file and the BlueStacks emulator that will allow you to run the application on your PC: First, download and unzip the zip file we provide you at the top of the page; you will get both the emulator .exe file and the Trust Wallet .apk file. Follow the installation instructions you will find with the application file. Is it free? Yes, Trust Wallet is free to download and use. You will only have to pay blockchain transaction fees, but the app won't charge additional fees. Is it safe? Yes, Trust Wallet is safe to use. But keep in mind that nothing is 100% secure so make sure to follow the basic guidelines. You can also check their privacy policy. Download for iOS Download Extension Download APK Download for Android If you don't have access to the Google Play Store, you can install or update Trust Wallet on your Android device by downloading the APK directly from the official Trust Wallet website. The Play Store version of the Trust Wallet app and the APK are identical, meaning you get the same features, and same security. So this guide will give you the simple step-by-step process to install or update Trust Wallet on your Android Device, as well as how to switch back to the Play Store version. Installing or Updating with the Android APK: Step-by-Step Go to to open up the official Trust Wallet download page. Scroll down on the download page until you see the Download APK for Android option, then select it. Wait for the download to complete, then select Open. Select Install or Update (if you already have Trust Wallet installed and are simply updating). Note- If you don't see an option to Open and install/update Trust Wallet directly once the download is complete (as shown in the above screenshots), use the below steps to first locate the downloaded APK on your device, then complete the installation process. In the event that you don't see the downloaded Trust Wallet APK automatically once the download is complete, here's what to do: Locate your Files folder, and open it. This folder may also be called My Files or something similar. MULTI-CHAIN FUNCTIONALITY & THE LARGEST TOKEN Support Trust Wallet supports 100+ blockchains, and 10+ million assets including Bitcoin (BTC), Ethereum (ETH), Solana (SOL), (XRP) XRP, Cardano (ADA), Bitcoin Cash (BCH), BNB (BNB), Polygon (MATIC), Avalanche (AVAX), zkEVM, zkSync Era, and more. Manage NFTs from different blockchains easily in one place THE MOST EASY-TO-USE CRYPTO WALLET Helpful integrations like Coinbase Pay and Binance Pay to deposit crypto seamlessly from your exchange account in just a few clicks. Leverage our integrated tax feature, which is an optional tool for those who want to report their taxes without the usual complexity of manually adding transactions and wallets. Take advantage of our dApp browser and plug and play network auto-detect feature, which makes connecting to dApps across different blockchains quick and easy. ADVANCED FEATURES FOR CRYPTO TECHIES Dive into more advanced features (if you consider yourself a crypto techie) like adding custom tokens and adjusting your node settings. Use watch addresses to monitor all your crypto wallets in one place. A WALLET USED BY 200 MILLION PEOPLE Trust Wallet is used by over 200 million people worldwide and supports multiple languages. Securely store, send and receive crypto from family and friends, or your exchange account.
