Many people believe that their car is the largest single source of air pollution for which they are personally responsible. But in fact, the average home causes the emission of more than twice as much carbon dioxide--the principal greenhouse gas--as the average car. This is because most of the energy consumed in our homes is produced by burning fossil fuels like coal, oil, and natural gas. This pollution is actually a hidden cost for the energy We use, over and above the dizzying \$110 billion Americans spend each year on their home energy bills that's nearly \$1,300 per house. Much of this energy use is unnecessary because there are a variety of proven, widely available products on the market today (heating, cooling, appliances, windows, lighting, etc.) to drastically reduce your home's energy bills, and accompanying pollution. What's more, many of these products actually improve the comfort and livability of your home. 126 Cambridge St, Fredericksburg, VA 22405 (540) 369-3745 mrelectric.com Accessible customer support teamServices OfferedCeiling fan installationElectrical inspectionExterior lighting and securityHoliday lightingSmart home solutionsSurge protectionSmoke alarm installationOutlet installationEv charging installationGenerator installationAppliance repairElectrical repairEnergy efficiencyPanel upgrade and circuit breakerConstructionPool and hot tub electricalEmergency service Buri Electric provides comprehensive industrial electrical solutions throughout the Washington DC metro area, serving manufacturing facilities, warehouses, distribution centers, and heavy industrial operations across Maryland, Virginia, and DC.
