Causes of pain in penile urethra

Urethra is a very important part of the body. It is the duct through which the urine is eliminated, as well as the path to sperm to get out of the body in men. However, it's easy for this duct to become inflamed or infected, especially in women. Urethra opens outside the body to get out of urine, but bacteria and other foreign subjects can all enter easily from the other direction, leading to pain that can cause, at least, embarrassment, and extreme discomfort or pain at its worst . For women in particular, the use of fragrant soaps and lotions in the urethral area can lead to great problems. The main cause of these problems is urethritis or inflammation of the urethra. In most cases, this is a minor problem, simply a skin reaction to these products. Switch to a different soap can bring quick relief. The lotion should also be kept away from the genital area - there is no needed anyway. LDF / Getty Images Semen can irritate urethra in men and women. In a vast majority of these cases, the reason for this is improper hygiene after sexual relationship. Both women and men have to urinate after sex to free the urethra of any substance (including both the remaining seed and bacteria) that can have come into contact with it. They should also gently wash the area with water to avoid the accumulation of bacteria. Non-circumcised men should take special care to clean under the foreskin, as this is a common place for sperm to become trapped. Cactusoup / getty images just like the sperm itself can cause pain to the urethra, so it can the spermicide used to keep the sperm to survive inside a woman's body. Spermicides are a type of birth control applied inside the vagina before sexual intercourse. The chemicals within it prevent the sperm to be brought to the egg, but can also irritate the entire vaginal area. Chemicals can cause inflammation and pain in the urethra. Going to an alternative birth control method can help this problem. man at mouse / getty images gonorrhea is a sexually transmitted disease caused by neisseria gonoreee bacteria. This main cause of the pain of the urethra is often more serious than those previously mentioned. Together with the pain, the gonorrhea can cause a greenish yellow discharge from both the penis of a male than by a woman's vagina. It can cause pain in the rest of the pelvic area as well, along with itch and a burning feeling when urinating. Gonorrhea requires treatment from a doctor. DR MICROBE / Getty Images Trichomoniasis is a sexually transmitted parasitic disease that can cause pain to the urethra. It is only diagnosed by a doctor, who can prescribe an antimicrobial drug. Trichomoniasis causes itching, irritation and pain during urination for men and women. In women, it can also cause a jealous discharge with a strong and unpleasant smell. For men, the most distinctive symptom is penis discomfort. Designer491 / Getty Images Chlamydia is one of the most common sexually transmitted diseases to the world. It's also one of the most common causes of urethritis. It can lead to inflammation and pain in the urethra, as well as discharge. The ejaculatory pain in men and sexual intercourse in women is a common symptom. In some cases, however, it can be completely asymptomatic. Dr. Microbe / Getty Images No list of causes would be complete without the infamous urinary tract infection or UTI, an extremely common cause of urethral pain. The UTI occurs more in women than in men, because © female urethra is much shorter than the male, making it more vulnerable to infection by bacteria. Other symptoms of UTIs include urinary urgency and frequency, and blood. Treatment may include home remedies such as drinking cranberry juice, or a lap of antibiotics. katleho Seisa / Getty Images An obstruction in the urinary tract can cause urethra pain. Causes include urethral stricture (the narrowing of urethra in people who have had frequent UTIs or have used a catheter for a long time), an enlarged, enlarged prostatic gland,Tumors. Ovarian, uterine, bladder and prostate tumors can all cause tumors that premeno urethra, blocking it from completely emptying and making it difficult for urine to pass through. The treatment revolves around the cause of the obstruction. Malex92 / Getty Images Surprisingly, the drugs themselves can cause pain in the urethra. A drug that treats hypertension and angina can irritate the urethra. Radiation therapy can also cause a condition, radiation cystitis, which can become chronic. People suffering of his kind of pain of the urethra should consult a doctor to see alternative methods of treatment for their underlying conditions. PeopleImages / Getty Images The food would be the last of the list of suspected causes pain in the urethra. However, many common foods and beverages that we consume every day can lead to this symptom, including coffee, tea, orange juice and other acidic fruit juices, chocolate, products made from tomatoes, and carbonated drinks such as sparkling water or alcohol-free drinks. Altering your diet may be all you need to remove the urethral pain, but it's still a good idea to check with a doctor before making any major changes. izusek / Getty Images URL of this page: The pain is a signal in your nervous system that something may be wrong. It is an unpleasant feeling, like a cock, tingle, sting, burn, or pain. The pain may be sharp or dull. It can come and go, or can be constant. You may feel pain in one area of your body, such as the back, abdomen, chest, pelvis, or you may feel pain everywhere. The pain can be helpful in diagnosing a problem. If you've never felt pain, you could seriously hurt yourself without knowing it, or you may not realize you have a medical problem that needs treatment. There are two types of pain: acute and chronic. Acute pain usually comes quickly, because of an illness, injury or inflammation. It can often be diagnosed and treated. He usually goes away, although sometimes he can turn into chronic pain. The chronic pain lasts for a long time, and can cause serious problems. Pain is not always curable, but there are many ways to treat it. Treatment depends on the cause and the type of pain. There are drug treatments such as pain relievers. There are also non-drug treatments, such as acupuncture, physical therapy, and sometimes surgery. Contact a health care provider if you have questions about your health. The prostate and urethra problems can affect the smooth flow of urine in men. This booklet will give you a brief explanation of the different conditions of the prostate and urethra and as the urinary system can be influenced. There are a number of different conditions that can affect the prostate gland, including: Lush urethral urethra - the tube that urine exits the bladder - can sometimes become restricted. See separate sheet called Urethral stricture for details. Urinary tract infection One of the most common causes of urethral pain is the urinary tract infection. It is usually accompanied by other symptoms such as a frequent and urgent need to pass urine. Urethritis This is inflammation of the urethra. It is usually due to an infection that was acquired sexually, most commonly gonococcus. Again, other symptoms often accompany the urethral pain, such as a discharge from the penis or pain passing urine. See separate sheet Urethritis and urethral discharges in Men for more details. Trauma The most common type of urethra lesion is the insertion of a tube to drain the bladder (a catheter). You can request this procedure if urinary retention develops, usually due to the swelling of the prostate. Urethral hemorrhage can have a number of Causes. The infection is a common cause - both in connection with an infection of the urinary tract or associated with urethritis. It often has a blood in urine (Haematuria) rather than oozing of blood from the urethra. Trauma - injuries from a catheter can cause bleeding and pain. Cancer - urethral cancer is very rare in men. Bladder or kidney cancer is more common. Bleeding from the urethra can be noted, or blood in the urine. The treatment of urethra cancer is usually surgical. It can be necessary to completely remove the penis, even if in some cases it can be preserved. Many people have pain during and after the treatment of cancer. It can help you know that cancer pain can usually be treated successfully. Discover the causes of pain and how can be managed. Types of pain and how to discuss them with your doctor ways to relieve common self-care pain and concerns and other support options Download the free booklet of Asco, management of cancer pain in English and Spanish. This 36-page printable PDF provides information on the importance of pain relief, including its causes, as is diagnosed and the types of painkiller strategies. It also includes a pain monitoring sheet to help patients record how pain strikes them. Order printed copies of the English booklet from the Arche Store, Facebook Twitter LinkedIn Pinterest Urological conditions Diagnosis of cancer and screening of urological conditions Genital tumors refer to malignoes of penis, scrotum and urethra in particular, separated by malignant more known in urology as prostate, bladder and kidney tumors. Genital tumors in general are rare in North America and other western developed countries. However, these tumors can be of significant impact for life and body functions and therefore require an expert management. Penis's malignoes are mainly squamous cell carcinomas, although other penis cancers include melanomas, sarcomas and basal cell carcinomas. Various diseases of the penis and scrotum skin also occur that they must be differentiated as benign or malignant. The scrotum can also develop cancerous lesions, including extra-emammary paget disease that require proper diagnosis and management. Urethral tumors can occur in association with most commonly known tumors of the bladder, but can also arise distance inside the urethra as a state of separate disease. Treatments and services given the significant risk for life and health associated with genital tumors, these must be correctly identified and managed. A basic strategy is to correctly remove the disease, preserving all aspects of urinary and sexual function, as well as normal physical appearance. The diagnosis begins with an assessment of clinical history and physical examination, while also incorporates appropriate diagnostic tests when necessary. The processing can vary from local Topic therapies, to genital conservation interventions with more extensive excision with genital reconstruction. In some cases, additional therapies such as radiation and chemotherapy are needed. The specialists of the Urology Department have acquired a significant level of experience in managing these conditions and are ready to bring the best surgical offers and multidisciplinary management available. available.
