Mind map free template

Mind mapping is a technique for examining problems and developing strategies in a nonlinear way. Mind-map creation uses felt tip pens on flip-chart paper, markers on whiteboards or computer mind-mapping software. Completed mind maps have phrases, connecting lines, arrows and sometimes drawings. Mind maps types include problem solving, project and knowledge. A mind map is a useful tool to use during team brainstorming sessions when the goal is to generate ideas rapidly, without immediate logical review. Displaying the mind map continuously during the session allows team members to see the ideas generated, which stimulates more ideas. This process creates positive momentum for problem solving. A problem-solving brainstorming session starts with the guide or leader recording the problem in a phrase or small picture at the center of what will become the mind map. As team members participate with comments, the recorder draws colored spokes radiating from the core issue. Each spoke represents a different aspect of the issue and is labeled with a phrase or picture. As the session continues, the comments of team members result in the addition of smaller lines flowing from the spokes and of arrows illustrating connections between items on different spokes. Problem-solving mind maps are often used during just the single brainstorming session. Team members shout out their ideas, structure the map, set priorities and create action items. After the mind map facilitates this process, it is no longer needed. The life spans of problem-solving mind maps are often only few hours. Planning an event, planning a product launch, developing the strategy to close a large sale, and other activities can produce project mind maps. Updated periodically to reflect changes in project status, they live only until project completion. The life spans of project mind maps are normally just a few days or weeks. Knowledge mind maps contain information recorded once and kept for later use, sometimes replacing existing documents. Some are fine tuned and updated over time, while others are never updated. Mind maps describing company processes, sometimes including checklists, are examples of knowledge mind maps. Used multiple times over a long period, knowledge mind maps are important in preserving corporate history, the never-recorded knowledge existing only inside the heads of employees. Knowledge mind maps can be particularly helpful for new employees in discovering past processes for conducting recurring activities. The life spans of knowledge mind maps can be years. iPhone: Mind-mapping is an effective technique to take notes of your thoughts, but it can be a little difficult on the limited screen space of an iPhone. Mindly makes mind maps beautiful and easy on the small screen.Each element is a circle, which is linked to more elements around it in a circle; each of those elements, in turns, forms its own circle of elements. You can write your thought in any circle, give it a custom color, add an icon, and add notes. You can also have photos as circles, but there is no way to annotate them. At any point, you can view the full mind map, print it, or email it.The whole thing actually follows most of the principles in making good mind maps, like starting at the center, using one keyword per line, using colors and using images. It doesn't have the same flexibility as a paper and pen, but it's still usable for basic mind maps.Mind mapping is one of the best ways to capture your thoughts and bring them to life in visual...Read moreMindly (Free) | App Store via The Next Web Mind mapping expands on a central idea focusing on visually showing the structure and relationships of components of the central idea. Where a typical Microsoft PowerPoint presentation will explain each aspect of an idea on separate slides, a mind map will enable the entire idea to be viewed at once. The drawing tools in PowerPoint allow the creation of stunning mind maps to accentuate your presentations. Using Smart Art Brainstorming sessions are great, but sometimes you can drown in a thicket of ideas, half-concepts, and free-floating words. If that sounds familiar, you might want to consider a mind-mapping tool. Mind maps are digital flow charts that can be used to describe ideas and list possibilities. In more advanced forms, they can also be used to describe complex structures and concepts so your entire team can better understand them. Here are the best mind-mapping software options available, their most impressive strengths, and how you can download them for your next big meeting. MindMeister (free) MindMeister is a web-based mapping tool, and one of the best options if your team is utilizing multiple operating systems or works remotely. The map works in real time, which makes it ideal for long-distance brainstorming, and the presentation functions allow you to display complex ideas in a natural way, which is great for strategy development. If you're looking for more features, the software also works well with MeisterTask to create a workflow-oriented solution. MindMeister now offers a free version of its mind-mapping service, Basic, which includes: up to three mind maps, email support, and real-time collaboration. The premium service plans for MindMeister start at \$5 per month per user. Learn more at: MindMeister Coggle (free) Coggle is a Chrome-based extension that's focused on collaboration, so if you need to build a mind map with other people, this is the first option you should consider. The maps are simple, with a few different formats to choose from, though you can add images as necessary. The app also lets you make comments, chat, and view revision history, making it a fantastic collaboration tool if you're working with a large team. It also features robust compatibility with Google Drive and Google contacts, making it an easy choice for those already invested in Google's ecosystem. Learn more at: The Chrome Store Wisemapping (free) Wisemapping is a free, web-based mind-mapping option that's been around for years and remains a solid choice for building maps from the ground up. If you need a many-forked or detailed map for your work, you'll appreciate the many customization tools that Wisemapping provides, allowing you to turn simple tree-based maps into complex constructions. However, expect to spend a little time learning how to use all the Wisemapping tools, as they aren't as intuitive as some available options. Learn more at: Wisemapping Bubbl.us (free) Bubble.us no doubt got its name from the friendly, bubble-like node shapes that it uses to build diagrams. It's one of the friendly tools on our list for pure, personal brainstorming, allowing you to rapidly connect a bunch of thoughts before they vanish. They also have a fun collection of quick map templates for building websites, creating organizational charts, and so on. There aren't many customization options, but it's very easy to get started, and everything is free unless you want to pay \$5 per month for teamwork and sharing capabilities.
