Android textview html css style

This is one of those things that has always bothered me, but I never found the time to do and who is able to view the source code of a website on Android. For the most part I donâ t do any actual coding on my phone, but there are many circumstances in which I have to view the source code of a website while on my Android phone. As an SEO, being able to view the HTML source code on the fly is very important to me. I'm always analyzing websites, making suggestions, and help people with problems. As an SEO, there are many times when I Cana t get to a desktop and need to view the HTML source code or CSS on my Android phone. In some situations, we need to show as HTML text in Android. Here is the simplest solution to show HTML in TextView in Android. Step 1a: a Create a new project in Android Studio, go to File a new project and fill out all the necessary details to create a new project. Phase 2a A Add the following code TOA res / layout / activity_main.xml.
