Problems include smooth shooting screens not being displayed, disconnections between devices, and the inability to use One-Touch connection (NFC). The computer may also fail to recognize the product, and importing images becomes impossible. Viewing movies on a computer may be affected by noise, and exported images cannot be viewed on this camera. Additionally, formatting memory cards unintentionally, printing issues, and strange image colors are other potential problems. Furthermore, issues with the lens getting foggy, the device becoming warm during extended use, and the clock setting appearing when turning it on may occur. The product's settings can reset unexpectedly, and the number of recordable images may not decrease as expected. Moreover, the camera may experience difficulty handling certain situations, including messages warning of potential problems. Before using the camera, it is essential to check the model name, accessories supplied, and familiarize yourself with the names of parts. The power adapter, rechargeable battery pack, micro USB cable, shoulder strap, body cap, shoe cap, eyepiece cup, and instruction manual are all included. Additionally, the lens cap, rear lens cap, and lens hood should be kept track of. Lens FE 28-70 mm F3.5-5.6 OSS can be used from any angle and position to capture the scene clearly. The diopter-adjustment dial needs to be adjusted until the display appears clear in the viewfinder. To shoot, press the C3 (Custom 3) button, while for viewing, use the (Enlarge) button. The AF/MF/AEL switch lever controls the focus mode, and the rear dial adjusts the exposure compensation. When shooting, press the AF/MF (Auto focus/manual focus) button or AEL button, or use the C4 (Custom 4) button to control zooming. Press the MOVIE button to enter movie mode, and the Fn button to access other functions. The (Send to Smartphone) button is used to display the screen on a smartphone by pressing it. Use the Control wheel to adjust settings and press the (Delete) button for viewing photos. The Access lamp turns on when an external microphone is connected automatically. Given article text here The camera's settings and display are explained below. ##### Menu and Display Settings 4. Focal-length index 5. Lens contacts* (Do not touch this part directly.) It's ideal for action shots that require less autofocus reliance. The camera can display a histogram by pressing the DISP button, which cycles through different display settings. To change the date and time on the a7II, navigate to the MENU > (Setup) > (Date/Time Setup) and select the desired setting.
