PayPal is an Internet service that makes purchase online easy by saving private information, including addresses, credit card information and bank account numbers. The Internet service also offers a PayPal Plus credit card that works as a regular credit card and allows you to use your card wherever you are accepted Mastercard. It also allows you to take money from your PayPal account from an ATM. As with any credit card, the charges will be applied to your account when you withdraw cash from your credit card. Open the Internet browser and click the URL field. Type "paypal.com" and press the "Return" button on the keyboard. Enter your email address and password and click "Log In". Move the cursor to the "Retreat" tab and click "Transfer the bank account". Enter the total balance of your PayPal account in the Import field and select the bank account you want to send. Click the "Continue" button and click "Submit" to confirm the transaction. Visit a local ATM and enter your PayPal Plus credit card. Enter the PIN and press the Enter button. Tap the "Retreat" button on the ATM screen and select the "credit card" tab. Select the amount you want and select "Yes" or "No" to receive a receipt. Make sure you remove the PayPal card from the ATM card once you complete the transaction. Finding great art works for your next blog post or meme can be a challenge. And while there are a lot of sites that you can use to find pictures that is legally allowed to reproduce and/or edit, the latest addition to my list is CC Search, Creative Commons tool that is now officially out of beta. Jane Park, product and research director at Creative Commons, notes that the new research tool indexes about 300 million images, with much more on the road—Creative Commons’ has a high goal of indexing more than 1.4 billion authorized works. “CC Search images through 19 collections from open APIs and common Crawl dataset, including cultural works from museums (the Metropolitan Museum of Art, Cleveland Museum of Art), graphic drawings and artworks (Behance, DeviantArt), photos from Flickr, and an initial set of CC0 3D drawings from Thingiverse,” writes. The beauty of CC Search is that all you are looking for is free to use, until you respect from any variation of Creative Commons license the image uses. Understand that it’s easy. Start looking for what you want on CC Search. You can then use the Filter button to isolate below images using a particular license (if you are not well diversified in each, I suggest you have that Creative Commons license connect while you navigate the filter options),forget the “I want something I can...” downhill, both, which allows you to filter for images that you can commercially use or edit for anything you are trying to do. (Picking or grey option outside the “licences” “licences”of it as a simplified way to get to the essence of what the various licenses allow you to do.) You can also isolate up to only the image providers themselves. This is useful if you prefer to browse more Flickr amateur-shots than, say, pictures of laptops sitting in a museum (to use my example from the screenshot). 25 January 2018 The NIH Clinical Center is the largest clinical research hospital in the cuntry. Located in Bethesda, Maryland, the centre of... NIH Highlights 24 January 2018 ‘First in Human’, a three-part documentary series on the Discovery Channel, follows four patients at NIH’s... NIH Highlights 24 January 2018 When you volunteer to participate in clinical research, you help doctors and researchers learn more about the disease and improve the quality of life. Clinical Processes 13 October 2017 “Prima in Human”, a new documentary series from the Discovery Channel, follows four patients at NIH’s Clinical Center,... NI Evidence I read non-fiction, but I’d rather write humor. I am not perfect, nor am I consistent. It’s a work in progress. The difference between “CC” and “BCC” recipients The difference between CC and BCC in EmailCC stands for “Carbon Copy”, and allows all those people who “CC” to see who else sent the message. BCC stands for “Blind Carbon Copy”, and keeps anyone from seeing the rest of the list of people you’re sending your message. You have to think before you act on your new email knowledge to send power. CC and BCC can be used for secret, strategic email operations, and “with a lot of power comes a lot of responsibility”. That’s why I suggest you keep reading about how to use your new technology weapon. When to Use CC or “Carbon Copy”Think of Carbon Copy, or CC, as your invitation to other people to listen in your conversation with another person. When you use CC, you are directing your message to one person or group of people and then allowing another person or group of people to see that the conversation is happening. Here is an example. A: JohnCC: Ashley, Jimmy, Nikki, Bill, Wayne, Desmond, KimJohn, I noticed that your breathing is extremely horrible today, and I am sending you this email because I didn’t want to be exposed to the toxic smell of your rotten mouth by telling you in person. Please accept my condolences for the ugly asshole you ate for breakfast. I’ll send you \$5 to buy a toothbrush and toothpaste. Please use these two items daily. Honestly, Blake In this example, the sender is clearly CC’ing other people to warn them not to go near John today, and to inform them that the sender is working on the problem. This really helps the function to work more smoothly and efficiently. Unfortunately, John will know that you warned all these people about his terrifying breath, and his Could be hurt. If there was only one way to send the message to John and other colleagues without anyone seeing the list of people you are sending the message, then you might warn youothers without John’s knowledge. You shouldn't send more messages. Oh, wait! You're lucky; keep reading Blind Carbon Copying's messages. When using BCC or BCC "Blind Carbon Copy"Think as if you copy the message with a copyer and put each separately in the mail to different addresses. No one would know for certain whether the message was sent to others, unless they entered the mailboxes of others. Since you are e-mailing, which would mean hacking or snooping in other people's mailboxes. Your message goes to everyone as if you send separate emails; Nobody knows who got the message. You can use BCC for the times you want the message to be shared, but you want to keep secret who receives the message. Here is an example: A: Blake (You can enter your address here if you want)BCC: Ashley, Jimmy, Nikki, Bill, Wayne, Desmond, Kim, All of AmericaDear Person: (Don't be specific with greetings since you have several recipients) You won a new car from Blake Sweepstakes. All you have to do is answer this email and send me the numbers of your bank account, the social security number, the type of blood, the favorite color of snow, and what you had for breakfast today to claim your prize. Honestly, Blake Sweepstakes Prize Distribution In this case, if your name isn't Oprah, you're probably making a scam. But there might be legitimate reasons that you or your company would like to use discretion when sending information or making commercial communications. So the question remains if BCC is legal. Is BCC legal and/or ethical? The simple answer is yes, of course; otherwise email hosting companies would be on fire to facilitate criminal activity. The problem is that people can use BCC to help them do illegal, immoral or unethical things. Frauds and scams are nothing new, but this "newish" technology allows scam artists and phishers to do their job more efficiently. Think of the costs we would like to send a real virus to the real mail of the United States to infect millions of people. It is much easier and cheaper by email a virus to millions of computers worldwide. This is illegal, immoral, unethical and harmful according to most people with conscience. Be responsible for your BCC'ing and use it for good rather than for evil. Graph of decision for sending things CC Vs. BCCI Do you want me to, um... Should I go to BCC? Let everyone know who's included in the conversation YesNoDo something illegal Yes, so you get caught. No, you could get away with it longer. Protecting the privacy of the people I am sending a messageNo YesLet my boss knows something I'm doingMaybe, if the boss needs to knowMaybe, if the boss needs to know and doesn't want me toknow you're copying the message for your bossSend the same message to my two different husbands for Valentine's DayYes, if you're a polygamous and your husbands don't mind. Otherwise, you need to be more creative and individualize messages. No, you have to be more creative andyour messages. Tattle on people at work and being alienated from my colleagues YesWhat does carbon have to do with sending emails? The carbon card was used in the distant past to make copies of things that were written by hand or typed in real time. A piece of carbon coated paper was placed between paper sheets. The pen or pencil pressure rubs black carbon on the blank piece of paper resulting in "carbon copy". It was a fast technology to make copies or controls and legal documents. Like most technological things, language has not evolved faster. So, we humans use older terms to try to describe a new process. Then young people grow old and realize that they don't even know what carbon has to do with the manufacture of copies, and you get generational information and a language gap. Will you send Blind Carbon Copie really make people blind? Don't worry about making blind people when you send a BCC. It's a metaphor to keep things secret. This is an old story of wives / urban legend created to keep people participating in excessive BCC'ing. Actually, you're not going blind or you're gonna cause blindness, no matter how many people you have BCC, including yourself. Should Carbon Copy or Blind Carbon Copy by email link to this page? It depends on you. If you want to spread the word on the carbon copy and allow others to see who you sent the message, then you can CC a link to this page. If you want to send a link of this page to people without knowing who you sent it to, then use BCC. Your CC/BCC PreferencesExplanation of CC and BCC for People Who Can't Read This article is accurate and true for the best of the author's knowledge. The content is for informational or entertainment purposes and does not replace the personal advice or professional advice on business, financial, legal or technical matters. Blake Flannery (author) from United States on February 10, 2014: Great point Mike! This could create a bit of a sticky situation if you do not realize that the BCC will be included. Mike on February 10, 2014: It is also important to know that when you use "Reply All", your answer is not only go to the CC's you can see, but also any BCC that are unknown to you. Blake Flannery (author) from United States on May 05, 2012: Warren, The reason to use CC instead of typing everyone in the "To" is so that they stand out among those who expect to read and respond and those who just want to include as a kind gesture. If you are working on something that can be valuable to people beyond those directly working together, then you can allow others to be aware only in case those people want to be involved or help. You're right, if you're justsomething to a certain group of people, then there is no need for cc. It is just that some people in the business world need to know things without being really expected to answer your email. Warren on 05 May 2012: Why use cc when you can type all addresses in the field? I always wondered.Christopherson from Oklahoma, USA, March 26, 2012:I never used either of them because I had no idea what they were. I don't work for a company where emails are sent often. I'm happy to know what they are anyway because now I can use them in my personal life. My family is at war with itself, and I'm trying to become Switzerland... Wish me luck! lolMichael Kromwyk from Adelaide, South Australia March 24, 2012:I rarely use BCC Blake because I feel I should be honest with the recipient about who sent the email. One of my employees used the BCC all the time and I asked him to stop because it was very difficult to "keep the secret" and there was a lack of transparency within the company, especially if you adhere to the concept of "one team."
