H = high logic level, L = low logic level, X = irrelevant

Figure 1: Test circuit and output waveform. The test circuit shows a 5V DC source connected to two resistors (R) in series with an encoder. The encoder has three terminals: A, B, and C. The output waveform shows the voltage levels V_1 and V_2 for terminals A and B respectively, as the encoder rotates. The waveform is a square wave with a high level V_1 and a low level V_2 . The width of the high pulse is labeled t and 'ON', and the width of the low pulse is labeled t and 'OFF'. The sliding direction is indicated by an arrow.

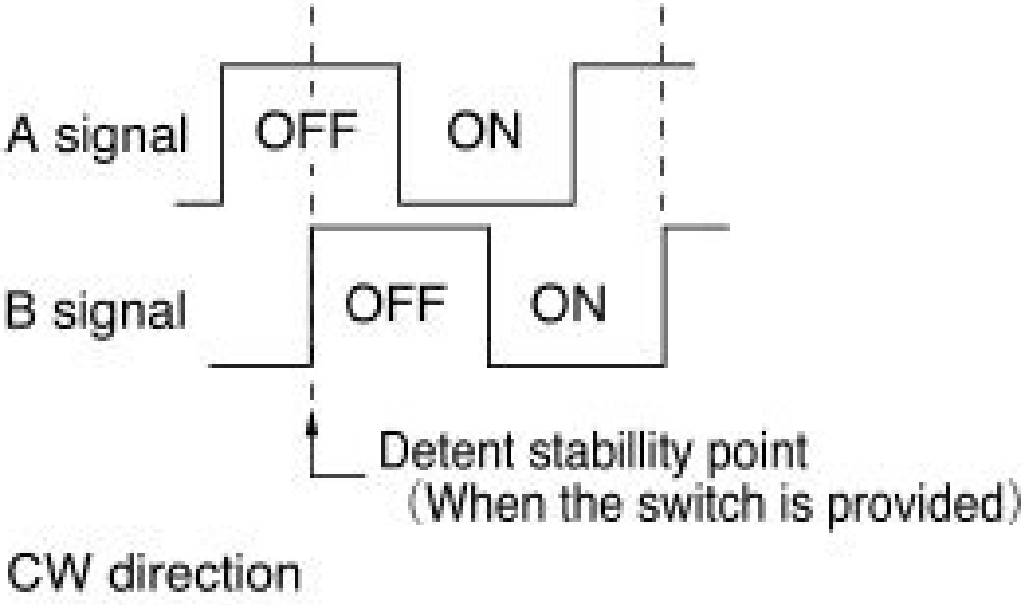

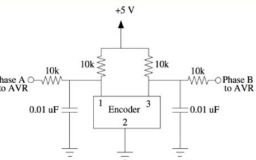

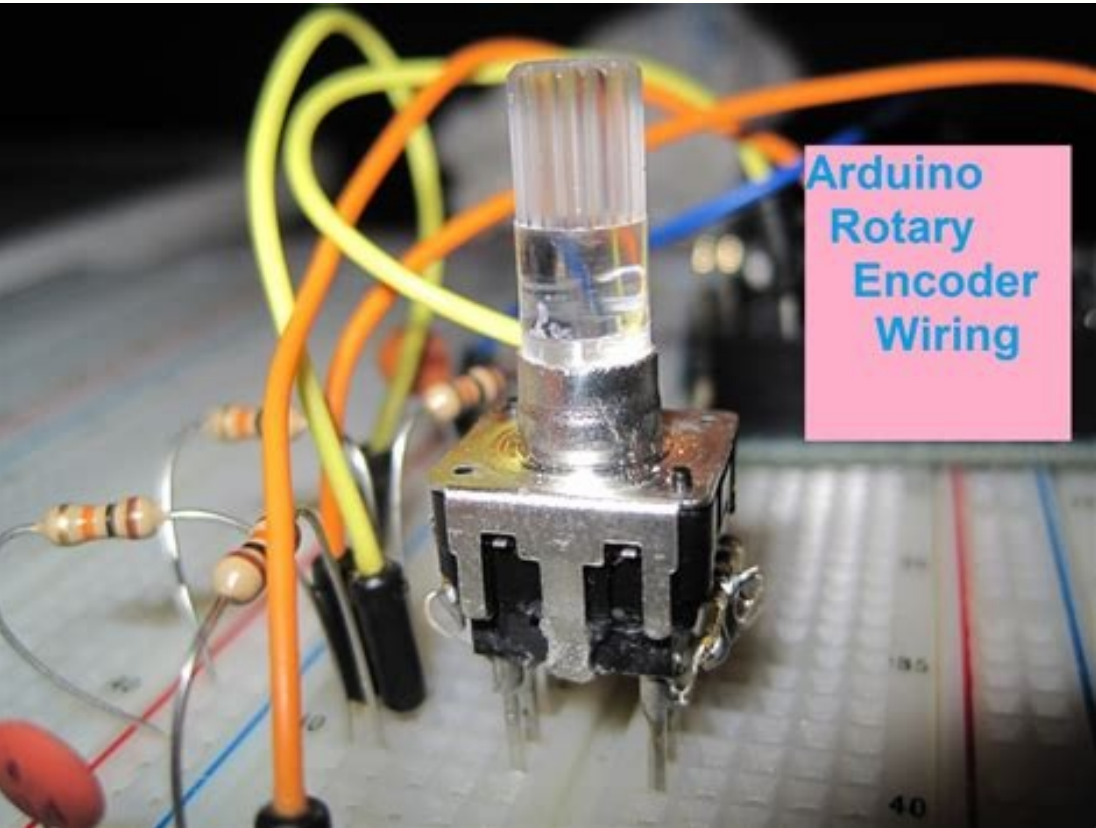

Figure 1 consists of two parts. The left part is a schematic diagram of the test circuit. It shows a 5V DC power supply connected to a series combination of two resistors (R) and an encoder. The encoder is represented by a dashed box containing three switches. The switches are connected to Terminal A, Terminal B, and Terminal C. Terminal C is connected to ground. The right part is a timing diagram showing the output waveform. The waveform is a square wave with a 5V amplitude. The period of the waveform is labeled t. The signal is labeled ON, OFF, and ON, corresponding to the sliding direction.
