Definition: A foot (symbol: ft) is a unit of length in the imperial and US customary systems of measurement. A foot was defined as exactly 0.3048 meters in 1959. One foot contains 12 inches, and one yard is comprised of three feet.History/origin: Prior to standardization of units of measurement, and the definition of the foot currently in use, the measurement of the foot was used in many different systems including the Greek, Roman, English, Chinese, and French systems, varying in length between each. The various lengths were due to parts of the human body historically being used as a basis for units of length (such as the cubit, hand, span, digit, and many others, sometimes referred to as anthropic units). This resulted in the measurement of a foot varying between 250 mm and 335 mm in the past compared to the current definition of 304.8 mm. While the United States is one of the few, if not only, countries in which the foot is still widely used, many countries used their own version of the foot prior to metrication, as evidenced by a fairly large list of obsolete feet measurements.Current use: The foot is primarily used in the United States, Canada, and the United Kingdom for many everyday applications. In the US, feet and inches are commonly used to measure height, shorter distances, field length (sometimes in the form of yards), etc. Feet are also commonly used to measure altitude (aviation) as well as elevation (such as that of a mountain). The international foot corresponds to human feet with shoe size 13 (UK), 14 (US male), 15.5 (US female), or 46 (EU).MeterDefinition: A meter, or metre (symbol: m), is the base unit of length and distance in the International System of Units (SI). The meter is defined as the distance traveled by light in 1/299 792 458 of a second. This definition was slightly modified in 2019 to reflect changes in the definition of the second.History/origin: Originally, in 1793, the meter was defined as one ten-millionth of the distance from the equator to the North Pole. This changed in 1889, when the International prototype metre was established as the length of a prototype meter bar (made of an alloy of 90% platinum and 10% iridium) measured at the melting point of ice. In 1960, the meter was again redefined, this time in terms of a certain number of wavelengths of a certain emission line of krypton-86. The current definition of the meter is effectively the same as the definition that was adopted in 1983, with slight modifications due to the change in definition of the second.Current use: Being the SI unit of length, the meter is used worldwide in many applications such as measuring distance, height, length, width, etc. The United States is one notable exception in that it largely uses US customary units such as yards, inches, feet, and miles instead of meters in everyday use.Foot [ft]Meter [m]0.01 ft0.003048 m0.1 ft0.03048 m1 ft0.3048 m2 ft0.6096 m3 ft0.9144 m5 ft1.524 m10 ft3.048 m20 ft6.096 m50 ft15.24 m100 ft30.48 m1000 ft304.8 m1 ft = 0.3048 m1 m = 3.280839895 ftExample: convert 15 ft to m:15 ft = 15 × 0.3048 m = 4.572 m Meter to Feet Conversion. The distance that light travels in 1/299 792 458 of a second is considered as one meter. 1 meter is also equal to 3.2808 ft. Abbreviation/Symbol: Meter is one of the base units for length in the international standards of units. The abbreviation or symbol utilized for meter is m. Current Use: Meter is used in various applications for measuring length, width, height, and distance. However, the United States has an exception in this scenario, as people there use other units like yards, inches instead of meters to calculate length or distance. Foot Definition: A foot is the base unit in the US customary measurement system and is defined as 0.3048 meters. There are 12 inches in a foot, and three feet is equivalent to one yard. Abbreviation/Symbol: A foot or feet in the plural is abbreviated and symbolized with ft., or single prime ` . Current Use: The foot is mainly used to measure the length, short distance, or height in most of the countries, especially the United States, United Kingdom, and Canada, etc. It is also used to calculate the altitude or elevation of mountains.
