Did you forget the Samsung DVR default password? Or maybe you think the password is correct but still doesn't work. You're at the right place. Samsung manufactures various models of DVRs, NVR, and IP cameras, that run on different firmware versions. However, most Samsung CCTV equipment use default usernames and passwords, the newer models may use default password. Read this article to understand the situation better. Samsung DVR default password: Use the default passwords listed below to access your Samsung DVR. Username: root and password: 11111111 Username: admin and password: 4321 Username: root and password: 1234567890. Once you log in to the DVR, it will ask you to create a new password. Additionally, update the firmware to patch any possible security bugs. Note: The default password can be exposed to a hacking thread so it is recommended to change the password after installing the product. The password must be 8-13 characters long and include 2 different types of characters (for example letter and number), including a special character to make it stronger. How to reset Samsung DVR The reset process on a Samsung DVR depends on the model. The password method shown below works for these models: SR-450, SRD-850, SRD-1650, SRD-1645D, SDR-5102N, SDR-4101, SDR-3300N, SDR-5102, SDR-C75300N, SDR-B3300N, SDR-B73300, SDR-C5300N, SDR-C5300N, SDR-C5300N/US, or any model names that start with SRD-XXX. So, If you forgot the password of the Samsung DVR, you can reset it by using one of the methods shown below. Turn on the DVR and have it connected to a monitor/TV Using the remote control, please press the DVR button (or Return if your DVR remote has no DVR button), then rapidly press Freeze > Alarm > Freeze > Alarm > Freeze Return. Once entered at an average pace the DVR will ask you if you want to load the factory settings. Select ok and all factory settings will be loaded. This will not delete any recorded footage. Samsung DVR Default Password Make sure to press the above sequence fast enough, if you're slower the DVR doesn't enter in the password reset mode. If you fail the first time, try again until you get it right. The picture below shows the buttons that need to be pressed. Important note: Resetting the password on a Samsung DVR doesn't erase the recorded videos, it just simply resets the admin account. Another way you can try is the following method: the hardest way, remove the power cord from the back of the DVR, wait 2 hours, put it back in, close the lid and connect the power back. It will be reset to factory default and all the footage will be erased. As we mentioned, this reset information doesn't apply to all Samsung recorders, either method could work or not at all. If after trying both ways you are still unable to log in to the unit, consider returning it to the supplier or seller (Hanwha Technwin or directly on Samsung SmartThings). They will then forward it to Samsung's service center, which can reset it via a master password. In today's world, security is paramount, and your Samsung camera system plays a crucial role in maintaining the safety of your property. However, forgetting your password can be an inconvenience, potentially locking you out and putting your surveillance capabilities at risk. Don't fret! This detailed guide will walk you through the steps to reset your password on your Samsung camera system, while also providing helpful tips to enhance your overall security experience. Understanding Your Samsung Camera System To begin with, it is essential to comprehend the purpose and functionality of your Samsung camera system before we dive into resetting your password. Samsung has designed various models of security cameras and systems that come equipped with distinctive features such as HD video quality, remote access, and advanced motion detection capabilities. These features allow homeowners and businesses to monitor their spaces efficiently. One of the vital aspects of your camera system is protected access. This ensures that only authorized users can access and view the camera feeds. However, if the password has been forgotten or compromised, it can become a hurdle in maintaining the intended security. Thus, having the knowledge of how to reset the password not only empowers you as a user but also enhances the security measures of your system. Reasons You Might Need to Reset Your Password Certain situations could necessitate a password reset. These can include: 1. Forgotten Password This is the most common reason individuals seek to reset their passwords. You may have set up the system months ago and simply forgotten the credentials. 2. Security Breach If you suspect that your system has been compromised or that someone may have acquired your password, it is crucial to reset it immediately. Protecting your surveillance system from unauthorized access is essential. 3. Multiple Users In environments with multiple users accessing the camera system, it can happen that passwords change frequently. Documentation and communication around password management become essential to avoid lockouts. Steps to Reset Your Samsung Camera System Password Resetting the password on your Samsung camera system can be achieved through several methods, depending on the model you own. Here, we will outline the most common approaches. Method 1: Via Web Interface If your Samsung camera system allows access through a web interface, you can reset your password with the following steps: Open a web browser on your computer and enter the IP address of your camera. You can typically find this address in the product documentation or by using the Samsung Smart Viewer application. Log in using your existing credentials. If you cannot remember your password, you can click on the "Forgot Password" link, if available. Follow the prompts, which may include verifying your email address or answering security questions, to reset your password. Once you reset your password, log in using the new credentials and ensure to save them in a secure location. Method 2: Factory Reset Sometimes a more aggressive approach is needed, especially if the web interface method fails. Performing a factory reset will restore all settings to their original conditions, erasing the password in the process. Important Considerations: Before performing a factory reset, make sure to back up any important data, as this will erase all configurations. Steps to Perform a Factory Reset Locate the reset button on your Samsung camera. This button is often a small, recessed button that requires a pin or a small tool to press. Press and hold the reset button for approximately 10-15 seconds until you see the camera indicators flash. This indicates that the device is resetting. Wait for the camera to reboot, after which all settings, including the password, will be restored to their default values. Refer to your manual for default credentials, and set a new password immediately after logging in. Method 3: Mobile Application Samsung also provides mobile applications that complement the functionality of the camera system. If your system supports it, follow the steps below: Download the Samsung SmartThings app on your mobile device. Open the application and log in with your credentials. If you've forgotten your password, select the "Forgot Password" option. Follow the prompts to reset your password. If you have access to your camera within the application, navigate to settings to change your password securely. Post-Reset Security Tips After successfully resetting your password, it's essential to implement best practices to guard against future issues. 1. Create a Strong Password Use a combination of uppercase letters, lowercase letters, numbers, and special characters. Avoid using easily guessable information such as birthdays or common words. A strong password enhances your camera system security. 2. Regularly Update Your Password Consider changing your password every few months. This practice significantly reduces the risk of unauthorized access to your camera system. 3. Enable Two-Factor Authentication If your Samsung camera system supports it, enable two-factor authentication. This adds an additional layer of security, requiring a second form of verification, such as a mobile phone code, in addition to your password. 4. Limit User Access If multiple users need access to the camera system, consider restricting permissions to avoid unnecessary risks. Regularly review user access and remove those who no longer require it. Conclusion Resetting your password on your Samsung camera system is an essential step in maintaining your security. By following the methods detailed within this guide, you can quickly regain access to your camera feeds and lock down your system against external threats. Keep in mind the importance of a strong, regularly updated password and actively practicing good security habits to ensure the integrity of your surveillance system. By taking these proactive measures, you can maintain peace of mind knowing that your property is being monitored securely. Stay vigilant, stay secure! What should I do if I forget my Samsung camera system password? If you forget your Samsung camera system password, the first step is to check if there's a password recovery option available in the camera's settings. Many systems provide a way to reset the password by answering security questions or sending a reset link to your registered email address. If that fails, you may need to perform a factory reset. However, before resetting, ensure you have a backup of any important data, as this process will erase all settings. If you're unable to access the system remotely, you may need to physically interact with the camera. Some devices have a reset button that can be pressed to restore factory settings, allowing you to set up your system from scratch. Make sure to check the system's user guide for specific details concerning remote access and password recovery. What happens if I reset my Samsung camera to factory settings? Resetting your Samsung camera to factory settings will restore the device to its original configuration. This means all custom settings, including your username and password, will be erased. You'll need to re-enter any configurations such as Wi-Fi settings, camera settings, and user preferences after the reset is completed. Additionally, consider that any stored data, such as recordings or snapshots saved on the device, may also be lost during this process. Therefore, it's crucial to back up any important files before performing a factory reset. Refer to the user manual for instructions on backing up data and restoring factory settings. How can I create a strong password for my Samsung camera system? To create a strong password for your Samsung camera system, consider using at least 12 characters that include a mix of uppercase letters, lowercase letters, numbers, and special symbols. Avoid using easily guessed information such as birthdays, names, or common words. A combination of random phrases or a passphrase can also enhance security. It's also advisable to change your password regularly and avoid reusing passwords across different devices and accounts. Additionally, enabling two-factor authentication, if available, adds an extra layer of security by requiring a second form of verification when logging in. Is there a way to retrieve my password without resetting the device? Typically, retrieving your password without resetting the device is possible if the Samsung camera system has a password recovery option built into its interface. Check the user manual or the camera app for any instructions on password retrieval. Often, you'll need to answer security questions or receive a verification code sent to your registered email or phone number. If these options are not available, unfortunately, the only remaining solution may involve resetting the device. While this may be a less desirable option due to the loss of settings and data, it is often necessary if you can't access the recovery options. What should I do after resetting my Samsung camera password? After resetting your Samsung camera password, it's important to immediately re-secure your camera system. Start by logging into the camera's interface with the new password and configure any necessary settings. Make sure to update your Wi-Fi credentials, if applicable, and restore any custom settings you had prior to the reset. It's also a good time to review your security settings. Consider implementing two-factor authentication and setting up security questions. Regularly updating your password and ensuring that your firmware is up to date can help enhance the overall security of your camera system as well. Username: root Password: admin Username: admin Password: admin Password:11111111 Username: admin Password: 4321 any hard reset button or password Messages 5,190 Points 113 Hi, if you use Samsung's "Wisenet Device Manager" utility and search your network does it find your Samsung devices? Some models may have a reset button, best to check the manual for the model number you have. Hi, We are facing issues with ip not found with the cameras while using wisenet device manager, ip installer and wireshare. Is there any tool or software to use to update this camera without accessing the GUI? Like the other vendors offer like a ntp server. The IP would likely be 'admin' for most DVRs or NVRs. The password would be either '4321' or '4321abcd'. To hard reset the latest SRD series, the only way to do so is to use the remote controller. Try pressing the buttons in the following sequence: Freeze - Alarm - Freeze - Return Try doing this a several times, with 10 seconds interval until it works, as the DVRs can be picky when it comes to accepting the signal from the remote controller. If you are successful, you should see the pop-up message on the monitor screen, indicating you to choose a new password. For the earlier generation SRD's, the method varies. You should refer to the manual, as the method should be stated, 100%. Reactions: rivo hi, so, i have a dvr samsung srd-1654 DP and i dont have a remote control, how can i reset to factory default or password reset? thanks in advance,Cosmin The ID would likely be 'admin' for most DVR's or NVR's. The password would be either '4321' or '4321abcd'. To hard reset the later SRD series, the only way to do so is to use the remote controller. Try pressing the buttons in the following sequence: Freeze - Alarm - Freeze - Return Try doing this a several times, with 10 seconds interval until it works, as the DVRs can be picky when it comes to accepting the signal from the remote controller. If you are successful, you should see the pop-up message on the monitor screen, indicating you to choose a new password. For the earlier generation SRD's, the method varies. You should refer to the manual, as the method should be stated, 100%. Hi, thanks a lot. This method works fine for me, I'm using NVR Samsung Technwin Series. Reactions: Phil hi, so, i have a dvr samsung srd-1654 DP and i dont have a remote control, how can i reset to factory default or password reset? thanks in advance,Cosmin Unfortunately, you can't reset without a remote control. based on experience, we can use other remote controls during the same NVR or DVR. for example, the type of remote control for SRN-1673 S can be used in XRN-1610S, I've tried it, and it works Good luck Reactions: Phil and cosmin Jenefay Aaron Updated on 04/29/2024 / Samsung Sometimes a complicated screen password or pattern can be a big trouble, because it is very easy to forget. When it happens that you are locked out of your Samsung device, do you know how to reset Samsung phone when locked? This article gives the answers with various ways to get access to a locked Samsung device. If your Samsung phone is locked for 30 minutes or forever, the first way we recommend for Samsung factory reset is Tenorshare 4uKey for Android. There are a lot of programs out there with the capability to reset a Samsung phone that is locked, but among them 4uKey for Android stands out the most. Besides resetting locked Android phone, this software also be able to bypass the FRP lock after you reset Samsung devices. You can find various positive feedbacks from users all over the world. Anyway, here's how to reset a Samsung phone (like S22/S21/S20) forgot password using this user-friendly tool: How to reset a samsungs phone that is locked and won't turn off or without home button/password: Download and install 4uKey for Android on your computer, then run the software and connect your Samsung mobile to your computer. Now, from the main interface, click "Remove Screen Lock" to bypass the password. Then, click "Start" button. The software will note you that it will erase all your data to remove the screen lock, just tap Yes to start it. Next, the removing process will be started. Then you need to enter your device into recovery mode and reboot the system. After that, the mobile will be restarted. This is a very simple procedure to bypass Samsung screen password. As you see in Step 3, if you have early Samsung devices, then choose "Remove Screen lock without Data Loss" you will get how to reset a samsung phone that is locked without factory reset and without losing data just like the below video shows: The second feasible option to reset password of Samsung mobile is Android Device Manager with Google account. It is very simple to reset phone password using the Device Manager. Here are several steps on how to reset a Samsung phone that is locked: First, you need to visit device manager site and then sign in to your Google account that has been logged in to your Samsung device before. In the Android Device Manager window, choose the device and then click on the "Erase Device" option and restore to factory settings without any password. The job is done! You can clearly see that it is very simple to use Android Device Manager to reset the password of Samsung mobile. Like "Find My iPhone" by iOS, Samsung has its own device locating feature called "Find My Mobile". This feature allows you to locate your device and also unlock your phone and reset the password. To successfully use it, you must have logged in to your Samsung account on your phone and enabled remotely unlock feature. Here is how to reset a samsung phone that is locked with Find My Mobile feature: Visit findmymobile.samsung.com/ from your computer or another mobile and sign in to your Samsung account. (Your phone should be connected to a mobile network and turn on location service.) Choose "Unlock" option to unlock the device remotely. Finally, enter your Samsung account password and then click on "Unlock" button. You can easily reset your Samsung mobile from Settings. But how do you reset a Samsung phone that is locked? It would still be possible to send the device into Recovery Mode and factory reset your Samsung devices with buttons. You must start by switching off your Samsung device and then boot it in to Recovery Mode. Hold the Volume Up and side buttons together for 10 seconds; you will get the software update screen. The phone will vibrate but not release the buttons. Later, when you get a "No Command" message, wait for a minute and the device will enter Recovery Mode. Now, in the Recovery Mode, using Volume Up and Down button and select Factory Reset. Confirm the command by pressing the power button. Lastly, confirm the command by selecting "Yes-Delete All User Data". After that, the device will be restored to factory settings. Then, choose "Reboot Now" and your phone will get restarted. It is a very simple procedure about how to factory reset a Samsung phone that is locked, but the steps can be a little different according to your phone models. Do you know how to reset a samsung phone that is locked google account? It is possible to use your Google Account to reset the password of the Samsung mobile? If you have Android 4.4 or lower version, then you can implement this method to reset the password of your Samsung device instead of using Android Device Manager. Here is how to reset a Samsung phone with your Google Account: Go to your locked Samsung phone and provide any random password or pattern for 5 times. After that a message will appear on the screen, tap on "Forgot Pattern". Then, you will be asked for your Google Account or Backup PIN. Choose Google Account and enter your email address. Enter your Password and Hold your phone for about 10 seconds. The status bar should flash signal that the camera is resetting. Release the buttons after the light flashes, release the button to wait for the Camera to Reboot. The camera will take a few minutes to make a new password. You'll know it's restarting when you feel a vibration. Note that the location of these buttons may vary depending on your device. Q2: How to unlock Samsung phone forgot password without factory reset? Simply use Tenorshare 4uKey for Android. This tool is particularly useful to unlock early Samsung without factory reset and without losing data. Q3: Why can't I access my phone after factory reset? It's due to the FRP (Factory Reset Protection) lock. This requires you to input your Google account information to log in after a reset. If forgotten, try a reliable tool to bypass Google Account verification after reset. Q4: How do you factory reset a frozen Samsung phone? You can try all methods below to force your Samsung phone to factory reset. For the quickest and simplest reset, 4uKey for Android is the perfect tool. How to reset a Samsung phone that is locked? All the mentioned methods like Find My Mobile, Google Account, Android Device Manager are effective. But there are some instances where they have failed. Samsung has emerged as a leading brand in this realm, offering security cameras that combine advanced features with user-friendly interfaces. However, there may come a time when you need to reset your Samsung security camera, perhaps due to a forgotten password or a need to enhance security. This article provides a comprehensive guide on how to reset your Samsung security camera, covering various models and scenarios. Understanding the Importance of Resetting Your Samsung Security Camera Resetting your Samsung security camera can be essential for several reasons. Common Scenarios Requiring a ResetForgotten Password: If you've lost access to your camera due to a forgotten password, a reset will allow you to start the setup process again. Network Issues: Frequent disconnections or inability to access the camera remotely may necessitate a reset to restore functionality.Before diving into the reset process, it's crucial to understand your camera model as different models may have specific steps.Types Of ResetsSamsung security cameras typically offer two types of resets: soft reset and hard reset. Understanding the difference between these can streamline your troubleshooting.Soft ResetA soft reset is typically performed to clear minor glitches without erasing your settings. This is often akin to rebooting your camera.Hard ResetA hard reset, on the other hand, restores the camera to factory settings, erasing all customizations you've made. This can be beneficial if you're selling the camera or want to troubleshoot more significant issues.Step-by-Step Guide To Reset Your Samsung Security CameraIn this section, we'll go through the step-by-step methods to reset your Samsung security camera, providing you with clear instructions whether you choose a soft or hard reset.How To Perform A Soft ResetPower Off the CameraUnplug the power source from your Samsung camera.Wait for 10 SecondsAllow the camera to rest for at least 10 seconds.Power On the CameraReconnect the power source to the camera back on.Your camera should reboot, allowing it to reconnect to the network.If issues persist, consider performing a hard reset.How To Perform A Hard ResetThe process for performing a hard reset can differ slightly depending on your camera model. Below we outline the general steps for most models:Identify the Reset ButtonMost Samsung security cameras come with a reset button. This is typically located at the back or bottom of the camera.Follow These StepsTo Hard Reset:Locate the Reset ButtonUse a pin or a paperclip to press the reset button, which is often a small, recessed button.Hold the button for about 10 to 15 seconds until you see the camera's lights blinking.This action will reset the camera settings, including the password.Wait for the camera to reboot, and the password should now be reset to the default one set by the manufacturer.If you're unable to access the camera remotely, you may need to physically interact with the camera. Some devices have a reset button that can be pressed to restore factory settings, allowing you to set up your system from scratch. Make sure to check the system's user guide for specific details concerning remote access and password recovery. What happens if I reset my Samsung camera to factory settings? Resetting your Samsung camera to factory settings will restore the device to its original configuration. This means all custom settings, including your username and password, will be erased. You'll need to re-enter any configurations such as Wi-Fi settings, camera settings, and user preferences after the reset is completed. Additionally, consider that any stored data, such as recordings or snapshots saved on the device, may also be lost during this process. Therefore, it's crucial to back up any important files before performing a factory reset. Refer to the user manual for instructions on backing up data and restoring factory settings. How can I create a strong password for my Samsung camera system? To create a strong password for your Samsung camera system, consider using at least 12 characters that include a mix of uppercase letters, lowercase letters, numbers, and special symbols. Avoid using easily guessed information such as birthdays, names, or common words. A combination of random phrases or a passphrase can also enhance security. It's also advisable to change your password regularly and avoid reusing passwords across different devices and accounts. Additionally, enabling two-factor authentication, if available, adds an extra layer of security by requiring a second form of verification when logging in. Is there a way to retrieve my password without resetting the device? Typically, retrieving your password without resetting the device is possible if the Samsung camera system has a password recovery option built into its interface. Check the user manual or the camera app for any instructions on password retrieval. Often, you'll need to answer security questions or receive a verification code sent to your registered email or phone number. If these options are not available, unfortunately, the only remaining solution may involve resetting the device. While this may be a less desirable option due to the loss of settings and data, it is often necessary if you can't access the recovery options. What should I do after resetting my Samsung camera password? After resetting your Samsung camera password, it's important to immediately re-secure your camera system. Start by logging into the camera's interface with the new password and configure any necessary settings. Make sure to update your Wi-Fi credentials, if applicable, and restore any custom settings you had prior to the reset. It's also a good time to review your security settings. Consider implementing two-factor authentication and setting up security questions. Regularly updating your password and ensuring that your firmware is up to date can help enhance the overall security of your camera system as well. Username: root Password: admin Username: admin Password: admin Password:11111111 Username: admin Password: 4321 any hard reset button or password Messages 5,190 Points 113 Hi, if you use Samsung's "Wisenet Device Manager" utility and search your network does it find your Samsung devices? Some models may have a reset button, best to check the manual for the model number you have. Hi, We are facing issues with ip not found with the cameras while using wisenet device manager, ip installer and wireshare. Is there any tool or software to use to update this camera without accessing the GUI? Like the other vendors offer like a ntp server. The IP would likely be 'admin' for most DVRs or NVRs. The password would be either '4321' or '4321abcd'. To hard reset the latest SRD series, the only way to do so is to use the remote controller. Try pressing the buttons in the following sequence: Freeze - Alarm - Freeze - Return Try doing this a several times, with 10 seconds interval until it works, as the DVRs can be picky when it comes to accepting the signal from the remote controller. If you are successful, you should see the pop-up message on the monitor screen, indicating you to choose a new password. For the earlier generation SRD's, the method varies. You should refer to the manual, as the method should be stated, 100%. Reactions: rivo hi, so, i have a dvr samsung srd-1654 DP and i dont have a remote control, how can i reset to factory default or password reset? thanks in advance,Cosmin Unfortunately, you can't reset without a remote control. based on experience, we can use other remote controls during the same NVR or DVR. for example, the type of remote control for SRN-1673 S can be used in XRN-1610S, I've tried it, and it works Good luck Reactions: Phil and cosmin Jenefay Aaron Updated on 04/29/2024 / Samsung Sometimes a complicated screen password or pattern can be a big trouble, because it is very easy to forget. When it happens that you are locked out of your Samsung device, do you know how to reset Samsung phone when locked? This article gives the answers with various ways to get access to a locked Samsung device. If your Samsung phone is locked for 30 minutes or forever, the first way we recommend for Samsung factory reset is Tenorshare 4uKey for Android. There are a lot of programs out there with the capability to reset a Samsung phone that is locked, but among them 4uKey for Android stands out the most. Besides resetting locked Android phone, this software also be able to bypass the FRP lock after you reset Samsung devices. You can find various positive feedbacks from users all over the world. Anyway, here's how to reset a Samsung phone (like S22/S21/S20) forgot password using this user-friendly tool: How to reset a samsungs phone that is locked and won't turn off or without home button/password: Download and install 4uKey for Android on your computer, then run the software and connect your Samsung mobile to your computer. Now, from the main interface, click "Remove Screen Lock" to bypass the password. Then, click "Start" button. The software will note you that it will erase all your data to remove the screen lock, just tap Yes to start it. Next, the removing process will be started. Then you need to enter your device into recovery mode and reboot the system. After that, the mobile will be restarted. This is a very simple procedure to bypass Samsung screen password. As you see in Step 3, if you have early Samsung devices, then choose "Remove Screen lock without Data Loss" you will get how to reset a samsung phone that is locked without factory reset and without losing data just like the below video shows: The second feasible option to reset password of Samsung mobile is Android Device Manager with Google account. It is very simple to reset phone password using the Device Manager. Here are several steps on how to reset a Samsung phone that is locked: First, you need to visit device manager site and then sign in to your Google account that has been logged in to your Samsung device before. In the Android Device Manager window, choose the device and then click on the "Erase Device" option and restore to factory settings without any password. The job is done! You can clearly see that it is very simple to use Android Device Manager to reset the password of Samsung mobile. Like "Find My iPhone" by iOS, Samsung has its own device locating feature called "Find My Mobile". This feature allows you to locate your device and also unlock your phone and reset the password. To successfully use it, you must have logged in to your Samsung account on your phone and enabled remotely unlock feature. Here is how to reset a samsung phone that is locked with Find My Mobile feature: Visit findmymobile.samsung.com/ from your computer or another mobile and sign in to your Samsung account. (Your phone should be connected to a mobile network and turn on location service.) Choose "Unlock" option to unlock the device remotely. Finally, enter your Samsung account password and then click on "Unlock" button. You can easily reset your Samsung mobile from Settings. But how do you reset a Samsung phone that is locked? It would still be possible to send the device into Recovery Mode and factory reset your Samsung devices with buttons. You must start by switching off your Samsung device and then boot it in to Recovery Mode. Hold the Volume Up and side buttons together for 10 seconds; you will get the software update screen. The phone will vibrate but not release the buttons. Later, when you get a "No Command" message, wait for a minute and the device will enter Recovery Mode. Now, in the Recovery Mode, using Volume Up and Down button and select Factory Reset. Confirm the command by pressing the power button. Lastly, confirm the command by selecting "Yes-Delete All User Data". After that, the device will be restored to factory settings. Then, choose "Reboot Now" and your phone will get restarted. It is a very simple procedure about how to factory reset a Samsung phone that is locked, but the steps can be a little different according to your phone models. Do you know how to reset a samsung phone that is locked google account? It is possible to use your Google Account to reset the password of the Samsung mobile? If you have Android 4.4 or lower version, then you can implement this method to reset the password of your Samsung device instead of using Android Device Manager. Here is how to reset a Samsung phone with your Google Account: Go to your locked Samsung phone and provide any random password or pattern for 5 times. After that a message will appear on the screen, tap on "Forgot Pattern". Then, you will be asked for your Google Account or Backup PIN. Choose Google Account and enter your email address. Enter your Password and Hold your phone for about 10 seconds. The status bar should flash signal that the camera is resetting. Release the buttons after the light flashes, release the button to wait for the Camera to Reboot. The camera will take a few minutes to make a new password. You'll know it's restarting when you feel a vibration. Note that the location of these buttons may vary depending on your device. Q2: How to unlock Samsung phone forgot password without factory reset? Simply use Tenorshare 4uKey for Android. This tool is particularly useful to unlock early Samsung without factory reset and without losing data. Q3: Why can't I access my phone after factory reset? It's due to the FRP (Factory Reset Protection) lock. This requires you to input your Google account information to log in after a reset. If forgotten, try a reliable tool to bypass Google Account verification after reset. Q4: How do you factory reset a frozen Samsung phone? factory settings: Resetting your camera to its factory defaults can be useful if you want to start afresh or eliminate any customized settings that might be causing issues. Step-by-Step Guide to Resetting Your Samsung Security Camera Resetting your Samsung security camera involves a series of straightforward steps. Follow the guide below to reset your camera successfully. Locate the reset button: The location of the reset button may vary depending on the camera model. However, most Samsung security cameras have a small reset button either on the back or bottom of the device. Press and hold the reset button: Using a pointed object such as a paperclip or pin, press and hold the reset button for approximately 10 seconds. Make sure you apply consistent pressure throughout the duration. Release the reset button: After 10 seconds, release the reset button. Your camera will now initiate the reset process and return to its default settings. Wait for the reset to complete: Give your camera a few moments to reset and restore its factory defaults. This process may take a minute or two, depending on your camera model. Reconfigure your camera settings: Once the reset is complete, you will need to reconfigure your camera settings according to your preferences. This includes setting up a new admin password, adjusting video quality, and any other desired customizations. Additional Considerations for Resetting Your Samsung Security Camera While the steps mentioned above provide a general guideline for resetting most Samsung security camera models, there are a few additional considerations to keep in mind: Power source: Ensure that your camera is connected to a stable power source during the reset process. Sudden power loss during a reset can lead to incomplete or failed resets. Backup configurations: Before resetting your camera, consider backing up your current configurations if necessary. This can help you restore your previously customized settings easily. Network connectivity: After the reset, ensure that your camera is connected to your desired network to facilitate remote access and monitoring capabilities. Recorded footage: Resetting your camera will not delete any previously recorded footage stored on your DVR or NVR system. However, it is always recommended to back up important recordings regularly. By following these instructions and considering these additional tips, you will be able to reset your Samsung security camera and restore it to factory settings without any complications. Conclusion Resetting your Samsung security camera can serve as an effective troubleshooting method, whether you're dealing with forgotten passwords, system glitches, or the need to restore factory defaults. By adhering to the step-by-step guide provided in this article, you can easily reset your camera and regain control over your surveillance system. Remember to consider the additional tips mentioned to ensure a successful reset process. With a fully reset Samsung security camera, you can continue to monitor and protect your property with confidence. Samsung security system password fix Frequently Asked Questions How do I reset my Samsung security camera to its factory settings?
