If you are planning to use a calendar to promote your Christmas holiday sales, this calendar will come in handy for you. If you are making a social media scheduling application or email automation schedule tool, calendar like this will be very useful. As smart home devices with a screen are becoming popular, giving widgets and application like this will be easy for the users to see the date and time at a glance. This calendar is treated as a mobile application with simple swipe gestures. On the clean white layout, the colorful dots used to indicate the events will easily get user attention. You can take this concept and use it to make it even more engaging for the users. The only small bummer with this calendar is you don't have the option to jump between different years, other than that this calendar is a perfect one. Depth effects and neat fonts make interactions easy on this calendar. But, you have the option to turn on/off the night mode. For example, calendars help you see your workout routine in a workout app and helps to pick a date in a ticket reservation site. You can either use this as a calendar application or in your existing mobile application. Tabs are given in the main calendar to easily switch between month view and week view. Info / Download Demo Calendar If you are looking for a basic calendar with all the fundamental options in a proper working condition, this code snippet will help you. Info / Download Demo CSS-only Calendar App Concept As the name implies, this calendar is a mobile application concept. Since it is an HTML template, the entries are not stored properly, but the creator has given you a clear UX idea of how the calendar works. Info / Download Demo It's A Calendar Sort Of Thing This calendar is almost similar to the Calendar In ReactJs mentioned above. At a glance, the user can infer the schedule they have made for that day. Since it has a gaming style design, you can even use it on your gaming website template. Info / Download Demo Calendar By Abram If you want a calendar that shows both date and time, this calendar concept might impress you. Since it is a concept model, you don't have the option to navigate through the calendar, add reminders, and stuffs like that. Fifteen cells are used in this calendar, twelve cells are for the months, one is for the year, another is to show present-day date, and one is for analog clock. This calendar is developed based in the Wim Crouwel's design. Therefore, you can use this code straightaway in your project, and can save you time. This one is also made purely using the CSS3 and HTML5 script. You don't get the option to add events, as you see in the Simple Calendar concept mentioned above. Info / Download Demo Circular Calendar Display is an intriguing calendar concept that shows both time and date. The month, year, and the main calendar is treated as a separate element. Present day date and details are shown on the big left side window. Take a look at our tooltips CSS design collection for more interactive designs. You can add a badge at the top of the date if you need to show the number of entries in the calendar. Info / Download Demo Calendar By Ray This is a minimalist calendar with subtle animation effects. Info / Download Demo Dice Calendar Dice Calendar is another interesting CSS calendar design like the circular calendar mentioned above. For each day you can show some beautiful images and greet visitors with a surprise. To make this beautifully animated calendar concept, the creator has used both CSS3 and Javascript frameworks. You have work on the interactive effects and options by your self. The circles are used only to highlight the selected dates, so you get a normal clean-looking calendar in this case. Different color codes are used to group the entries. Info / Download Demo Round Calendar As the name implies, this calendar uses a circular design concept. Because of this straightforward approach, it can be used easily by the user. The creator of this calendar has directly shared you the code used to make this calendar. You can utilize the design and can create a complete calendar in no time. Dates are made bold when you hover over the number to let you know which date you are picking. You can use this calendar to get some navigation ideas. The creator of this calendar has used HTML and CSS framework, along with it a few lines of Javascript is also used for smooth animation. The dates with entries are highlighted using three-dimensional rings. Info / Download Demo As said before this is an artistic calendar that actually works. If you are making any unique calendars with special functionalities, these CSS calendar designs will inspire you with cool designs. The creator has used a lightbox method to show the calendar entry. These time-stamped geospatial data can be used to collaborate with other details for better data insight. Info / Download Demo Light & Dark Calendar Light & Dark Calendar is an outline of a mobile application. The use of timeline design in the calendar entry will help the user to easily see the upcoming events in a day. The idea of this calendar is to let you choose a set of date and a task to it. The calendar entries are shown on the left sidebar of the widget, the month and the weeks are arranged in separate lines and the year shown at the top left corner. This calendar design can be used as a part of an application or a separate application for people interested in weather and temperatures. But, we can adjust the code to add our own options. So you can easily work and see your results before using it in your project. But, you can edit the code and can add your own custom features. Though this calendar doesn't have any working functions, you can take the concept and can improvise it. If you are making any application related to meteorology or weather report, calendar like this will come in handy for you. The creator of this calendar has given you all the options in a perfect working condition from the front-end. At the top bar, you can see the day, the bottom tab shows the year, and the center part boldly shows the date. Calendar V19 A CSS calendar that neatly shows the event entries is given in this V19 template. Info / Download Demo Calendar In ReactJs If you are looking for a calendar application similar to the Google calendar, this one might satisfy your needs. The creator has given different colors for the pre-defined groups like — birthday, festivity, and important event. Most of the given elements work properly, so you can get a clear idea of the design. The entries of the day are shown in a separate screen so you needn't worry about the space constraints in this calendar design. This developer has also given you color codes to organize your event entries. Info / Download Demo SVG Season Calendar SVG season calendar, you can infer that this CSS calendar concept uses a season theme from its name itself. Calendars are also used as a part of other applications. By making a few optimizations to the design, you can use this calendar design for commercial websites and web applications. Consistent design quality and color pattern are followed throughout the design, which makes it one of the best well-executed CSS calendar concepts in this list. Because of this calendar's simple and compact design, fitting it in a widget-sized calendar will also be an easy job. The design itself looks very professional that you can easily implement on any type of website or application. Some might find the numbers on the calendar to be a little smaller than usual, but you can fix it easily by editing the included HTML and CSS script. The material design makes this calendar clean and trendy looking. The simple & flexible code structure of this design will make your customization job a lot simpler. Elements for navigation are given at appropriate positions, all you have to do is to make it functional. By keeping this design as a base you can create your own custom calendar design. The creator of this calendar has used only HTML and CSS codes to create it. To make the animation effect even more evident you can add time parameters to this calendar design. As Microsoft is always known for its professional software, the design it follows is also very professional and clean. The designer has given you only a basic design inspiration in this calendar. There are several elements, effects, and features in Fluent design. Since it is a digital calendar, the creator has given you widgets to see weather and also to compare weather for the whole week. The functionality of this calendar is simple, it shows the entries neatly within the widget and organizes the entries using color tags. As it uses Codepen environment, you can edit and see the results simultaneously. The entire code script used to make this design is shared on the CodePen editor. For a concept model, the creator has given a lot of working functionalities. A few lines of Javascript is also used in this calendar for smooth and clean animation. The clean, modern design of this concept first let the user pick the person they want and later then pick the date and time they prefer. The code structure of this template is neat, like its design, which makes this template a better option for the developers who like to customize a lot and add their own features into an element. The circular design of the calendar gives a futuristic look with cool effects. The code script is made flexible enough for you to easily edit and add the features you want. Since it has a place for that you can add the option if you need. To be more precise, this calendar is a more simplified version of the ReactJs calendar. By spending a few minutes, you can understand the code structure and can start playing with it on the CodePen editor. Info / Download Demo A Coder's Advent Calendar This one is a functional calendar design. The designer of this calendar has used only the visual elements. Speaking of email automation, take a look at our free email template collection to make a stunning email in no time. Info / Download Demo CSS Grid Calendar A clean material calendar design is given in this example. This calendar can show the events, but can't add an event, this might be something you need to add if you wish to use this calendar. Info / Download Demo CSS Grid Calendar CSS Grid calendar will be a perfect addition to dashboard applications. Info / Download Demo Simple Calendar Simple Calendar is almost a fully functional calendar template. But, you can edit the code and add the custom features by yourself. The overall design of this example is practical and can be applied easily on any website/application. You have to manually work on the features you want. Therefore, designs like this will keep your website or application future-proof. Sadly, the developer didn't give us the fully functional calendar, but we can work on it to make it complete. Smooth animation effects and arrows are used to navigate around the calendar. If you are a marketer, manager or creative people, applications like this will help you clearly organize your goals. Designers/developers looking for a minimal calendar will love this template. The creator has used gradient colors and shadow effects to highlight important elements. Or else you can let the user set an image for a particular day. If you are looking for a modern Aztec or Mayan type circular calendar, this calendar design will impress you. This calendar has plenty of space for improvement, based on your needs you can add your own features and options. Info / Download Demo Fluid Booking Form UX/UI This CSS calendar example will come in handy for those who are looking for a modern and intuitive calendar design for booking purposes. When it comes to smartphones there are only two major platforms iOS, and Android. Dates with entries are noted with a little dot. Overall, this Date and Time Picker is a complete design that you can use on any website and applications. You can take this outline and can use your own animation effects and features to make the calendar interactive. CSS calendars with unique animations are also collected in this list to help you make a lively design. Since this is an HTML template, you can try an infinite number of customizations by editing the code. Unfortunately, you don't get the option to set your own custom colors for your event. The entire code script is shared with you on the CodePen editor. The smooth circular rotation motion and separate bright colors for the date, day, and month make this CSS calendar concept easy to use. Info / Download Demo Tasks Events Apps Calendar Plan Tasks Events Apps Calendar Plan is also a mobile application calendar. The navigation between each date entries is smooth and clean, so the user doesn't have to wait for the entries to appear on the screen. As a result, you get an engaging calendar design that is lightweight and can be used easily on any part of the website/application. You can easily navigate through the months, plus, you can also add events in this calendar. Very basic level information is shown in this template's default design. Trendy bold fonts are used in this calendar which modern users will love. You can easily jump to previous and next years from the navigation option at the top left corner. Hence, the user can see the calendar entries neatly without leaving the main calendar. This calendar is primarily designed for heat maps, collected during different years. All the navigation options are given on the left sidebar. For basic functions these calendars are good, but when people need something extra, they have to go for other calendar applications. To avoid visual complexity, the creator has used column grids. Info / Download Demo Daily CSS Calendar Daily CSS Calendar is a trendy looking modern calendar. If you are making a calendar for productivity purposes, then chances are there that the calendar has to handle multiple entries in a day. The code used in this calendar is shared with you directly in Codepen environment. For example, you can use blue color for all your friends birthday and can even set a reminder based on location and can choose when you need to be notified. Info / Download Demo Planner In this CSS calendar example, the creator has given only the front-end design concept for a planner calendar design. The creator has utilized the CSS3 script's ability to produce natural-looking colors and smooth animations well in this template. Info / Download Demo Simple Calendar The creator of this calendar has made it a penny plain almanac with a very basic design. Since it is a concept design, the creator hasn't given us effective navigation options. At the top, you also have a search bar to let the user easily find the entries. Though it is a concept model, all basic functions work smoothly, as you would see in the final versions. As you can see, a tooltip design is also given to show a quick overview of the event. Coding of this calendar is kept very simple, you can use this idea and can build your own custom calendar. Hence, you can edit and visualize the results before using it on your website or application. Info / Download Demo Day 9 Calendar Day 9 Calendar is a combination of calendar and an analog clock. Light backgrounds and neat texts make this calendar easy to interact and also to read the contents. Bright colors are utilized smartly to indicate the start and end date of different events. If you wish to give a simple and elegant looking calendar with basic functionalities, this design will work perfectly. As you can see all the elements are kept in separate lines so that the user can easily navigate around the calendar. The billboard style flipping animation gives an interactive feel when the user hovers over it. Along with the basic calendar design, this one also gives you a snowy animated background to give an authentic experience. Shadow effects and transition effects are smooth and clean, thanks to the latest HTML5 and CSS3 framework. In the default design, the entire year is shown on one screen. Info / Download Demo Calendar V04 The V04 is an advanced CSS calendar that gives you the option to add entries. Every modern smart device like smartphones, computers, and even the latest smart home devices with a screen have their own calendar. A minimalist design approach is followed in this calendar so that the user can easily see the contents on it. To make this beautiful calendar, the developer has used HTML and CSS framework. Plus, the animations won't intrude in the calendar interactions. In some of the above-mentioned calendars, you will be having an impressive animation effect with proper navigation options. A welcome message is shown before the calendar loads, which is a thoughtful touch. Info / Download Demo Colorful Calendar Concept The creator of this calendar has used color palette like design for the weeks. The season animations at the top are short and sweet, so most users will find it attractive. To make this front-owl outline, the developer has used HTML5 and CSS3 script. If you are making a calendar for play school website or other education websites for kids, this calendar design will be a good fit. For adding an event to the calendar, you have to simply click on the date and start adding the event. Since this calendar different working functions, the code script is a bit complex. Info / Download Demo Circular Calendar Display Circular Calendar Display is a unique calendar. One of the biggest advantages of the Google calendar is you can edit several details to an event and add colors to organize them. This calendar design can be used as a widget or a separate calendar application. But, you can use this design for website widgets as well. So that the users can see the rolling dice animation when the time changes. Info / Download Demo D3.js Calendar Heatmap Calendars are not only used for event entries and scheduling but they are also used to index day to day statistical data. With cute animal art and stylish fonts, this calendar will get kids attention. A separate window is given on the left to show the calendar entries. Info / Download Demo Responsive Flexbox Calendar Responsive Flexbox Calendar is the best option for calendars in photography websites and photography applications. CSS Calendar Designs To Spark Your Creativity You can find CSS booking calendars, CSS calendar designs for apps, CSS calendar with time options, and a lot more in this list. The creator of the calendar has given you both light and dark version so that you can have a clear idea before using one in your project or mobile application. Animation effects are smooth and clean in this calendar and will give an interactive feel to your users. Info / Download Demo VueJS Calendar Component This type of calendar can be used in a web application. The creator of this calendar has given you a basic structure, from here you have to take it to the destination you like. Texts are made bold for easier interaction and readability. Info / Download Demo Calendar V10 The V10 calendar template has a pure CSS calendar widget design. You can edit the code, add the features you want, and can visualize it on the CodePen editor before taking it to your project — this saves you time and effort. Info / Download Demo Calendar Mobile App UI As the name implies, this calendar is made for mobile applications. Instead, the creator has followed a simple and straightforward design. Info / Download Demo Calendar Flip Animation Calendar Flip Animation as the name suggests this one has flip type animation. The only problem with this design is the rolling dice animation effect can't be seen often by the user. The creator of the calendar has given you a basic idea, by keeping this as a base you can start working on other features and components. No matter for what purpose you are making a calendar, there is an inspiration for you in this CSS calendar list. You can use this calendar as an inspiration since it lacks several features you can use it as such in your project. Info / Download Demo Event Calendar Widget Event Calendar Widget is a dark color simple calendar widget. The creator of this calendar not only allows you to add events and edit but also gave you the option to choose a color scheme for your calendar. You can display the dates, and the users can navigate to the next and the previous month using the navigation arrows. Different colors are used in this calendar to indicate the important dates. By making a few adjustments to the design, you can make this calendar a perfect option for all modern websites and applications. For example, the event range design shows the start and end date, and the modal window shows the multiple entries in a day with the timestamp so that the audience can clearly see each entry and their time. The only thing you might need to change is the month and week arrangement. Since it is a planner design, you have the option to add reminders to the calendar. As the name suggests, the whole design is based on Microsoft's fluid design language. By making a few optimizations this calendar can be used in your existing project. At the bottom of the left window, you have an

option to add an event. Two calendars are given in this calendar, one is for add entries and the other shows the monthly calendar. If you are a mobile application designer, take a look at our iPhone mockups to present your designs engagingly to your audience. The creator of this calendar has given you two tags to organize your entries. Instead of showing a hover window, this calendar flips to show the calendar entry. On the sidebar, you have space to add user profile image and name. Info / Download Demo Windows Fluent Design Calendar The Fluent design is Microsoft's own design language made for its computer, tablets, and Xbox interface. Since it is a concept model, the creator has concentrated only on the animation part. The designer of this calendar has given you a clear vision of a calendar's look and the possible options you can add. Info / Download Demo Wim Crouwel's Calendar Wim Crouwel is one of the best designers in making stunning artistic designs that actually work. You can use this type of calendars in your reservation pages of a website like a restaurant website and salon website. An ample amount of space is given for each cell so that you can show an overview of the calendar entries there itself. Info / Download Demo Calendar By Alex Oliver The developer Alex Oliver has given us a beautiful looking calendar that can work practically in the day to day usage. This one doesn't have a creative circular design concept as you have seen before. All the options given in this calendar are in perfect working condition and the visual effects are also smooth. The scope of this calendar design is endless, we can use our creativity and provide a unique experience to the user. The creator has used the top bar smartly to show the information on the date picked by the user. The creator of this calendar has given a separate element to compare the temperatures of the week. In iOS Fantastical calendar is great and its availability on Apple Watch and Mac devices makes it easy for the user to see their entries across all devices. The designer of this calendar has used two sides, one is for the calendar and the other is to show the calendar entries clearly. The separate window on the flip side gives complete detail of the event. The simple design of the calendar makes it a perfect option for multipurpose usage. If you like to make the slider even more engaging, take a look at our range slider design collection for fresh ideas. If you are making calendar skins, this design will impress your users. The developer has shared the entire code in the CodePen editor so that you can visualize the customizations before using it on your design. Since it is a concept model, the creator hasn't given any working feature or element. Still, you can't easily jump between different years and months using the default navigation option. Navigation arrows are placed at the top of the calendar widget for easier navigation. For example, if you are making a website template you can choose the first week for creating a rough layout, the second week for design finalization, and the third week for development. You can use different colors for each task. You can add your own tags and add colors to it to easily organize the calendar entries. Of course, adding all these factors into an application is a big job, but you can use this calendar to reduce your front-end work. By taking this design as inspiration you can develop your own calendar with more creative visual effects. As the name suggests, this calendar allows you to pick both date and time. Other than that this calendar has plenty of room for improvement and can handle it easily. Info / Download Demo Daily CSS Images Calendar Daily CSS Images Calendar is designed for kids. For example, if there is an upcoming event you can add the company logo on that day. This is a very basic CSS calendar, you have to work on it to add your features and options. The creator has used different geometrical shapes to present the calendar entries elegantly to the user. If you need you can add a new widget to add notes and events. The developer of the calendar doesn't give you any forms to add your event details; this might be one option which you must add. Speaking of season sales, take a look at our Shopify landing page themes collection for more interactive designs that could improve your sales. The only thing this calendar miss is the option to navigate between different years. So the user can easily choose the year and the month they need. Hover effects are used effectively to show useful options and add life to the design. If you are making web applications for scheduling and managing projects, calendar design like this will be very useful. Info / Download Demo Responsive calendar Responsive calendar is a colorful simple calendar. Info / Download Demo Calendar Widget II Calendar Widget II is a fully functional colorful calendar. Bold letters with tight spacing make this calendar different from other professional calendars. On the top of the calendar, you have the navigation arrows to jump between different months. As the name implies, the creator has used a rolling dice concept for this calendar. Hence, you can use any modern colors and animation effects in this calendar. This template's intuitive layout will help you show the event entries clearly to the audience. You can use this calendar as a widget in a computer or as a mobile application. Info / Download Demo Calendar Javascript Library Calendar Javascript Library is a very basic calendar with a proper navigation option. The designer of this calendar has used material design with flat colors. Again, you have to work on the code to make the tooltip work properly. Info / Download Demo Calendar V06 Those who want a colorful and lively CSS calendar will love this V06 template. Details of the event are shown in a separate window along with weather forecast and location detail. Default animation effects given in this calendar can also be customized as per your requirement. The minimal clean design of this calendar makes it a perfect option for all types of websites and mobile applications. If you are running a picture website like Pixabay, giving tools like this will build your audience base. The creator has used date range concept in this calendar, which makes this calendar stand aside from other CSS calendar designs in this post. Info / Download Demo Date and Time Picker This one is another booking and registration calendar concept. This calendar is treated as a computer application or widget.
