Diablo 2 single player character editor

Diablo 2 resurrected single player character editor.

Last updated on September 25, 2021 Assassin Build Guide Diablo 2 Resurrected Trapper Assassin. This is a leveling construction of the Beginner Killer that will take you comfortably through Normal, which is the first difficulty of D2. If you are looking for a Beginner Assassin Build, and are not sure where to start, then this Diablo 2 build guide is for you. Check out our Diablo 2 Best Builds for more builds for all classes. Trapper Assassin Building Levels Class: AssassinSkill Line Focus: Trap Skills Building Focus: DPSMain Attribute: Vitality Difficulty Level: NormalLevel: 1-40The Trapper Assassin uses fire traps to tackle multiple enemies simultaneously. Each trap laid on the ground will periodically attack all enemies within the range, allowing you to stay away in a safe position at all times. The trap you will use for this construction is called Wake of Fire. This trap periodically sets off triangular waves of fire that damage massively and pass through enemies. It is important to note that this Build guide is intended for the first level of difficulty (Normal) and up to about Lvl 40. You can still play through Nightmare with this construction, but there are much more efficient constructions at that point so I would recommend reactivating it into something else. If you are a new player I highly recommend you to save the respec you get by completing the first Den of Evil search. If you do, you'll be able to talk to Akara and respect your character in a different construction once you reach Nightmare Difficulty. Assassin Build Guide Stats | TrapperMost builds in Diablo 2 Resurrected have a Stat distribution that focuses on allocating enough points in Force to meet equipment requirements, enough Dexterity to reach max Block Chance, and then allocating everything else in Vitality to get as much Life as possible. And while this is true for most Constructions, it can be confusing to decide when you should assign these Attribute Points. LEVEL 40 ASSASSIN STATS STRENGTH 60 DEXTERITY 20 VITALITY 175 ENERGY 25Strength: Endurance is a requirement for most equipment pieces of the game. During the first game through, you want to have enough points for slot the best equipment for each act. Act I: 30 Force Act II: 45 Force Act III à V: 60 Force From here you should only assign points in Force if you find an item worth the investment. Otherwise, simply assign the points to Vitality. Dexterity: For most Dexterity Builds it is important to increase the possibility of blocking when using a shield. From the block The possibility is not so important at the beginning of the game, we do not allocate any points here. Vitality: All remaining points should be spent here. Increase vitality will greatly increase your health pool, which is essential to stay alive against large groups of enemies. Vitality also increases your Stamina, allowing you to run far beyond without having to rest. Energy: You do not need to assign points to energy. Assassin Build Guide Skills | TrapperWhile TrapperWhileTrapper Assassin will focus primarily on the Trap Tree to deal damage, but you will also spend some points in the Shadow Disciple Skill Tree to unlock the Burst of Speed Skill or some useful abilities.Wake of FireThis trap calls up a triangle-shaped fire wave that deals very high damage and penetrates through Mine. You can have up to 5 traps of any kind summoned at the same time, which means you ideally want to throw 5 Wake of Fire traps around each monster group.Burst of SpeedThis Spell increases both your Movement Speed and Attack Speed. Unlike other abilities, traps are not affected by the faster launch speed, but the launch speed is affected by the attack speed. This means that a higher attack speed means more traps placed in less time. The extra speed of movement provided by this ability is also very useful, allowing you to quickly travel across the map, or run in circles while enemies die in your traps.Shadow CoatThis ability covers the area in the dark, forcing all monsters to stop their attacks and throws unless they are in scrambling range. This completely rules out remote enemies. Also, lower the defenses of monsters and increase your own defense.Due to the incredible amount of damage inflicted by this construction, you won't need the Shadow Cloak in the early stages of the game, as you will kill anything before it has a chance to counterattack. But if you're dealing with remote enemies, don't hesitate to grab it first.FadingThis ability provides +All resistances and reduces the duration of the curse (this also affects sanctuaries). It also has a hidden physical endurance bonus which is great for increasing survival.The problem with Fade is that it cannot be active at the same time as Burst of Speed. You can still assign 1 point here, if you wish, and use it if you are struggling with a high area of elemental damage and have no Resistance.Skill Distribution For the skill distribution you will first want to maximize your Wake of Fire spell. Once you reach the maximum of Wake of Fire, you can then focus on Fire Blast to further increase its damage. Here's a guide on how to assign your skills LEVEL 40 ASSASSIN SKILLSÀ LevelÀ Points Spesi Skill 2-4 + Den of Evil PointÀ 4À Fire BlastÀ 5À 1À Artiglio MasteryÀ 6À Burst of SpeedÀ 12-28 +RadamentÀe ÀIs Lair and The Fallen Angel Points 20 Wake of Fire 29-40 12 Fire BlastThe idea is to use Fire Blast until you unlock Wake of Fire at level 12. Then continue to crank Wake of Fire to its fullest, and then pump Fire Blast to further increase Wake of Fire damage. Use Burst of Speed to increase your attack speed, which the speed with which you can release Wake of Fire Traps.Assassin Build Runewords |TrapperRunes is a special kind of socket object that not only provides unique properties, but can also be combined with other Rune to create what is called Runeword. Runewords can be formed by entering Rune in a specific order within some types ofThe object must be raretable normal, able to support the current word, and needs to have the same amount of sockets as they are needed. Note that some magical objects have taken up of them, but even if you put the runes in the right order the word RUNO will not be created and you will be lost essentially the runes, then make sure you use only normal raretÀ elements. While RuneWords are often indicated as End Game equipment, some of them can be realized very soon in Diablo 2 Resurrected, and should not be so difficult to come. If a base is missing, you can check with merchants as they often sell socketed objects, but make sure they are normal in rarity. RuneWords are the most reliable way to reorganize your character while advancing through the game, so I highly recommend you to take a look at the complete list on our wiki and periodically check the runes you have and the Rune words that you can achieve. Runes can be grown by doing the Counter Runs. The countess is a super unique monster that is located inside the forgotten tower in the act I. Every time you kill her always fall between 1 and 3 runes and their level will depend on the difficulty adjustment. Which Elemental equipment resistances are fundamental when trying to survive Diablo 2 Resurrected. Most enemies face elemental damage and have high resistances to mitigate a great percentage of this damage. For this reason, I highly recommend you to focus on pieces of equipment that provide + Resistances during normal difficulty the game. You can control the current resistances by opening the Stat menu and looking at the bottom of the menu. The cap resistors at + 75%, and ideally you want to maximize them when you are reaching the end of normal difficulty. Be sure to periodically check your equipment to balance them and get the highest possible. Since the loot is random, you won't have control over the equipment you get during the first game and even Mid-Stage other than creating RuneWords. That said, there are some general guidelines on the statistics that you should be looking over your items to make sure that your character is resized with increasing difficulty. Remember that the Trap launch speed is not affected by the launch speed faster (FCR), but rather by the increased speed of attack (IAS). This is very important when it comes to selecting which items to equip. HelmetNadir (runeword): NEFA Tír Runes à Lvl 13. This helmet provides a good amount of defense and +5 strength, allowing us to save some Stats during the early stages. Lore (runeword): Orta Sol Runes à Lvl 27. If you happen to meet a rune Sol, then you can use it to make this helmet Provides +1 to all abilities and + 30% lightning resistance. WEAPONLEAF (RUNEWORD): TIRà € "RAL RUNES à €" LVL 19. This Runeword provides +3 to Fire Skills which includes traps, greenying increasing output damage. It also provides a good quantity of defense, as well as + 33% of cold resistance. The Runes Required requests Being bred by the normal difficulty difficulties, so you should make a couple of races until you get a TIR and RAL Rune. Once done, make sure you talk to Akara to buy a 2 socket staff to create RuneWord.Spirit (RuneWord): TalÀ € ÀlthulÀ € ÀlortÀ € ÀlMN Runes LVL 25. This word Rune can be created both up Weapons shaking. Increase both your damage, thanks to its +2 to All Skills, both your defense, thanks to fast shot recovery, vitality and stolen life for stroke. Finding a 4-legged weapon can be a bit difficult, but you are looking for Crystal Swords, Longswords and Broadswords. If you happen to play at the level of the secret cow, if you find some of these weapons, you can get 4 sockets guaranteed by Larzuk by completing the siege in the mission of Harrogath.claws (magic and rare): the claws are exclusive to The killer is usually equipped with skills + killer or + traps. You can equip 1 claw by hand, allowing you to significantly increase outgoing damage. If you come across one of these that provides good statistics then is the perfect size for this building. This shield provides a huge impulse to resistances. If you can't find a Runa Ort, you can create a combining 3 ral at the inside of the cube horadricó.spirit (RuneWord): Domer ç à à à à à à à à à à € ç à à à € ç 'À »Ann Runes À« LVL 25. If you find Runes and four shield slots then spirit is a great option. This shield provides +2 to all abilities, and provides many defensive statistics as elemental resistors, fast shot recovery and vitality. armorstealth (RuneWord): RuneWord TalÀ € Àl LVL 17. This is by far the best armor you can Get soon. The fastest running speed works great with this build, while the resistance to poison and FHR (Faster Hit Recovery), which allows you to recover the control of your character first after each shot and offers you more survival. The FHR is very important, as it usually helps to avoid stunning when you are surrounded by enemies. Dialing these are gloves, we advise you to focus on defensive statistics such as life and resistances. Increased Attack Speed is another good mod you can find on gloves, but priority to defense with respect to the attack on these. Beltassicurati to exchange the belt as soon as you reach the act 2 for the maximum amount of potions. As for statistics, we advise you to focus on life and resistances. Some merchants could offer magical belts with lots of life on them, which are excellent option.StivallViti search for rushing / fastest walking speed on your boots, as well as resistances and life. The Execution / Walk speed is important to browse quickly through the map, so make sure you get it.Anellivuoi Look for rings that provide resistance and to the rings, you will want to find an amulet that provides life and/or resistances. An amulet with +Trap Skill can also be great to increase your damage. CharmsYou will find many Charms as you proceedthe game. While having it in your inventory is fantastic, they can easily occupy much space by limiting the amount of loot you collect. Try to focus on + Life, + Resistances and + MagicFind as these are the most important for your build. What is the mercenary to select and gears to USAK 2 mercenaries are the best choice for all builds due to their Paladin Auras and the capacity to equip polama weapons. Being able to use Polearms is very important, since many powerful rake can be created on them by providing various buffs or dowing enemies. You can recruit this mercenary from Greiz to Lut Cholein. When it comes to selecting an Aura, you would like to select the prayer mercenary found on normal difficulty. Aura prayer provides healing regeneration that allows you to survive longer without using potions. Once the nightmare difficulty is reached, you can rent a Holy freeze aura mercenary, which slows off enemies around you by providing great control of the crowd. You didn't have a lot of replacement equipment during the start of Diablo 2 Risen one, but you can equip it with any extra equipment you have or buy a Polero from a merchant. If you save runs, make sure you create an intuition (RuneWord) on a poloa, since this weapon provides you with aura meditation greatly increasing your mana regeneration, as well as increasing your mercenaries combat capacities. Corsess racing couple will give you many runes that will not only be useful for this build, but for any other character you could do. Make sure you save all the runes you find within your escort. If you have trouble finding a base for your racks, make sure you periodically check the merchants while they usually have good bases. The murderer is the only character who can open the chest chest the keys, so you don't have to worry about completing the keys when he plays like one. If you happen to find a good unique or set that you like don't hesitate to exchange it with your current march. I excluded all the unique articles fixed by this guide because there is no reliable way to acquire them in advance. As you personally like to run the belt with the columns of 2x healing potions and 2x mana potion columns, but it is also possible to add antidote potions or shading potions. The use of these potions not only treat their respective state effect, but also provides a +50 resistance to their corresponding elemental resistance. Equip a Runeword insurgency on your mercenary, you will be your main way to recover mana, then make sure you keep it alive using potions about him. To do what, press and hold Shift, and then right-click the potion you want If you are playing on the controller, hold the trigger to the left and press the appropriate button on the D-Pad.Stay tuned for more Diablo 2 build guides 2 and make sure you check our Wiki Resuscitated Diablo 2 for more information on the game! game! game!
