Sea of thieves pc error

sea of thieves is a video game of action-adventure where you can live pirate life as you always imagined: sailing on a ship, hunting treasure, and fighting with other pirates. However, many players did not enjoy the game properly because of constant crash that sometimes appears on startup and sometimes at random points during the gameplay. sea of thieves crashingluckily, users were able to come along with their own methods that can be used to solve the problem and you should definitely check them out below. Be sure to follow the instructions carefully to solve the problem! the list of possible causes that make sea of thieves crash on windows is too long and we decided to create a short list of the cause to look out. check it below to determine your scenario: old or bad drivers – the problem can be with the graphics card driver as it was the case for countless players. you can try to roll back or update it, but the currently installed one must go. Vertical synchronization – this option is used to stabilize the framerate, but often causes problems with various games and we recommend you disable it on your computer. version of the Internet Protocol 6 – internet connection using the ipv6 protocol is known for crashing the game and we highly recommend you disable this protocol for internet connection that you are actively using. audio problems – it is possible that some applications have taken over the audio devices that have causedinstability and crash. Disable the exclusive mode for the sound device should solve the problem. Antivirus is blocking the game – Some free antivirus tools have blocked some of the features of the game that caused instant crashes. Make sure to add an exception to the game or uninstall the antivirus in order to fix the problem. Windows Store cache – If the faulty status of the Windows Store cache is causing crashes, it can be restored using a simple command. Overclocking – Overclocking puts the GPU under a lot of pressure to perform better than usual and is often known for crashing the graphic driver. Stop overclocking and check if the game crashes again. Play without a Microsoft account – If you are trying to play the game without being registered in your Windows 10 PC with a Microsoft account, you should do it as soon as possible! If crashes began to happen after upgrading the video card driver in one way or another; the rollback of a previous version could be quite good until a new safer driver is released. You should also update the current graphic driver you are using to play the game if a new driver is available as new versions often aim to fix crash issues! Type "Device Manager" n the search bar next to the Start menu to open the Device Manager window. You can also use the Windows Key + R key combination to open the Run utility box. Type devmgmt.msc in the box and click OK or enter key. RunningManager Expand the "Display Adapters" section. This will show all the display drivers that your computer has installed at the moment. Update the Driver: right-click the view adapter you want to update and select "Uninstall the device". This will remove the adapter from the list and uninstall the graphic device. Click "OK" when asked to uninstall the driver. Uninstall the graphical driverNavigate to the graphics card manufacturer page to view the list of the available driver. Enter system information and click Search or Send. Choose the last, download it and run it from DownloadsNVIDIA – Search for drivers Follow the on-screen instructions to install the driver. Restart your computer and see if the problem is missing. Rolling Back the Driver: Click with the graphic driver you want to uninstall and select Properties. After opening the Properties window, move to the Driver tab and locate the Roll Return Driver. Removal of the graphic driver If the option is clinging, it means that the device probably has not been updated recently as it does not have backup files reminiscent of the old driver. If the option is available to click, do so and follow the on-screen instructions to proceed with rolling back the driver. Restart your computer and check if the crash still occurs while playing Sea of Thieves! Solution 2: Disable V-SyncV-Sync is an option that forces the framerate to synchronize with the update ratethe monitor, if possible. Although the option seems useful because the higher framerate will not be recorded from the screen, disabling it managed to get rid of the crash and solve the problem for many users. Look at this! Right-click the desktop on the blank side without icons and select the input of the NVIDIA Control Panel from the context menu that will appear. You can also double-click the NVIDIA icon in the system tray if you see it. NVIDIA Control panel can also be located in the Control Panel, passing to the view of large icons and identifying it. By opening the NVIDIAS Control Panel, please follow the 3D settings section in the navigation pane on the left, click Manage 3D settings on the navigation side on the left and navigate to the Settings ProgramClick on Add and make sure you navigate the PC for the executable that is used to launch Sea of Thieves (SoTGame.exe) It is in the following folder: C:\WindowsApps\Microsoft.SeaofThieves_2.75.5471.2_x64_8wekyb3d8bbwe\Athena\Binaries\UWP64Adding of a program in NVIDIA Control PanelDiscover settings for this section of the program, scroll down until you see Vertical SynApps Disable IPv6The IPv6 or Internet Protocol 6 version is often incompatible with some games and you should try to disable it for your defaultconnection (what you use most often). If you switch between Ethernet and Wi-Fi, for example, repeat the same process for both connections! Use the Windows + R key combination which should immediately bring the Run dialog box where you should write 'appwiz.cpl' in the bar and tap OK in order to open the Internet Connection element in the Control Panel. The same process can also be done by manually opening Control Panel. Interrupt the view by setting in the upper right section of the window at Category and click on Network and Internet at the top. Click the Network and Sharing Center button to start it. Try to locate the Edit adapter settings button in the menu on the left and click on it. Change adapter settings When the Internet connection window opens from one of these methods, double-click the active network adapter. Then click Properties and locate the Internet Protocol Entry Version 6 in the list. Disable the check box next to this item and click OK. Restart your computer to confirm changes and check if the problem occurs during the game. IPv6Solution 4 Disable: Disable the exclusive mode for your audio device If some applications have an exclusive priority on your sound devices, you could experience the system and instability of apps; including Sea of Thieves crash. Apps that may not be active at the moment may be in control of your speakers, causing the game crash audio. Check the steps below to solve this problemon the volume icon located in the task bar and choose the sounds If this icon is not in the taskbar, you can locate the sound settings by opening the Control Panel, passing the view to the Category and selecting Hardware and sound > Sound. Sound in Control PanelCheck to see if your speakers are enabled under the Playback Switch to this tab by clicking the top of the window and locate the device you are using. It should be located top and selected. Click it once and click the Properties button at the bottom right of the window. In the Properties window that opens, check under the device usage and set the option to use this device (active) if it was not already and apply the changes. Switch to the Advanced tab in the same property window and check in Exclusive mode. Deselect the boxes next to the option "Premere the application modes exclusive in sight". Also apply these changes by clicking OK and check if audio and video are now synchronizing when you open a video in your browser or computer. Solution 5: Add your game to the Exception ListSometimes antivirus tools fail to recognize the efforts of the game to connect to the Internet as harmless and the features of the game are often blocked by it. In order to prove to the antivirus that the game is harmless, you will have to add to its list of exceptions / exclusions! Open the antivirus user interface by double clicking on its icon in the system tray (right side of the Taskbar tobelow the window) or looking in the Start menu. The Exceptions or Exclusions setting is located at different points than different antivirus tools. You can often find it simply without much hassle, but here are some quick guides on how to find it in the most popular antivirus tools: Kaspersky Internet Security: Home > Settings > Added > Threats and conclusions > Exclusions > Specify trusted applications > Add. Added exclusion in KasperskyAVG: Home > Settings > Components > Web Shield > Exceptions. Avast AVG opening exceptions: Home > General > Exclusions. You will need to add the main executable of the game in the box that will appear that asks you to browse the folder. It should be in the same directory for all users:C:\WindowsApps\Microsoft.SeaofThieves_2.75.5471.2_x64_8wekyb3d8bbwe\Athena\Binaries\UWP64Check to see if you are now able to play the game without experiencing constant crashes. If it does not yet work, try restarting your computer and try again. The last step would be to uninstall the antivirus and try a different one if the problem persists. Solution 6: Run the useful command 'wsreset' If the Windows Store cache has grown bigger than normal or if it has been damaged, make sure to reset it with this simple command. Restoring the cache usually solves several problems because they are caused when the Store is used overly and its cache becomes bigger than usual. This can cause problems with any ofapplications, including the game Sea of Thieves. Click the Start button and type the "wsreset" command. As soon as you type this, the first top result should be "wsreset – Run command". Run the 'wsreset'Click on this to restore the store cache. Restart your computer to apply these changes and try to reopen the game to see if the crash problem persists! Solution 7: Stop overclocking the GPU The error often appears when users exceed GPUs. Overclocking is a thing where users alter the maximum frequency of central processor graphics to a value that is higher than the one recommended by the GPU manufacturer. This can give your PC a significant benefit of performance and speed while playing video games and improving in all ways. The return of the processor frequency to its original state depends on which software you used to overclock it first. Stop overloading the GPU and check if the problem persists. Solution 8: Add permissions to the WindowsApps folder If the Windows Applications folder does not have the appropriate permissions, all applications and games are under the crash risk, including the sea of thieves. Make sure to follow the steps below to recover all necessary permissions! Open your Input into your PC or open any folder on your computer and click This PC option from the left side menu. Go to the folder below. > > Hidden objects to reveal it. C:\Programof the WindowsApps folder Right-click the folder, click Properties, and then switch to security Click the Advanced button. The "Advanced Security Settings" window will be displayed. Here you need to stay in the Resign tab and click the Add button below. Click Select a main button at the top of the screen. Click the Advanced button at the bottom and click Find Now to view all users. Under Search Results, choose the ALL APPLICATION PACKAGES option before clicking the OKIn the Permission Entry window, choose Full Control under basic permissions and click OK Check to see if the crash problem still occurs when you play Sea of Thieves! Solution 9: Login with a Microsoft account This strange problem is related to your Microsoft account. It seems that crashes or failures are caused by the fact that you are trying to launch the game without having a Microsoft account set on your computer. Be sure to follow the steps below to access a Microsoft account! Use the Windows key + Key configuration to open Settings on your Windows PC. Alternatively, you can search "Settings" using the search bar located in the Taskbar or you can click the cog icon. Open Settings from the StartLocate menu and open the "Contact" section in the Settings Stay in the Info tab and click the Login with a Microsoft account instead button under the Information tab to prepareConfiguration. Login with a MicrosoftEnter account your Microsoft credentials on the screen that will be displayed and click Next. You may need to confirm your identity by email or your phone number. Finally, click the Switch button to set your Microsoft account. Check if the sea of thieves continues to crash! sea of thieves pc error. sea of thieves ashbeard error pc. sea of thieves strawberry beard error pc. sea of thieves alabaster beard error pc. sea of thieves lavenderbeard error pc. sea of thieves pc download error. avacadobeard error sea of thieves pc. sea of thieves light beige beard error pc
