

Continue

Android 12 is coming, and with it, Google's OS is getting a facelift. The Beta is available right now! Besides some gorgeous visual upgrades, there are many new features. Personalization is the core theme of the update—it is “designed for you”—and many of the new features are centered around providing a deeply personal experience to Android users. Some notable features are the redesigned systems spaces, a fully adaptable quick settings shade, and a user privacy dashboard. While not all of the new features have been revealed, and there may be dozens more, these are the ten best we'll see in Android 12. Android 12 will include one of the most significant design changes in its history called Material You. The colors, shapes, themes, animation, and just about everything related to the experience have been revamped. The result is a more expressive, dynamic, and personalized system. From more fluid animations to redesigned system spaces, Android has never looked or felt so good, emphasizing usability. You can personalize the wallpaper, lock screen, and minor elements in older versions, but it doesn't change much about the rest of the interface. Android 12 introduces something called Color Extraction, which will automatically capture dominant colors. When you apply wallpaper, it applies the same colors across the entire OS. The notification shade, volume controls, widgets, lock screen, and menus all change to match the primary color. Set a red wallpaper, and you'll see red everywhere. How cool is that? Don't worry, you should be able to disable the feature if you don't want to use it. In quick settings, usually, you see round icons. Android 12 will change it up, adding rectangular tiles with rounded edges. Tiles work like icons. A quick tap enables or disables functions, and a long press takes you to the related settings page. However, the tiles are bigger, so they can reveal more information. For icons that only show the title or name, the tiles will include more, like a list of WiFi networks available, nearby Bluetooth devices, and so on. The larger size means you see fewer options in the quick settings panel, only four tiles at a time. You can customize the order and place the most critical tiles first. They also follow color extraction settings. A new privacy dashboard will give you complete control over what information apps can access, what they can change, and more. You can revoke permissions right from the dashboard if you don't want shady apps accessing your camera or photos, no problem. New indicators will also appear in the status bar to let you know when apps use your device's microphone or camera. There are new toggles in the quick settings to disable these sensors altogether. Approximate location sharing is now offered to prevent apps from grabbing your exact location or address. There's also more transparency about collected data and how it's being used. Android 12 will be adding something called the Android Private Compute Core. It is a system processing tool that allows more private interactions. All processing for live caption, now playing, and smart reply functions, for example, will now be carried out on the device—no sending information out to the network. In short, it improves the local processing power of devices for privacy and security functions. The notification system in Android 12 is also getting some upgrades to usability and aesthetics. Animations will be cleaner and faster. Interacting with notifications will be snappier and should be more reliable. Google is doing away with “trampolines.” Trampolines are notifications that take a long time to load the resulting application, even after tapping them. Instead, they will take you to an app in seconds. This change will break some apps, like Pushbullet, which sends notifications that don't link to anything. Ever have problems trying to navigate your device with one hand? A new one-handed mode in Android 12 aims to be better. It works similar to the one-handed mode in iOS if you've ever seen it in action. After turning on the mode in settings, you can enable it by swiping down from anywhere at the bottom of the screen. Content at the top half of the screen will drop down, giving you better access to on-screen elements, like buttons and menus. Generally, system updates are delivered OTA, so you have to wait for your carrier to update and repackaging a release. However, Google is now adding Android Runtime as a module to Project Mainline in Android 12. That means you'll get some OS updates through Google Play packages instead of OTA. This update will significantly impact hotfixes and security patches, which can be pushed directly through the Play Store instead of waiting weeks or months for a traditional OTA update. If you've ever had to take several screenshots to capture a conversation thread or stitch multiple images together, you know how frustrating it can be. Android 12 may add scrolling screenshots, allowing you to capture more of the screen real estate in a single image. It's rumored but not confirmed yet. There are also new paintbrush and markup tools so you can add notations, Emojis, stickers, and other doodles to your screenshots. Samsung devices already include this, namely the Note lineup, but it's nice to see in native Android, too. Keeping in line with the visual and experience improvements, Android 12 will also include new system widgets. Some examples are a revamped weather widget to match the new visual enhancements, a conversation widget, and more. The widget selection menu is now a list, so there are more options on the screen at once. There's no official list of all the new widgets being added, even with the Beta available, but they are coming. Alongside the confirmed Android 12 new features are some other rumored changes we may or may not see when the update launches. To list a few: We may get AVIF image support, multi-channel audio with support for up to 24 channels, rich media content through the clipboard, optimizations for large display devices like tablets, and more. FAQ What is Android 12 called? Unlike most older versions, Android 12 doesn't have an alternate name. Google stopped giving nicknames to each Android version starting with Android 10. What is the Game Dashboard for Android 12? Game Dashboard for Android 12 allows users to record gameplay footage, monitor frames-per-second, and activate Do Not Disturb mode while gaming. Game Dashboard integrates with your Google Play Games account. What are Enhanced Notifications for Android 12? Enhanced Notifications for Android 12 is an improved version of the Adaptive Notifications features introduced in Android 10. To use Enhanced Notifications, go to Settings > Notifications > Enhanced Notifications. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Android Automotive is set to become the gold standard in a few years. If you're reading this article on a Nokia 3310, you probably don't know what Apple CarPlay and Android Auto are. These are software applications that display on the car's infotainment system. It essentially changed how we interact with vehicles by allowing us to seamlessly connect to the car with our smartphones. Google is now taking it one step further with Android Automotive, not to be confused with Android Auto. Android Automotive is an operating system installed in the infotainment system. In other words, it's the primary system running everything, including navigation, climate control settings, heated seats, and model-specific pages. It's already used in the Polestar 2, which is just one of the many highlights of the vehicle. Now, Android Automotive 12 has received a few exciting updates. Google Toyota The general idea is to create a standard within the automotive industry, and we're all for it. Various manufacturers try to emulate the usability of a smartphone, and it almost always fails. If you want a smartphone-like interface, make a deal with the people who have years worth of experience creating software for smartphones. The latest version of Android Automotive will be getting a bunch of new features. In addition to a refreshed overall appearance and launch page, there's also an SMS feature, and it will illuminate a small light in the corner to confirm that it's recording. This is useful during voice commands, so you know Google Assistant is listening. It will likely also be listening to your conversations for targeted ads, so if you ask your significant other what they want for Christmas, there's a good chance it will pop up on your Facebook newsfeed a day later to remind you. Ford Polestar CarBuzz Polestar While this is a bit creepy, it's also quite helpful. Once your car has its own profile and is connected, you can remotely deactivate the car and track it. Google also says it's possible to wipe all of your data from the car remotely, as this will likely be a significant concern to users. Google also says the Bluetooth experience has been enhanced, but the biggest news is a new split-screen interface available for wider screens. For example, it will likely allow you to display two main features at once, like navigation and a music player. Once the entire car is running the software, Android Automotive will also forward any relevant information to a car's head-up display. To date, only a handful of manufacturers use the technology. GM will use it in the new Hummer, and future Hondas will also be equipped with this interface. GMC GMC GMC Google Google After months of beta testing, the final release of Android 11 is here. This latest version of Google's operating system features quite a few exciting features for users. Here are the features you should care about. When Will My Phone Get Android 11? Google has already begun pushing Android 11 to Pixel smartphones. All Pixel devices starting from the Pixel 2 can download the over the air update right now. Go to Settings > System > Advanced > System Update and tap “Check for Update” to begin the upgrade process. In addition to the stable release for Pixel phones, several select devices from ASUS, OnePlus, Xiaomi, OPPO, Realme, and Samsung can try the Android 11 Beta. You can check XDA-Developer's website for more information. The stable release of Android 11 will likely hit newer high-end phones from Samsung and OnePlus first. You should expect the roll-out of Android 11 to take up to a year or longer, depending on the handset manufacturer. A New Dedicated Space for Messaging Notifications Messaging is one of the most common things people do with their smartphones, and Android 11 makes it easier to keep track of these apps. Notifications from messaging apps can appear in a new “Conversations” section in the notification shade. Android tries to identify which apps should be included in the “Conversations” section, but it's not perfect. At the time of writing, only a few apps, including Google's Messages app and Facebook Messenger, appear in this section. There's also no way to manually add an app to the “Conversations” section, but you can remove them. “Chat Heads” for More Apps Justin Duino / How-To Geek Back in 2013, Facebook Messenger introduced a feature called “Chat Heads.” Messages would appear as floating bubbles on the sides of the screen. These bubbles could expand and allow you to view and respond to a conversation on top of whatever is on your screen. Android 11 brings this same functionality to the system level. Any app can now enable chat heads-like “Bubbles.” You can turn a conversation into a “Bubble” from individual app notifications, which will keep it on top of other on-screen elements at all times. Not all messaging apps will have this feature, but it's easier for third-party developers to support it now. Revamped Media Controls Justin Duino / How-To Geek Android 11 includes revamped media controls, which now resides within the Quick Settings menu instead of the notification section. Compact (left), Expanded (right) Swiping down once reveals compact media controls, and swiping down again expands the interface. If you have multiple apps playing media, whether it's music or casting a video, you can swipe between the media controls. With supported apps, you can also quickly change where the media is playing. Tapping the Google Cast icon or the location that the audio is playing on will bring up a list of devices that you switch playback to. You can easily change the player without even opening the app. Justin Duino / How-To Geek Smart Home Controls in the Power Menu One of the most significant changes in Android 11 can be found in the power menu. This is a place where you don't typically spend a lot of time, but now Android is putting it to good use. Long-pressing the power button will open up the new power menu. Here, you can now add shortcuts and quick switches to control your smart home devices from any app on your phone that supports the feature. Justin Duino / How-To Geek For example, the Google Home app currently supports the feature. Any smart home devices that you've added to Google Home can be put in the power menu. The shortcut drastically reduces the time it takes to turn on or off smart devices and view Nest security cameras. The power menu also now shows credit and debit cards you've added to Google Pay. It's unclear if this menu must be open to use NFC payments or if you still only need to unlock the device. Built-in Screen Recording Justin Duino / How-To Geek Recording your screen is something that has required third-party apps for a long time. Finally, in Android 11, there is a built-in screen recorder. The screen recorder can be launched from the Quick Settings menu. You can choose to record audio and screen touches along with the video. If you record audio, you can even choose to record from the microphone, device audio, or both. Justin Duino / How-To Geek Screen recordings can be very useful for showing someone how to do something or recording a bug that you'd like to report. It's a small thing, but handy when you need it. Even Better Permission Restrictions for Apps Justin Duino / How-To Geek Privacy is a big deal, and Google is always adding tools to help protect your personal data. Android 10 added a few important permissions options, and now Android 11 is building on that. In addition to Android 10's “Allow only while using the app” for location access, you now can allow permission “Only This Time.” The new setting means you can allow the app to access your location, camera, or microphone one time only. The next time it wants to use those sensors, it will ask again. Google The next new permission option will protect you from apps you haven't used in a while. Android 11 will automatically reset the granted permissions for an app you haven't used recently. This will prevent apps from abusing permissions long after you've stopped using them. Google Android 11's Easter Egg The Android 11 Easter Egg is a throwback to Android 7.0 Nougat. You can get to the Easter Egg by going to Settings > About phone > Android version and then tapping on “Android Version” quickly until the below graphic appears. Justin Duino / How-To Geek The first part of the Easter Egg is a volume dial that stops at 10. If you take the dial from 1 to 10 three times, on the third attempt, it will go past 10 and reveal the “11” logo. The second part of the Easter Egg is where Android Nougat comes into play. Nougat included an elaborate cat-collecting game as the Easter Egg. When you take the dial to 11, you'll see a toast notification with a cat emoji at the bottom of your screen. This begins your cat-collecting journey. RELATED: How to Enable Android Nougat's Cat-Collecting Easter Egg The next step in the game is to attract cats. This takes place in Android 11's redesigned power menu. Long-press your phone's power button and then tap on the three-dots above the smart home controls section. From the menu that pops up, select “Add Controls.” Here, tap the “See Other Apps” option found near the bottom of the page. You can now add “Cat Controls,” which will add shortcuts to water, feed, and play with the cats. Tap the shortcuts to fill the water bubbler and food bowl and play with a toy. After a while, a cat will appear in the notifications, and you can tap it to add to your collection. It's a fun little game to play when you're bored.
