Dynamic parameters in crystal reports

Don't believe anything, no matter where you read it, or who said it, no matter if I said it, unless you agree with your reason and common sense. buddha the easiest way to do this is not to use the parameter directly in the selected criteria. instead bring the parameter into a formula where you can then evaluate the parameter, find or specific, or nothing, which means everything, using a if..then statement. use the results of that formula in the selection statement to make the final selection. There is a limit to the crystal dynamic parameters. the limit is 1000 items, which may not be enough if you need all your inventory items in a field of reporting selection criteria. here is how to change the limit: important: as with any changes to the registry – do it at your own risk and have a backup. incorrect changes can make your computer or applications unusable. crystal report 2011 1. create a HKEY_ HKEY_LOCAL_MACHINE\SOFTWARE\SAP BusinessObjects\Suite xi 4.0\Crystal Reports\DatabaseOptions\LOV. 2. add a string value "MaxRowsetRecords" and set the value to the maximum number of values you want for your report. For example, a value of 2000 will return to 2000 values at the lowest level of a cascade parameter. 3. after making changes to the registry, restart the service or application concerned as required. Note: the 64-bit operating system registry key is: HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\SAP BusinessObjects\Suite xi 4.0\CrystalstalHelp someone. I have a crystal report (cr) requiring an acct number. the main source of data of the report uses a sql view to take the input of the number acct and look for the information that needs to print on the report, including a number of internal id of the person. This number of ids of the internal person is also used as input to feed a parameter for a sub report whose source of data is another sql view (I had to change this view under reports). this under report has a record selection formula which says take the internal number of the id person derived from the main results of the report view and oarlo to search for the information under report. The report and subrelation work well and when I carry out the report, it only requires the number of acct. I copied the main report to a new report and copied the view of the sql sub report and reviewed it to pull all the same fields that are all visible in field explorer. I updated the data source on the sub report to be the new view / sql and drags you into all the same columns expected in field explorer. I also reviewed the parameter/record selection formula used by the sub report to make sure it is oando the new source of data sql/view for its formula. Now, when I run the main report adds a new prompt to ask for an internal number of id person that should have been able to recover using the results returned from the main report sql/view but for some reason it is not pulling this into. I don't know what else might be wrong. should not be required for the number of id of the internal person because the userI never know. 5 Modified on: Thu, 6 Sep, 2018 at 3:40 PM Ready empty. Empty list of values (LOV)The Dynamic parameter does not display any value. The dynamic parameter prompt has no value in the drop-down menu. When you update a report in Crystal Reports, or in SAP BI LaunchPad, the dynamic parameter does not display any list of values. (LOV) What are the reasons why a dynamic parameter has an empty list of values (LOV) in Crystal Reports, or in SAP BI LaunchPad? SAP Crystal Reports 2008SAP Crystal Reports 2011SAP Crystal Reports 2013SAP Crystal Reports 2016 SAP Business Enterprise Objects XI 3.1SAP Business Intelligence Platform 4.0SAP BusinessObjects Business Intelligence Platform 4.1SAP Business Objects Business Intelligence Platform 4.2In Crystal Reports, create a report out of any data source. Add a dynamic parameter to the report. Save the report on the SAP BusinessObjects repository. When you update the report in Crystal Reports, or in SAP BI LaunchPad, note that the dynamic parameter does not show any list of values. The list of values is empty. There are several reasons that cause a list of dynamic parameters of the values to be emptied. But first, find if the report is based out - A source of relational data, such as MS SQL Server, Oracle,; or - A universe; or - A source of SAP data, like a BEx query, or SAP ECC Since it will determine how the list of values is generated. For reports based on relational data sources For Relational-based reportssources, such as ms sql server, oracle, ms access,., the list of values for dynamic parameters is stored in business view objects stored in the businessobjects bi server sap repository. These objects are managed in the business view manager, which is part of the smart businessobjects client tools. we suggest to review the sap knowledge base article first: did you find it useful? Yes nosend unpleasant feedback could not be helpful. help us improve this article with your feedback. feedback. dynamic parameters in crystal reports 2011. difference between static and dynamic parameters in crystal reports. how to use dynamic parameters in crystal reports. static vs. dynamic parameters in crystal reports. how to create dynamic parameters in crystal reports. static and dynamic parameters in crystal reports. dynamic cascading parameters in crystal reports
