Create table

The database data types are very simple, for instance we will use: *text, varchar, integer, float, numeric, date, time, timestamp, blob, boolean*, and so on.

1.In general, any well-formed SQL action command (insert, delete, update, create, drop, alter, etc.) could be framed inside an **execSQL(...)** method.

2.You should make the call to **execSQL**inside of a try-catch-finally block. Be aware of potential **SQLiteException**situations thrown by the method.

The second image is the result of clicking on the ActionBar menu option ^ a new record as shown ^ below. A we will discuss the other instance values when we jump to the coding part^ n.Updating record in Android SQLite database tableThe following excerpt shows how ^ can update a single record. Welcome to Android SQLite Example Tutorial. In an item in the list, click an attempt to open the ModifyCountryActivity class. The menu contains an item to add a new record from ActionBar. Below is ^ the final application ^ we will create today using Android SQLite database.Android SQLiteAndroid SQLite is a very lightweight database that comes with Android OS. We will have the option ^ alter the database schema to match the needs of the rest of the application^ n.SQLiteOpenHelper wraps these ^ to create and update a database according to our specifications. The third image shows an output when 3 records are added: The fourth image shows the output when any item in the list is clicked to modify or delete a record: The final image is the output when a record is deleted. The layout is then ^ defined for A@ fragment_emp_list.xml The xml layout and code of AddCountryActivity.java file are defined below:activity_add_record.xml Two editText components that take The entries for the paAs and currency together with a botA ^ n to add the values to the database and display it in the ListView view are defined.addcountryactivity.java package com.journaldev.sqlite; Import android.app.activity; Import Android.Content.Intent; Import Android.os.Bundle; Import android.view.view; Import android.view.view.OnClickListener; Import android.widget.button; Import android.widget.editText; Public class Addcountryactivity extends the activity Implements in ClickListener (^ n private AddTodobTn; PRIVATE ^ EDITTEXTETET; EditText Private DesceditCText; dbmanager dbmanager private; @Override Protected Void Oncreate (Bundle SavedInstancateState) {super.oncreate (SavedInstancestate); Settitle ("Add Record"); setContentview (r.layout.activity_add_record); SubjecteditText = (EditText) FindViewById (R.ID.Subject_EditText); DesceditText = (EditText ^ EDITTEXTETET; EditText Private DesceditCText; dbmanager dbmanager private; @Override Protected Void Oncreate (Bundle SavedInstancateState) {super.oncreate (SavedInstancestate); Settitle ("Add Record"); setContentview (r.layout.activity_add_record); SubjecteditText = (EditText) FindViewById (R.ID.Subject_EditText); DesceditText = (EditText ^ EDITTEXTETET; EditText Private DesceditCText; dbmanager dbmanager private; addtodobtn = (botA ^ n FindViewById (r.id.add_record); dbmanager = new dbmanager (this); dbmanager.open addtodobtn.setonclicklistener (this); }. }. subjectEditText.getText().toString(); final String desc = descEditText.getText().toString(); dbManager.insert(name, desc); Intent main = new Intent(AddCountryActivity.this, CountryListActivity.class) .setFlags(Intent.FLAG_ACTIVITY_CLEAR_TOP); startActivity(principal); rupture; } } The CRUD operation performed here is to add a new record to the database.The xml layout and ^ of the ModifyCountryActivity.java file are defined ^ n:activity_modify_record.xml
