Inventory aging report in power bi

Hi,I'm trying figure out, how dynamicaly calculate inventory age to some date in the past.I want see in my report in January 2019 was inventory age 200 days, in February 228 days etc.I have table with all inventory transactions where is TransactionDate and DateOfReceipt so for each transaction I'm able calculate age as TransactionDate - DateOfReceiptIt's no problem calculate with weighted average inventory age to actual date, but problem (for me) is calculate it for previous periods and see inventory age trendfirst I'm trying calculate Maximum date (for calculated period) _01 DateMax = VAR MaxDate = CALCULATE(MAX('DateA'[DateA]); USERELATIONSHIP('DateA'[DateA]; DateB[DateB])) RETURNIF(MaxDate > TODAY(); TODAY(); MaxDate _02 TransactionAgeInDays = VAR TransactionAge = DATEDIFF(MIN(InventoryTransactions[DateOfReceipt]);InventoryTransactions[_01 DateMax];DAY)RETURN IF(TransactionAge > 0; TransactionAge; 0)Next _03 TransactionQuantityCumulated = IF (MIN ('DateA'[DateA])
