It will convert any type of video and audio files to another that can be more practical for use with different software, improve quality or make a smaller file which is easier to upload to the Internet or transfer to a portable device for use on another computer. The conversion process can sometimes launch some synchronization issues between audio and video that is to do with changing file type. Open the Any Video Converter software from your desktop by double clicking the icon. This will open a screen to convert files. From the drop-down menu select "video added". Browse your files and select the video you want to convert. Alternatively, drag and drop the file to the main screen of the software. Go to "Edit" on the Taskbar and click "Options" from the menu. Select "Video" from the tabs, the panel shows "Default Sync Factor". Scroll the cursor to increase the synchronization quality. The larger the number, the better the synchronization, however the video will take more time to convert. (See references 1). Click "ok" to close the window and apply the changes. Select the file type to convert the video from the drop-down menu on the right side of the main window. Click "Convert" to start conversion. The time needed to convert will depend on the length of the video and its file size. Select the output folderto access the converted and synchronized file. Alternatively, go to the document folder on your computer and select the folder titled "Any Video Converter" or the folder you may have previously set in an option when you downloaded the software. There are many audio file formats available for your computer, some of which are more popular than others. The most popular audio format today is MP3. MP3 files occupy less hard-drive space than other audio files and offer excellent sound quality. The reduced space that MP3 files take on the hard drive allows you to store millions of music files on your computer. If you have a music file in MP3 format you can listen to it on your computer or iPod [source: Britannica]. Many programs, including Windows Media Player, allows you to convert audio files to MP3.
