

Click to verify

You can find apps, games, and digital content for your device using the Google Play Store app. The Play Store app is pre-installed on Android devices that support Google Play, and can be downloaded on some Chromebooks. To use it, go to the Apps section and tap Google Play Store . The app will open and you can search and browse for content to download. If you're having trouble finding the Play Store app or opening, loading or downloading content in it, there could be several reasons. You can try troubleshooting these issues by looking at different topics such as I can't find the Play Store App, The Play Store doesn't open or load any content, Downloads from the Play Store don't work. If you forgot your password or username, or you're having trouble getting verification codes, follow some steps to recover your Google Account. Tips include that wrong guesses won't kick you out of the account recovery process, and there's no limit to how many times you can attempt to recover your account. There are also specific steps for recovering a child's password if they're under 13 (or the applicable age in your country), or for getting help with an account that's been hacked or hijacked.To use Find Hub on Android, you need a PIN, pattern, or password set up. This feature helps locate devices in high-traffic and low-traffic areas. If your device's battery runs out or is turned off, Find Hub can still pinpoint its location for several hours. You can choose to enable this feature only in high-traffic areas or everywhere. Make sure Bluetooth and Location are on when the phone shuts down. The Find Hub network relies on devices using Bluetooth to detect nearby items, which are then securely sent to the hub. Your Android devices do the same to help others find their offline items. When you have a PIN, pattern, or password set up, your device stores its encrypted recent locations. This way, you can find offline devices and accessories by signing in to your Google Account on android.com/find. To use Find Hub, install the Find Hub app, sign in, and create a 2-Step Verification backup code. This is crucial if you lose your primary Android device and want to lock or erase it remotely. You can also add previously connected headphones to Find Hub by opening Settings, tapping Connected devices, selecting the device, and enabling Find when disconnected. Remember, Bluetooth tracker tags are automatically added after pairing. For best results, use the Find Hub mobile app and make sure your tags are charged, especially for Ultra-wideband (UWB) precision finding. Keep in mind that UWB availability varies by tag and device models with Android 13 and up. If you're having issues with UWB, consult your tag manufacturer. You can also remove accessories from Find Hub as needed. To share your location with others, you can use the Find Hub app. First, grant app location permissions to display a blue dot on your map and calculate friends' distance from you. You can start a share by tapping Start share, where you can choose your recipient, duration, and other details. For example, you can choose to share your location for one hour or until the end of the day. If you want to share with multiple people, you can select them from your recipients list using the suggested list. You can also search for specific contacts within this list. Once you've selected your recipient, you can tap Get link to share, which opens up a way to choose commonly used apps, message threads, and other groups to send the link with. Anyone with the link can see your location and other personal information. Manage Your Location Sharing Settings and Find Lost Devices with Find Hub To locate your device, consider using GPS: This method is accurate up to around 20 meters but may be less accurate inside buildings or underground due to signal interference. Wi-Fi networks nearby can also provide location information, while cell towers offer a range of several thousand meters. To set Google as your default search engine in Internet Explorer, follow these steps: Internet Explorer 11: 1. Open Internet Explorer. 2. At the top right, click the gear icon. 3. Click Manage add-ons. 4. On the left, under "Add-on Types," click Search Providers. 5. On the right, click Google Search. 6. At the bottom, click Set as default. Internet Explorer 10: 1. Open Internet Explorer. 2. In the top right corner of the page, click the gear icon. 3. Click Manage add-ons. 4. On the left side of the page, click Search Providers. 5. In the bottom left corner, click Find more providers. 6. Select Google. 7. Click Add to Internet Explorer. 8. Check the box next to "Make this my default search provider." 9. Click Add. Internet Explorer 9: 1. Open Internet Explorer. 2. In the top right corner of the browser, click the Tools icon. 3. Click Internet options. 4. In the General tab, find the "Search" section and click Settings. 5. Select Google. 6. Click Set as default. 7. Click Close. Internet Explorer 8: 1. Open Internet Explorer. 2. In the top right corner of your browser, click the down arrow in the search box. 3. Click Find More Providers. 4. Click Google. 5. Check the box next to "Make this my default search provider." 6. Click Manage Search Providers. 7. Click Add.
