The 7 forms of lightsaber combat

How do you learn the 7 forms of lightsaber combat. How many forms of lightsaber combat are there. What are the 7 lightsaber forms. Different forms of lightsaber combat. How to learn the 7 forms of lightsaber combat.

In the Star Wars saga, we see Jedi and Sith Lords using different fighting styles. Some of them are very offensive, others have unbreakable defenses, and others have agility and accuracy. As he learned from the Star Wars saga, there are seven forms of combat with light punishment. All forms differ from each other in their approach and tactics. It can take years to master the lightsaber fighting form. Every Jedi or Sith in the series has used at least one type of laser combat, with the exception of a few who learn more than one type. Let's talk about all types of laser lighting, their advantages, limitations and uses. I Form: Shii-cho's i form is the first form of the anti-Sarlacc laser, also known as form and detection path. The Sarlacc is a tattooed creature that lurks in the ground and waits for its prey. The same creature Boba Fett came out of the Boba Fett book. Due to the persistence of this form, it was called the same as this creature, "Sarlak's Path". With this new invention, laser cables can be cut from all angles, unlike metal swords, which can only be cut in one direction. Shii-Choi's limits were limited to basic attacks and defensive moves. Like primitive metal swords, the Shii-cho form only offers other laser lighting strikes and basic blocks. Shii-cho's invention helped the Jedi eliminate several opponents. Shii-cho was created to disarm, not just cut weapons and kill opponents. Initially limited, Shii-cho's invention proved to be very effective. Great, but shouldn't have kept it that way forever. The goal of the Jedi was to disarm the enemy in order to get rid of the war. Such situations led to the second inventionSome are very offensive, some have defended it ones and others focus on agility and precision. These combat styles derive from various forms of combat with the laser sword that have evolved over the centuries to overcome the imminent threats of the emerging lords of the Sith and the Jedi Dark. All forms differ from each other through approach and tactics. They can take years to master combat forms in a single creator of lights. Each Jedi or Sith has been seen using at least one form of combat with the laser sword during the series, with the exception of some which master more forms. We are talking about all forms of light, their advantages, their limits and those who used them. Form I: Form I of Shi-Cho is the first form of light brand battle, also known as Sarlacc form and type of detection. Sarlacc is a tattooed creature that hides in the ground and awaits its prey. The same creature Boba Fett has come out of the Boba Skett Book series. Due to the persistence of this form, like this creature, the Sarlacc path was called. The Jedi Council created Shi-Cho for the first time in the first days that followed the Sith Lords, and the Black Jedi began to appear in large numbers.

The Shi-Cho shape was born from the discovery of the very light pants which replaced the primitive metal swords. With this new invention, brilliant signs could cut from all angles, unlike metal swords that could only cut on one side. Shi-choi was limited to offensive and basic defensive movements. Like primitive metal swords, the Shi-Cho form offers only basic plans and parades by another light sign. I was lucky because it could easily cut any melee weapon like clubs, swords or similar weapons. The invention of Shi-choi helped the Jedi to defeat several opponents. Limits The invention of Shi-choi was initially very effective. This helped the Jedi to defeat their opponents and keep the Sith easily defeated. It was fantastic, but he would not have stayed forever. The Sith lords began to connect to the creators of light and over time, they master the Shi-Cho form.

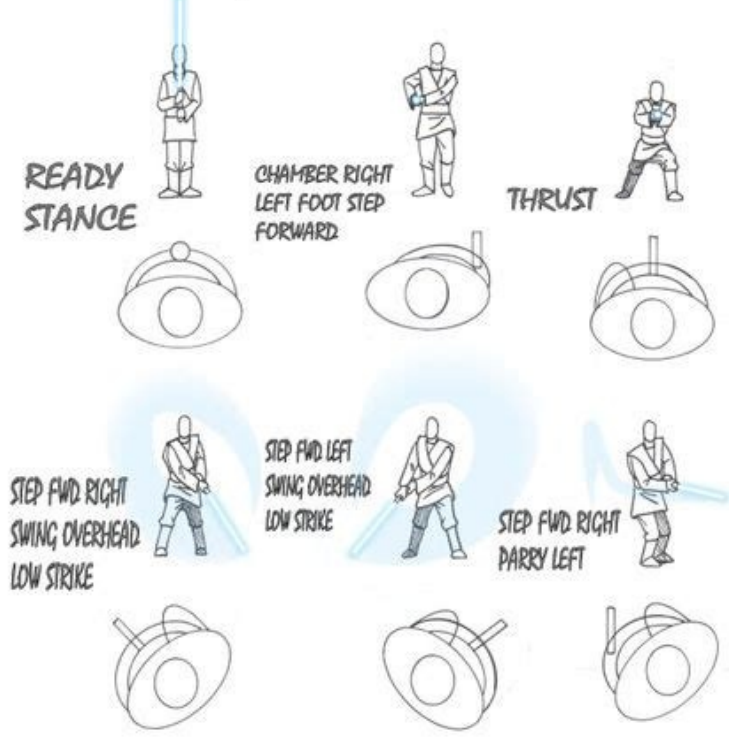

These situations led to the second inventionthe buoy. This form was more advanced and was better suited for fighting the Sword of Light. Who used Shii-cho? As other forms of grappling were invented, the Jedi became involved in these advanced forms and Shii-cho limited himself to training beginners. As seen in The Phantom Menace. Master Yoda taught the fighting forms of young shii-cho. Although Form I was simpler and simpler than other wrestling forms, the skilled master of this form could fight face to face with any other wrestling consumer. The first example is the fisto set. The other fist was skilled in the form of a Jedi, who fought in the Clone Wars. He almost defeated the Brave General, using the Wressing Mars I form. cho was not advanced and less used in light sword duels, but Jedi often use it in battles where it is impossible to win. He was told that if nothing helped, Shii-cho would. Name for name, you must remain decisive, even if it means relying on the basics of sword fighting. Form II: Makashi II in the form of a Sword of Light is called Makashi, also known as the Conflict Form and Ysalamiri Path. Ysalamiri was a lizard that could create a bubble of defensive strength to fend off powerful attacks. Respecting Ysalamiri's perseverance, the Jedi Order named Form II Ysalamiri. Makashi was invented in response to the failure of the Shu-Chii form, which was ineffective in Light Sword in sword duels. Makashi focuses more on sword counter. Light sword of any other form. It's an elegant form of grappling that takes a lot of practice. Unlike Shu-Chii, which is more reminiscent of savage shield slams, Makashi's form is built for precision and accurately affects opponents by glancing and disarming. Makashi is a technical form that requires quick reflexes and perfect legwork. Having this form, the Jedi learned to exert minimal effort to avoid sword attacks. The aim was to prevent clumsy strikes by Shiite consumers with minimal energy. Shu-Chii is mostly associated with random attacks, so Shu-Chii user gets tired of Makashi user blocking all attacks with one foot. Restrictions that Makashi was actually very effective at close range light sword combat and were only useful for a long time before new threats surfaced. It was only a matter of timeThe lords have acquired practical technological weapons to use at more distance. This time, competitors appeared with bullet weapons, such as Blastter balls and other fatal distance weapons, including Blastter balls and droids. Makashi was influenced by hand against the war against another laser lighting, but not adequately developed for long -range attacks. While Galaxy technology developed significantly, Makashi has proven that the beam sword was insufficient and unreliable. Jedi tried to block Blastter balls with lasers. Therefore, this need gave birth to the third form of the ray sword and was not a priority form for Makashi Jedis. Like Shii-chu, Makashi was limited to several students. Makashi is the Count Dooku, also known as Dark Tyranne, who uses a famous name of the Form II of the ray sword in Makashi. He was initially president of the separatist army, a separatist Jedi. It was later turned out that he turned to the dark side and worked as an apprentice in Dark Sidious. Count Dooku was a very talented user of a single standard laser branding makashi shape. We saw that it disarmed its competitors with minimum effort. During the Clone War, he easily rejected the nightmen and Assajj Ventress. Even against Obi-Wan and Anakin Skywalker, Count Dougu seemed to be under control without losing his sensitivity. Qui-Gon Jin, Padwan from Count Dooku, learned the form of Makashi and was quite competent. Likewise, Master Jedi Cin Draling deals with Makashi. Despite Makashi's limits to distance attacks, it continues to be one of the best forms of war with the sword of the beam and is considered extremely effective against Sith Lords. This form may not save you from a Blastter, but it can help you win against a strong Sith Lord. War III Figure: Soraresu is called the Soraresu, also known as the third form of war with the beam sword and the form of resistance. This is also called "Mynoko Yolu".

Creature Mynocks. Sorasu was created by the Jedi Council to avoid remote attacks. A true master of Soreresu becomes untouchable even for Blastic bullets. His aim was to create a defense shield with a beam sword that could prevent all bullet attacks. Makashi evolved by Form II, Soraresu, based on sensitivity and agility. Unlike Makashi, Soraresu is always used as a defense. Soraresu improves environmental surveillance and user reflexes. Sorasu initially aThis allows you to deal with flickering attacks in the fight against the Sword of Light bearer, but it has evolved to the point that they also deflect missiles. III form of fighting with a light sword, wounds, does not allow wild strikes or even a thorough cut, but using only a light sword to maximize defense to the maximum. The user serves himself, he trains himself and his reflexes more than an ordinary person. The ran Master is expected to draw the position of the Blastter before activating the bullet. It is said that an SES user can create up to 20 opponents due to their reflex and agility. Rosów users hold the blade close to their body and are able to bounce bullets from any direction. He keeps his body in this position to minimize the impact of each blaster at a distance. Restriction, while the shape of the wounds protected you from all sorts of ranged attacks, it wasn't invincible.

FORM 1 SHII CHO

PAGE 1

Makashi's form is to throw attacks with a light sword and find a place to attack. However, Soresu's form is complete and only dedicated to defense. As the quote says, attack is the best defense. It was able to protect wounds from bullets, but it was not effective against the offensive movement of the light sword. This limitation led to the creation of other forms of light sword to remove all wound faults. Who uses wounds is a form that allows maximum protection, but no attack. Similarly, in a world of advanced technology, you must learn wounds in order to survive blasters.

All Jedi learn wounds by combining other forms of combat with the light sword. From the first movie released in the 70s to the present, we have seen many films and series. It can be seen that all Jedi and Sith easily deflect bullets. Grandmaster Yoda and Obi-Wan Kenobis are popular names that control the shape of wounds. It may also have been a reason to survive order 66 when the others failed. It also deflected bullets from behind while others could not. Form IV: Ataru Ataru is the fourth form of light sword fighting, also known as the aggression form. The path of the hawk has also been invoked. Following an aggressive method of hunting to create. At the time form IV was developed, jeds were flown in battle light forms, unlike form I. At the beginning, forms and battle swords were not developed enough, and combat involved occasional candy bars and sewage.Back then, the Jedi had not properly learned the ways of the Force. Ataru is an advanced form of the 7 lightsaber battle forms that requires a combination of force abilities and lightsaber skills. In order to master Ataru's form, the Jedi had to learn the techniques of the Force. They were only able to master Ataru after they had mastered the basics of previous lightsaber combat forms. As the name "aggression form" suggests, Ataru has an attack form that allows him to continuously attack with his lightsaber until he finds a way out. An Ataru practitioner is expected to overwhelm the opponent with a series of lightsaber strikes and secure victory within minutes. Unlike Shii-Cho, Ataru's strikes are precise and continuous, leaving no opponent open. By combining Force abilities, the Ataru Cultivator can stay on the defensive and attack the enemy from unexpected directions. Uniform III is also required to properly master Atara. Soresu only allowed defense while Ataru blocked attacks with projectiles such as explosive projectiles, allowing the Jedi to get close to their opponents. The ability to quickly close in on the enemy with a combination of defense and offense helped the Jedi triumph for a long time. Limitations Indeed, Ataru, the fourth lightsaber combat type, was the most advanced of the previous lightsaber combat types. It was extremely effective against Sith and ranged attacks. However, it had its limitations. Learning how to quickly and continuously attack an opponent while completely blocking incoming attacks required intensive training. However, even combined with his Force abilities, Ataru could do little until his flaws were revealed. Ataru's attack was unique, but it was impossible to maintain the same defense when firing a lightsaber. The Jedi were able to dominate the battles, but only for a short time until they defeated the explosive projectiles. The Jedi Council couldn't risk fighting in the middle of the Jedi-Ataru war, so they started seeing new forms, which led to other forms. Who uses Atar?

IV lightsaber battles. His form, Ataru, was practiced by many Jedi and Sith Lords until the fall of the Jedi Order. As seen in The Phantom Menace. CuttingThe Dual Phase Light Sword was split in two and finally thrown out of the ship. Despite its limitations, Ataru is one of the most advanced lightsaber wielded by many great Jedi and Sith Lords. V Shape: Shaien & Djem also known as Shaien & Djem aka V shape aka durability. It was called the "Krayt Dragon Road" for him. Form IV was created to address the issue of delinquency in the previous form. Although Form IV presented the offence, it was not possible to stop the defense of the same. Another initiative was implemented to face this Soresu shape problem and resulted in the shape of V: Shien and Djem. Ataru was created to solve Soresesu's problem, but was created from scratch. However, Shaien & Djem brought out Soresesu (Form III) with some defensive changes. The V shape has two sides, Shien and DJEM. Shaien focuses on keeping the defense strong as soreses, focusing on DJEM's attack. Shaien and Jedi drove the explosives and accurately disrupted the bullets, where the opponents came and beat them with their cannons. Unlike Form III, which emphasized only defense, Shaien's philosophy was taken over by his rival's surprise attack. While Shaien was great for covering orbs for an opponent, he was designed with Makashi's mind (Uniform II) to gain the sensitivity of attacks against the laser sword wielder. Therefore, the other half, Djem, was Shien. «Form II was emphasized to be able to find the opening to block and make an accurate shot, focusing on fighting the opponent's head and dominating the defensive combination. Djems, so the GP has to go on the defensive and go back on the defensive. In V form, this is Soreus' defense and Makashi's sensitivity. The goal is to crush the enemy with some brutal violence and make him lose a vulnerable position. The Jedi Council promoted V form V through Soresesu or Makashi, because the mastery is very difficult to master Makashi mastery because Soresesu does not interfere. Shi-cho (Form I) and Ataru (Form IV) forced themselves aggressively. Soresesu (Form III) focused only on defense and patience and failed against Makashi (Form II). Shien and DJEM check all situations in this wayShien and Jam continued this expert defense and broke down in an aggressive way without revealing the hole. Who uses Shien and Jam? Anakin Skaker was a wonderful word that Shin and Jam worked like this. Although talented IV was at the Atara, this form was completely different. In Britannia's Rebels, it was seen that he had repeatedly misled the droids and even Ezra. Another famous name is Anakina Padavan Asoka Tano. Although he used double -lit dreams, he easily mastered in V shapes thanks to the reverse capture style. Many Shien and Jam experts used inverse grip to help defense and attack, and asoka were one of them. He used a single yellow-green beam sword to turn him upside down. Form VI: The sixth form of the Niman ray sword is called Niman, also known as the Rancor Road, the shape and form of diplomat moderation. Form VI Niman was a hybrid ray sword form that absorbed the entire form of the previous beam sword. It has various elements of all light swords from Shi-chu (I-form) to Shien (V-form). Niman had some advantages compared to other forms because they presented all the main elements of the previous forms in a single form without leaving any weakness. At the same time, there were no other surrogates that could not imagine any perfection. The idea was to provide a balanced approach to the Jedi during the war. The Jedi was not expected to be able to discover, but to protect and touch. Although the Jedi could master in all previous forms, they could not specialize in any special fighting form. Therefore, this form is also accepted as "AAA form for all transactions". In fact, Niman usually has a protective form derived from ulcers (Form III). The Jedi order, which combines the elements of Atara and Makashi, managed to carry out a rapid and unpredictable attack while maintaining the defense.

Niman restrictions throughout the ages have been the most practical form of energy for Niman consumers. Ironically, this is also the most critical form of limitation associated with it. Many Jeddie believed that it was responsible for preventing skills at any time in any previous way. The practitioner can protect himself as ulcers, but his protection is much weaker.

Unlike Makashi, his work is not perfect and his accuracy is boring. The crime does not offer so much brute forceAtaru and the landfill. But here it is a form of generalization, no specialization. Despite its limit, Niman has proven to be the most useful, especially for the performance combination used by Niman? Niman was the most common form of struggle to mark the light. The Jedi Command prioritized other forms than the Jedi and Republic ordinance diplomat supported. Secondly, Niman has spoken in any of the previous forms about Pro-level capabilities. The Jedi found it easier to fight the basics of all forms and some foundations that would help them. This way, Jedis can stay ready for all the unexpected events of the campaign.

Another reason for his acceptance is the combination of violence with Niman. The application of the basic physical elements of all previous forms in combat has not been drained as much energy as the special shape. This enabled Jedis to successfully combine electrical attacks such as "telekinesis" with Niman. The return, pull and push are more common in Niman than in other lightweight games. From the Breaking War to the Clone Wars, Niman was the most common form of light producers in combat. This is considered the most practical form of light Jedi gaming.

Similarly, Sith lords practiced this form as Jedi. The famous words of the Sith that have mastered the Niman form are darts Maul and grand inquisitor. Form VII: The Battle of Juyo Lightttsaber VII is called Juyo, also known as wild form. If his name was Voncroso Road vonkram who could feel powerful in other beings and force hunted. These force hunters were a precise description of Juyo practitioners. Form VII is the most demanding form of light combat. This is a bold form that includes direct attacks. Unlike "Atar" or "Mika", Juyo was based more on mental energy than physical energy. The user Juyo attacks his opponent in such perspectives and break behavior that his opponent makes his unpredictable moves. Juyo is a more physical and kinetic form that follows IV's ferocious force. Unlike Ataru, Juyo lacks the idea of defense and only aims to kill recordings like Shi-Cho. The created Jedi will release the mental pressure to promote itand rage during the battle. More than other forms, this emotional fuel increases the focus and energy of the user, but at the same time loses the moral compass. In other words, Juyo had the form to hurt people. "Anger leads to the dark side." Juyo was first adopted as a form of lightsaber combat. Juyo was later banished by the ancient Jedi Order because the form made its user vulnerable to the dark side.

Juyo was banned for centuries until Mace Windu made some changes. Form VII: Vaapad Mace Windu was a legendary Jedi Master and member of the Jedi Council. He was also considered more powerful than Master Yoda. Mace Windu modified the VII Juyo form and named this form Vaapad. Why did Juyo have to reform and what changes did Windu make? Well, after the ban, the Jedi only learned Juyo, but not the Sith Lord. Mace Windu was aware of the immense power Juyo made available to its users, and the Jedi were at a disadvantage compared to the Sith. Mace Windu corrected Juyo's form and made her safe for Jedi to study. Find a way to let your negative emotions flow without letting them spiral out of control. He practiced controlling his negative emotions. Ataru followed the same physical and mental tactics. Windu allowed his mental pressure to fuel his emotions to a safe limit in order to gain the immense power afforded by Form VII. Who uses Juyo and Vaapad?

In the ancient days of the Jedi Order, many Jedi used juu as a form of lightsaber combat. Vruk Lamar, Kavar, Zez-Kai El were famous Jedi masters who practiced juju. Unfortunately, most of these Jedi fell to the dark side, which resulted in Juyo's banishment from Juyo form by the Jedi Order. Although he learned niman, he also learned a form of juyo. Limitations As for its modified form, only Mace Windu was the only known practitioner of the Vaapad. This is partly because the Jedi became extinct after Order 66 and this form was extremely difficult to master. Letting negative emotions flow and controlling them was something not all Jedi could do easily. Mace Windu had students, but none of his apprentices, including Jedi Master Depp Billab, had ever been seen in Vaapad form. After Mace Windu and Depa Billaba were killed in the Great Jedi Purge, Vaapad, a modification of Juyo, becameJedi training is gone. Learning.
