I used it after I purchased it to charge my daughter's dead battery. After it was hooked up to the battery and turned on, my daughter turned the key in the ignition and her car started up without any hesitation. It has so many nice features; check your alternator, an air compressor and even a light if you're in the dark. I highly recommend it! The perfect station for all occasions. Send it with my daughter when she is out driving around in her vehicle. We also take it with us when towing our travel trailer out on camping trips. The price was right and it definitely checked a lot of boxes for our families' needs.Have kept one in my car since the 1980's for use when covering the ER at odd hours. Have given one to each family member and currently daughter using during the LA fires to keep her and neighbor's phones going. Also cheaper to keep tires at the right pressure.This is my second Fatmax jump pack. My first one still works but the handles on the ends broke off even with me being careful. This leaves the jumper cables unsecured and bo good place to grab the heavy device. There are smaller lighter options on the market that work just as well.Its heavy, loud when used to air up tires. The speed to add air to low tire was not as fast as I assumed it would be but was faster than other portable compressors. My teenage daughter was able to follow directions to jump start her car without assistance so it is easy to operate with clear directions on the unit.Air compressor stop working. Only had for about 6 months. Sensor on something cuts machine off early. Everything else still working fine. I have bought another one, and kept the other functions as it is. The air hose is poorly designed, very difficult to put back into out, cut my finger trying to shut door, don't think it would inflate 3 tires as claimed, jumper was weak and would barely turn over my lawn tractor.This doesn't come with a charger. The charger must be bought separately online or at some other store in order for it to work. Very impractical and inconvenient. I returned it.Returned never used because it does not come with a power cord to charge it up. The unit requires an extension cord to attach to the unit. The unit has the two prong end on the unit which I thought would pull out but it does not. I don't want to have to look for a cord every time it needs charging. Everything works, except for the compressor, sounds like a rock crusher. No air, will be returning it. I remember the days of being stranded on the side of the road with a dead car battery, frantically searching for someone to jump-start my vehicle. It was a hassle and a waste of time. But all that changed when I discovered the Stanley Fatmax 1000 Peak Amp Power Station. This portable power station has become my go-to solution for any unexpected emergencies or outdoor adventures. My daughter's vehicle recently had a flat tire and the hose on my old tire inflator was busted. I decided to head down to Sam's Club to see if they had a nice air compressor and was delighted to spot the Stanley Fatmax Jump Starter and Power Station that also included an air compressor. I bought the Fatmax, brought it home and started having some buyer's remorse once I started learning more about the unit. The bottom line is that the Fatmax Jump Starter from Sam's Club is an okay product at a decent price with some unfortunate drawbacks. Key Features The Fatmax has the following primary features: Jump Starter with 1200 available amps. Digital Air Compressor to 120 psi Four USB Ports Alternator Checker The model I bought at Sam's Club is pretty much identical to the Stanley Fatmax Power1 1000a sold at Walmart. The only difference that I could spot was that the jump starter on the Power1 1000a has a max power availability of 1000 amps compared to 1200 amps on this model. The Fatmax is powered by a lead acid battery that is charged by a plug located on the bottom left side of the front panel. How to Use I found two videos on YouTube that do a nice job of showing you how to use this unit. The first video shows how to use the air compressor on the unit to inflate a tire. Basically you attach the hose to the valve stem on your tire, select the compressor function and input the desired tire pressure. Once the tire reaches the desired pressure the unit shuts off automatically. The second video shows how to use the Fatmax Jump Starter function as well as how to perform an alternator check. The video is showing the Power1 1000a in use but the one from Sam's Club is identical in function. To use any of the four USB ports to charge your phone, etc simply plug in your devices and press the "USB Power On/OFF" button. What I Like and Don't Like There are pros and cons to this power station and overall it balances out to be an okay unit. Things I Like About the Power Station I absolutely love the digital tire inflator. The ability to dial in the tire pressure you want and not have to stand there watching a gauge is a wonderful feature. I also like that the unit has a bank of LED lights so you can work in the dark if needed. Additionally I appreciate the abundance of USB ports as it seems like we never have as many available as we need. Things I Do Not Like About the Power Station My biggest issue with this product is that it uses a lead acid battery instead of lithium. The use of a lead acid battery means that this charger is heavy, slow to charge and loses charge during storage. What is more, while the battery is being charge by the 120V plug on the base of the unit it cannot be used in the car compressor etc. What this means is that this unit would NOT be suitable to store in the trunk of your car for emergency use. The lead acid battery slowly uses charge through self discharge and you run the risk of the battery being dead after sitting in your trunk for 4-6 months. You also cannot charge or power this unit from the 12V DC port (cigarette lighter) on your car's console. This is a decent unit to store in your garage where it can be hooked up to a trickle charger but is not something I am going to stick in the back of my daughter's car for emergencies. The Stanley Jump Starter is a Sam's Club Value I bought this unit in the Sam's Club warehouse for \$89 (note, the sign says that this is the 1000A model even though the box does not). The same unit will cost you \$118 at Walmart and there is a stripped down version of this with no air compressor available online for \$171. Considering that I got a digital air compressor, jump starter and a few extra USB ports for less than \$100 I am satisfied with the purchase. That being said, I still need to go buy a portable air compressor for the back of my daughter's car.
