Welcome to this interactive simulator of hackers. Click on the corresponding icons to open applications or click the keyboard number. Put the windows with the mouse to place them on the table. How to prevent hacking? There are several simple things that you can do to prevent theft with a hack. You do not need to be an IT expert to perform some of these simple steps that can save time, disappointment and, possibly, even money. Update everything that you can ignore these contextual windows on your computer or phone, telling you that there is a new update. Remember that these updates are often an improvement in safety. When the developers find out that hackers have learned to access their software, they publish a safer update. Make sure you use the latest version by taking these invitations to update or activate the automatic update function, if it is available. Install antivirus and antelopal software, you may think that you do not need special software to ensure the safety of your computer and information, but this is so. Install the software for antivirus and anti-nomeological support in a well-known company and make sure that it will be in the know. Also configure it for regular analysis of the computer in searching for new malware. Use strong passwords and regularly change low passwords, facilitate the task of pirates. People often use slogans that are easy to understand or based on the name of an animal or loved one who is easily found on the Internet. Make sure that you have chosen that no one could guess and join the upper and lowercase letters, figurines and at least a symbol. Never use the same password on several websites. If anyone gets access to your password on a web site, he can access other accounts. Using authentication of authentication of two factors with two factors is a new amazing security function that too many people neglect. Many banks, for example, messages of messages and other websites, allow you to activate this function to prevent unauthorized access to your accounts. After entering the user's name, IThe site will send a code to your phone or email account. Then enter this code to access the page. Most sites give you the ability to remember the computer you use every day. But if someone tries to access your account from another computer, a stolen password isn't enough to overthrow them.

Delete and suspect that reliable companies will never ask you for your password via email. Family members rarely ask you to put money in an unknown position. If Mail EE looks strange to you, chances are it's malicious. Go ahead and delete. If you are unsure, contact the sender directly by phone to verify.

Protect the smartphone for many people who don't like the inconvenience of entering a PIN or password to use the smartphone. But it's worth it. If I lose my phone, without a PIN or password, the person who finds it can have access to your accounts, passwords and even payment information. Interactive programs Interactive programs can be opened using the icons on the right side of the screen. Try to interact with these programs, as most of them respond to your actions. Play bitcoin mining, watch a surveillance camera, crack a password, inspect a nuclear power plant, enter the Interpol database or find the best secret shops! Passive windows Press the number keys on the keyboard (0-9) to open passive windows. These programs display a static or animated window in the center of the screen. You can drag them with the mouse. Press the spacebar to close them. See an "Access Denied" or "Permission Granted" warning, start a self-destruct countdown, for example an animated neural network trace or a rain of matrix codes. Install a virus, download confidential data, track your computer's location using satellites, and more! Hacker Typer minimizes or closes all windows and starts pressing random keys on the keyboard to simulate a typing program. Typing hacker will add moreInstantly on screen for faster typing. Open Remote Relational Program to mimic trying to enter a secret government server. This automatic type of intrusion allows the server to respond and display various programs and alerts on the screen. Visit HTML online for a more detailed how-to guide! Find GeekPrank more jurors online! So what do other players think? I came up with a great blog article about the legendary Google Snake game, Broken!
