

I'm not a bot

I spent thousands on a separate machine to host a cluster, but now I'm stuck with a frustrating setup. I managed to get The Island up easily, but setting up Scorched was a nightmare. Clustering profiles kept causing problems, and even deleting them didn't solve the issue. After resetting several times, the command line won't start, and I'm left with a "stopped" status. Is it possible that too many profiles are the problem? I've tried using a VPN to access The Island, but it says "Server Not Responding." My Arris Router is involved, but I don't know how to completely uninstall Battlemetrics and Steam. I think this is part of the issue. Anyone can help me figure out what's going on and get my cluster up and running?
