Cloud Academy offers a wide range of video courses, quizzes and Hands-on Labs on different cloud computing areas. Our learning paths help you get from where you are to where you want to go. The Sol Arch-associated learning path is essentially your AWS Certified Solutions Architect – Associate Study Guide. Our Solutions Architect – Associate Learning Path contains all courses, laboratories and quizzes that you need to help you pass the AWS certification exam. Each type of content on the learning path serves a different educational purpose: Video courses provide guided lessons on the key areas of the exam, with examples. Hands-on Laboratories provide direct access to AWS services to help you put theory into practice. A preparation exam gives you the opportunity to evaluate your knowledge and availability before taking the real exam The Solutions Architect – Associate Learning Path focuses on 4 different domains, each with a percentage weighting in the exam: Design Resilient Architectures (30%) Design High-Performing Architectures (28%) Design Secure Applications and Architectures (24%) Design Cost-Optimized Architectures (18%) Using the learning pathAWS Certified Solutions Architect – Associated Study Guide includes understanding gaps in your knowledge. The Architect Solutions – Associate Learning Path is based on the AWS foundations to the most advanced areas. For the best approach, start at first with the first course and continue step by step. Complete all activities to ensure that you are familiar with many of the basic services that cover Compute, Storage, Database, Networking and Security. As you progress through the learning path, you will be presented with practical workshops to apply your knowledge you have learned from the courses. How long will it take? This is a natural question. Passing the exam requires you to be well prepared, and how long it takes depends on your level of experience and knowledge. On average, we recommend about 35-40 hours of preparation for the Solution Architect – Associate Exam, provided you have some AWS experience. This includes studying all your resources, including our Solutions Architect learning path and all other resources you choose. With full-time work and other commitments, investing 40 hours of study may take between 6 – 8 weeks. If you are completely new to AWS, we recommend about 50-60 hours or three months to prepare, allowing you to review some of the courses and laboratories more than once in areas you feel weaker. Where to focus your time How much Architect Solutions –Does the exam connect with your current or previous work experience? This will give you an idea of where to focus your time on learning new topics. We'll discuss some bases below. We start the study strategies that can be applied to any process as a cert learning path. Looking at the learning path itself. I want to subdivide the topics and service coverage for each domain so as to have an understanding of what to expect: Amazon Network Accesses & Supports AWS Global Infrastructure (Regions, Areas of Availability, Edge, Regions Bordo Cache) Multi-stage Architectures within a Virtual Private Cloud (VPC) Amazon Route 53 Amazon CloudFront Recovery and Corporate Continuity Strategy Architectures Structures Domains 2. Design High-Performance Architecture – 28% Auto-scalwith AWS WAF, Firewall Manager and Shield Understand AWS Recording mechanisms Audit, Monitor and Rate With AWS Config and AWS CloudTrail Data Encryption Using the AWS Key Management Service (KMS) Domain 4: Design Cost-Optimized Architectures – 18% AWS Storage Costs on Amazon S3, Glacier, EFS, Storage Gateway, AWS Backup Savings Plans and confidential instances for computing infrastructure Ultimately, where you decide to concentrate your time and how much time you spend depends on you. The best approach to our learning path is to immerse yourself deeply in any unknown territory and follow each step. Watch and concern videos (and post your questions as comments – we will reply!). Take your time in every Hands-on Lab to get comfortable with the different services in AWS. Finally, explore AWS documentation links in the content provided. We do not want to tell anyone to spend more or less time preparing for the exam. Therefore, you want to consider areas of expertise and how they refer to this certification. Finally, if you already have AWS experience, you can use 35-40 hours of study as a starting point and adjust your strategy from there. The best approach takes the best practices and advice from many sources and is adapted to fit your experience, goals and program. Good luck!
