Not so, I loved automatically recording all calls. That gave me the option of going back to the call to remind myself what was said in matters of importance. I was also hoping I could recover a couple of phone conversations with my late father. No recording recovery and I can't contact you to cancel. I just downloaded this call recorder app and recorded my stalker's phone call. He has been harrasing me for a quite some time and finally I had enough evidence to send him where he belongs. I want to really thank to the developer of this app, they literally saved my life, I wish I knew about this call recording app before. We are really happy to see that our app provides a real value and make your life easier. Please contact us via support@acrcallrecorder.co if you have any questions or feedback. BestACR Call Recorder Team I was so disappointed in this purchase. I had to record minutes on a zoom conference call for my new job. Following the instructions to record I called into the conference call audio only (did not use my computer for video). 19 minutes later I discovered nothing recorded/no sound. I had done about 3-4 practice/test calls and they worked fine. The only difference I can think of between the actual call and the practice/test calls is that I used the mute button during the actual call (did not want my Great Dane barking to be heard/recorded). If it worked I was going to purchase a year subscription. I would suggest purchasing a week just to try out because it's doubtful that they would issue a refund. Tried to reach out to customer service to no avail. The developer, Must Have Apps, indicated that the app's privacy practices may include handling of data as described below. While smartphones have made life simpler in most areas, this is one aspect in which they've gone backwards, since none of the leading mobile operating systems include a built-in call recorder. Perhaps one reason for this because recording calls treads murky legal waters - some countries (or states within countries) have laws against recording calls without the consent of all parties in the conversation.We're going to tell you how to record phone calls on your smartphone, but we strongly advise that you check whether this is legal in your region before you follow these steps. Needless to say, don't record calls if it is illegal. If you record calls, make sure that you tell the other person that the call is being recorded.Recording phone calls can be a privacy violation, but there are several positive use cases for it. It can be very useful when conducting phone interviews, when you're receiving complicated instructions that you can't note down, or when you'd like to store an intimate moment such as the first time parents speak to their child on the phone.Unfortunately for iPhone users, there's no straightforward way to record phone calls, but you can try apps like TapeACall that essentially work by creating a conference call between you, the person you are speaking to, and a third line that is used to record the call. Privacy aspects and the hassle of this aside, since it involves getting another call looped in, the service is available only in a few countries. Start your call and place it on speakerphone.3. With the second device nearby, record the call with the audio recording app. Related coverage from How To Do Everything: Tech:
