Tiotropium inhaler

What is this medicine?

TITROPIUM is an anticholinergic agent. It works by enlarging the airways to allow easier breathing.

Tiotropium is used to prevent bronchospasm (narrowing of the airways in the lungs) in people with bronchitis, emphysema, or COPD (chronic obstructive pulmonary disease).

What should I tell my health care provider before I take this medicine?

You should not use Tiotropium if you are allergic to tiotropium or ipratropium (Atrovent, Combivent, DuoNeb).

To make sure you can safely take Tiotropium, tell your doctor if you have any of these other conditions:

- narrow-angle glaucoma;
- kidney disease;
- enlarged prostate or urination problems; or
- if you are allergic to milk.

FDA pregnancy category C. It is not known whether Tiotropium is harmful to an unborn baby. Tell your doctor if you are pregnant or plan to become pregnant during treatment. It is not known if tiotropium passes into breast milk or if it could harm a nursing baby. Do not use Tiotropium without telling your doctor if you are breast-feeding a baby.

How should I take this medicine?

Use Tiotropium exactly as prescribed by your doctor. Do not use in larger or smaller amounts or for longer than recommended. Follow the directions on your prescription label.

Tiotropium is used to prevent bronchospasm attacks. Do not use this medication to treat a bronchospasm attack that has already begun. It will not work fast enough to reverse your symptoms. Use only a fast-acting inhalation medication to treat an attack.

Use Tiotropium regularly to get the most benefit. Get your prescription refilled before you run out of medicine completely.
