Pipe delimited excel spreadsheet

It is common and easy to convert a workbook to a CSV file for us. But how about saving an Excel as a pipe delimited file? This article will show you method of saving an Excel file as a pipe delimited file in details. Save an Excel file as pipe delimited file Save an Excel file as pipe delimited file To save an Excel workbook as a pipe delimited file, please do as follows: 1. Open the Control Panel on your computer. In the Control Panel window, please select Category from the View by drop-down list, then click the Clock, Language, and Region option as below screenshot shown. 2. In the Clock, Language, and Region window, click Region (or Region and Language) on the right side. See screenshot: 3. In the Region (or Region and Language) dialog box, click the Additional Settings... button as below screenshot shown. 4. Then the Customize Format dialog box is opening. Please remove the comma in the List separator box under the Numbers tab, then press the Shift + 1 keys together to enter the | delimiter into the List separator box, and finally click the OK button. See screenshot: 5. Click the OK button when it returns to the Region (or Region and Language) dialog box. 6. Open the workbook and shift to the worksheet you need to save as pipe delimited file, then click File > Save as > Browse. See screenshot: 7. In the Save As window, you need to: 7.1) Choose a folder to save your pipe delimiter file; 7.2) Name the file as you need in the File name box; 7.3) Select CSV (Comma delimited) from the Save as type drop-down list. 7.4) Click the Save button. See screenshot: 8. Then a prompt box pops up, please click the OK button. Now current worksheet is converted a pipe delimited file. If you want to save all sheets as pipe delimited files, please repeat the above step 6 to 8 to save them individually using a different file name for each. For checking the pipe delimited file, please right click it and select Open with > Notepad as below screenshot. Then you can see values are separated by pipe delimiter as below screenshot shown. If you're working with some awful corporate system that should have been retired in the dark ages, you might have had to produce a file from Excel with some weird delimiters other than comma or tab-delimited to import into the system. Here's the trick on how to do it. Naturally, this isn't the type of article that most people will need to use, hopefully ever—but if you do need to know how to do it, the solution isn't really obvious at first. Exporting Excel Files as Pipe Delimited For the purposes of this example, we'll use this silly little Excel file. To save the file as Delimited, you'll need to click the Office button and choose Save As -> Other Formats. Then select CSV (Comma delimited)(*.*csv) from the drop-down list, and give it a name. Now here's where the interesting part happens... Excel by default will use a comma as the delimiter, but if you open up Control Panel -> Region and Language, and then click the Additional settings button on the bottom.. Now look very closely at the "List separator" item, which normally has a comma in the field, but for the purposes of illustration I've switched it to a Pipe character. Once you hit Apply, and then save your Excel file, you'll notice that your file now has pipe characters as the delimiter. You'll probably want to change the List separator back to a comma just in case some other application needs it. Recently I was tasked to create a pipe delimited file from an Excel Spreadsheet, a simple task you would expect. On first glance it was not as simple I thought. I use Excel 2010 and was expecting to be able to do something like 'Save as' and select the file type 'CSV (Comma delimited)*.*csv' and then have the option to select the delimiter like when importing a csv file. After a little head scratching and a quick google, I found I had to make a global setting change in the control panel (Yes, that's right). So in Windows 7, I found you must do the following to change the delimiter: Make sure Excel is closed Navigate to control panel Select 'Region and Language' Click the 'Additional Settings' button Find the List separator and change it from a comma to your preferred delimiter such as a pipe (|). Click OK Click OK Exit Control panel Open the Excel file you want to export to a pipe delimited file Select File, Save As Change the 'Save as type' to 'CSV (Comma delimited)*.*csv' Change the name and file extension if you want, by default stays as csv even though a different delimiter Click Save Click OK Click Yes And that is it, easy right? Hmhhh – if you only wanted to change the delimiter once not an easy/simple process. Ok, it is not as bad as I make out. For example, if you want to have tab delimiter or fix width (space) there are save as file type options available, however, given how easy the import wizard is I would have thought they would have done something similar. Have I missed something or has google put me wrong? If so let me know... Barry, Preventer Of Chaos.
